

1	Electrochemical Power Sources: General Basics	1
	D. Berndt	
1.1	Introduction	1
1.2	The Electrochemical Cell	1
1.2.1	Potential of the Electrode	1
1.2.2	The Cell-Reaction	2
1.2.2.1	Example: The Lead-Acid-Accumulator	4
1.2.3	Power Storage Characteristics	5
1.3	Choice of feasible Systems	6
1.3.1	Electrolytes	7
1.3.2	The Reaction Process at the Interphase; Current-exchange Density	9
1.3.3	Solubility of the Reactions' Products, Passivation	10
1.4	Technically Realized Storage Systems	12
1.4.1	Discrepancy between Theoretical Values and Reality	12
1.4.2	Energy-Density	15
1.5	Problems of a secondary Reaction.	
	Example: Water-decomposition in the Lead/Acid-Accumulator	15
1.5.1	Values of Influence to Water Decomposition	19
1.5.2	Antimony Content of the Grids and Cyclic Durability	21
1.5.3	Other Causes for Loss of Water in the Lead-Acid Accumulator	21
1.5.4	Reduction of Water Losses	23
1.5.4.1	Valve Regulated Lead-Acid Accumulators (Batteries) with immobilized Electrolyte	24
1.6	Summary	27
2	Batteries for electrical powered Industrial Trucks	28
	H. A. Kiehne	
2.1	Introduction	28
2.2	Demands of the Market	28
2.3	Standardized Designs	30
2.4	Energy/Weight- and Energy/Volume-Ratios	38
2.5	Service-Life — Economy	41
2.6	Charging-Techniques	41
2.7	Maintenance	43
2.8	Summary and Outlook	44

2A	Power Supply Concepts for Driverless Industrial Trucks	46
	P. Preuß	
2A.1	Introductory Remarks on the Importance of Driverless Industrial Trucks	46
2A.2	The Load Placed on Drive Batteries by Driverless Industrial Trucks	48
2A.3	Traction Batteries for Driverless Industrial Trucks	50
2A.4	Optimization of Temperature as a Basic for a Concept of Power Supply (CPS)	50
2A.4.1	Considerations on Battery Dimensioning	51
2A.4.2	Estimating Battery Load Rating	53
2A.5	Notes on the Choice of Battery	54
2A.5.2	Maximum Permissible Temperature in Battery Systems	54
2A.5.3	Charging Requirements	55
2A.6	Development of a Concept of Power Supply	55
2A.6.1	Nature and Scope of Application Data	55
2A.6.2	Processing and Transformation of Application Data	58
2A.6.3	Comparison of System	62
2A.7	Current State of Charging Technology	63
2A.7.1	Methods of Control/Exchange of Information	63
2A.7.2	Practical Example	65
2A.8	Summary and Outlook	65
 3	 Batteries for Electric Road Vehicles	 67
	H. A. Kiehne	
3.1	Introduction	67
3.2	Energy and Raw Materials	69
3.3	Solution of the Range-problem	71
3.4	Battery-Requirements — Contributions to Solving the Problem	73
3.5	Are there real Alternatives to the Lead-Acid Systems?	76
3.6	Battery-Systems of the near Future?	79
3.7	High-Temperature Batteries, Fuel Cells?	80
3.8	Economy already today?	81
3.9	Outlook	82
 4	 Battery-powered Traction — the Users' Point of View	 83
	E. Middendorf	
4.1	General	83
4.2	The Users' Demands for the Battery	84
4.3	Operation of a Battery	86
4.4	Battery-Charging	90

4.4.1	Preconditions	90
4.4.1.1	Charging Currents	90
4.4.1.2	Temperature Limits	91
4.4.1.3	Fully Charging a Battery	91
4.4.1.4	Equalizing Charge	92
4.4.2	Charging Technique	92
4.4.2.1	Charging with declining Current to Wa-Characteristics (taper Charge Characteristics)	92
4.4.2.2	Charging with discontinuous declining Current to WOWa-characteristics	93
4.4.2.3	Charge-regulating Switch for Wa- and WOWa-Chargers	95
4.4.2.3.1	Charge-regulating Devices: Voltage dependant	95
4.4.2.3.2	Charge-regulating Devices; Current dependant	97
4.4.2.3.3	Charge-regulating Devices; Temperature dependant	97
4.4.2.4	Charging with constant Current – constant Voltage – constant Current to the IUa-characteristics	98
4.4.2.5	Charging with constant Current – constant Voltage to IU-characteristics	98
4.4.2.6	Batteries in parallel Charging	99
4.4.2.7	Combining Charging Procedures	101
4.4.2.8	Choice of the Charging Device	102
4.4.2.9	Battery Charging-rooms and Stations	103
4.5	Service and Maintenance of Batteries	103
4.5.1	Routine Servicing	104
4.5.1.1	Daily Servicing	104
4.5.1.2	Additional weekly Servicing	104
4.5.1.3	Additional monthly Service Work	107
4.5.1.4	Additional quarter-yearly Servicing	107
4.5.2	Peripheral Equipment	107
4.5.2.1	Catalyst-Plugs	107
4.5.2.2	Water-Refill Systems	108
4.6	Outlook	108
5	Battery Systems for backup Power Supply	110
	K. Boettger	
5.1	System Design and Examples of Use	110
5.2	Stabilisation of DC Load Voltage	114
5.2.1	Standby parallel Operation with reduced Load Voltage and Charging through Counter Cells	114
5.2.2	Voltage Control by DC Converter	116
5.2.3	Division of Battery into Stock Cells and Additional Cells	116
5.2.4	Standby Transfer with sectionalised Battery	117
5.2.5	Standby Transfer with Voltage Regulators of Overflow Diodes	117

5.2.6	Combinations	118
5.3	Battery Charging	118
5.4	Backup Power Supply Systems	120
5.5	Battery Selection and Sizing	122
5.6	Conversion Equipment in backup Power Supply Systems	125
5.7	Present Trends	131
6	Batteries for Stationary Power Supply	132
	H. Franke	
6.1	Introduction	132
6.2	Applications and Demands for Batteries	134
6.3	Cell-Construction and Variety of Types	136
6.3.1	Vented Cells	141
6.3.2	Valve Regulated Cells	142
6.4	Important Characteristics	144
6.4.1	Electric Data	144
6.4.2	Alloys	146
6.4.3	Comparison of Lead-Acid and Nickel-Cadmium Batteries	150
6.5	System Comparison	152
6.6	General Peripheral Devices	154
6.7	International Technical Constructions	157
6.8	Plans for the Future	159
7	An Example for Large-Scale Battery Application	162
	H. Krakowski	
7.1	Reliability of electric Mains-Power Supply	162
7.2	Dimensioning the Stand-by Power Supply of Telecommunications-Stations	164
7.3	Battery Plants	167
7.3.1	Stationary Lead-Acid Batteries, Vented Types	167
7.3.1.1	Installation of the Batteries	169
7.3.1.2	Battery Operation — Activation and Acceptance-Test	170
7.3.1.3	Battery-Inspection	173
7.3.1.4	Servicing Stationary Batteries	174
7.3.1.5	Health of the Personnel	176
7.3.2	Stationary Valve Regulated Maintenancefree Lead-Acid Batteries	176
7.3.2.1	Installation of the Batteries	177
7.3.2.2	Battery Operation	178
7.3.2.3	Inspection	178
7.3.3	Small Portable Maintenancefree Batteries	179
7.3.3.1	Installation of the Batteries	179

7.3.3.2	Battery Operation (Test Operation)	179
7.3.3.3	Inspection of the Batteries	180
7.4	Disposal of Used Batteries and Measures in the Case of Battery Damage	181
7.4.1	Stationary Lead-Acid Batteries	181
7.4.2	Small Portable Maintenancefree Batteries	181
7.4.3	Removal of Leakage-Acid from Battery-Ruptures	181
7.5	Summary	182
8	Automotive Starter Batteries G. Friedheim	183
8.1	Task and Function of a Starter Battery	183
8.2	Design and Construction	184
8.3	Optimisation of the Power-Density	186
8.4	Mechanical Properties	189
8.5	Maintenance-Free Starter Batteries	191
8.6	Testing	195
8.7	Tendencies for Development	200
8.8	Summary	202
9	High-Energy Batteries W. Fischer	204
9.1	Introduction	204
9.2	High Energy Battery Systems	206
9.2.1	The Zinc-Chlorine System	206
9.2.2	The Zinc Bromine System	207
9.2.3	The Sodium Sulphur System	210
9.2.4	The Lithium Iron Disulfide System	214
9.3	Fuel Cells	216
9.3.1	Low Temperature Fuel Cell Units	217
9.3.2	Middle Temperature Fuel Cell Units	218
9.3.3	High Temperature Fuel Cell Units	218
9.4	Applications	220

10.1	Introduction	224
10.2	Dimensioning a Solarelectric System	224
10.2.1	Preconditions for the Dimensioning	224
10.2.2	Calculation of the Mean Consumption	225
10.2.3	Calculation of the Mean Supply	226

10.2.4	Calculation of the Capacity	227
10.2.5	Evaluation of the Systems	229
10.3	Design of Solarelectric Systems	229
10.3.1	The Power-source: the Solar Generator	229
10.3.2	System Design	231
10.3.3	The isolating Diode	231
10.3.4	The Battery	231
10.3.5	The Operating System	232
10.4	Aspects for the Choice of an Accumulator	233
10.4.1	Power-Rating	233
10.4.2	Feasible Accumulator-types	233
10.4.3	Reflection on Application Technology	234
10.5	Designs of Operating Systems	234
10.5.1	Systems with Current-Limitation	234
10.5.2	System with Voltage-Limitation	234
10.5.3	Systems with two-step-Regulators	235
10.6	Costs of Solarelectric Power-Supply	239
10.6.1	Price-Basis – today and tomorrow – and its Effect	239
10.6.2	Prognosis for the System-costs per Watt Output	239
10.7	Summary	241

11 Charging Methods and Techniques

General Demand and Directions for Selection of Chargers 242

E. Wehrle

11.1	The Batteries' Demands for the Charger	242
11.2	Technical Data and Terms	242
11.2.1	Battery, Capacity, Discharge Current, Charge Current	242
11.2.2	Charge Coefficient	243
11.2.3	Charging Periods	243
11.2.4	Gassing Voltage	246
11.3	Characteristic Curves	246
11.3.1	Decreasing Characteristics (W-type)	248
11.3.2	Increasing Characteristics (S-type)	248
11.3.3	Limited Characteristics	248
11.3.4	Constant Characteristics	249
11.3.5	Assembled Characteristics	249
11.4	Employment of the Charging Methods uniquely for Charging Operation	249
11.4.1	Installation and Operation of Batteries and Chargers	249
11.4.2	Demands of vented Lead-acid Accumulators	249
11.4.3	Demands of the maintenance-free Lead-acid Battery	250
11.4.4	Demands of vented Nickel-Cadmium Batteries	250

11.4.5	Charging Lead-acid-Batteries according to the W-(Wa, WOW, WOWa)-type characteristic	250
11.4.5.1	Application	250
11.4.5.2	Basic Demands	250
11.4.5.3	Characteristic	250
11.4.5.4	Directions for Operation	253
11.4.6	Charging Lead-acid Batteries corresponding to I (Ia, IOI, IOIa)-characteristic	254
11.4.6.1	Application	254
11.4.6.2	Basic Demands	254
11.4.6.3	Characteristic	254
11.4.6.4	Directing for Operation	255
11.4.7	Charging of Lead-acid Accumulators according to IU-Ia-Characteristic	255
11.4.7.1	Application	255
11.4.7.2	Basic Demand	255
11.4.7.3	Characteristic	255
11.4.7.4	Directions for Operation	256
11.4.8	Charging according to IU-characteristic	256
11.4.8.1	Application	256
11.4.8.2	Basic Demand	257
11.4.8.3	Characteristic	257
11.4.8.4	Directions for Operation	257
11.4.9	Charging of Nickel-Cadmium-Batteries	258
11.4.9.1	Basic Demands	258
11.4.10	Charging of Nickel-Cadmium-Batteries to the I-(Ia)-characteristic	258
11.4.10.1	Application	258
11.4.10.2	Characteristic	259
11.4.10.3	Directions for Operation	259
11.4.11	Charging Nickel-Cadmium Batteries according to the W-(Wa)-characteristic	259
11.4.11.1	Application	259
11.4.11.2	Characteristic	259
11.4.11.3	Directions for Operation	260
11.4.12	Charging of NiCd-batteries according to the IU-characteristic	261
11.4.12.1	Application	261
11.4.12.2	Characteristic	261
11.4.12.3	Directions for Operation	261
11.4.13	Charging Valve regulated Lead-acid Batteries	261
11.4.13.1	Charging Methods	261
11.4.13.2	Charging Currents, Charging Periods	262
11.4.14	Charging Gastight Nickel-Cadmium Batteries	262
11.4.14.1	Charging Methods	262
11.4.14.2	Application	263

11.4.14.3	Charging Currents, Charging Periods	263
11.5	Comparison of some Charging Methods for Lead Batteries	264
11.6	Initial Installation-Cost of Charging Devices	265
11.7	Directions for the Selection of Chargers	267
12	Technical Aspect of Chargers and Current Transformers, Methods for Supervision	268
	G. Will	
12.1	Application of Charging Devices	268
12.2	Characteristic Voltages of Pb- and NiCd-Batteries	269
12.3	Construction and Function of Charging Devices	269
12.3.1	Controlled Charging Devices	269
12.3.2	Uncontrolled Chargers	275
12.4	Chargers for Traction Batteries and stationary Batteries in change-over Operation	276
12.5	Chargers for stationary Batteries in parallel Operation	277
12.6	Surveillance and Additional Devices	278
12.7	Harmonic Oscillation and Idle Power	281
12.8	Inverse Rectifier for ascertained Power-supply of Rotary-current consumers	285
