1	Introduction	1
1.1	One- and two-phase flow models in strong formulation	1
1.1.1	Navier-Stokes equations for one-phase flow	2
1.1.2	Navier-Stokes equations for two-phase flow	6
1.1.3	Two-phase flow with transport of a dissolved species	9
1.1.4	Two-phase flow with transport of a surfactant on the interface	10
1.1.5	Modeling of interfacial phenomena	12
1.2	Initial and boundary conditions	19
1.3	Examples of two-phase flow simulations	20
1.3.1	Numerical simulation of a rising droplet	22
1.3.2	Numerical simulation of a droplet with surfactant transport	24
1.4	Overview of numerical methods	26

Part I One-phase incompressible flows

2	Mathematical models	33
2.1	Introduction	33
2.2	Weak formulation	35
2.2.1	Function spaces	36
2.2.2	Oseen problem in weak formulation	39
2.2.3	Time dependent (Navier-)Stokes equations in weak formulation	42
3	Finite element discretization	51
3.1	Multilevel tetrahedral grid hierarchy	51
3.1.1	Multilevel triangulation	51
3.1.2	A multilevel refinement method	53

3.2	Hood-Taylor finite element spaces	60
3.2.1	Simplicial finite element spaces	60
3.2.2	Hood-Taylor finite element discretization of the Oseen problem	64
3.2.3	Matrix-vector representation of the discrete problem	66
3.2.4	Hood-Taylor semi-discretization of the non-stationary (Navier-)Stokes problem	67
3.3	Numerical experiments	73
3.3.1	Flow in a rectangular tube	73
3.3.2	Flow in a curved channel	74
3.4	Discussion and additional references	76
4	Time integration	83
4.1	Introduction	83
4.2	The θ -scheme for the Navier-Stokes problem	91
4.3	Fractional-step θ -scheme for the Navier-Stokes problem	94
4.4	Numerical experiments	95
4.5	Discussion and additional references	97
5	Iterative solvers	99
5.1	Linearization method	99
5.2	Iterative solvers for symmetric saddle point problems	101
5.2.1	Preconditioned MINRES	103
5.2.2	Inexact Uzawa method	109
5.3	Iterative Solvers for Oseen problems	116
5.4	Preconditioners	120
5.4.1	Introduction	120
5.4.2	Multigrid preconditioner	121
5.4.3	Preconditioners for the Schur complement	148
5.5	Numerical experiments	152
5.5.1	Stokes case	152
5.5.2	Oseen case	154
5.5.3	Navier-Stokes case	155
5.6	Discussion and additional references	155

Part II Two-phase incompressible flows

6	Mathematical model	161
6.1	Introduction	161
6.2	Interface representation	169
6.2.1	Explicit interface representation: interface tracking ...	169
6.2.2	Volume tracking based on the characteristic function	171

6.2.3	Volume tracking based on the level set function	177
6.2.4	Phase field representation	180
6.3	Weak formulation	191
7	Finite element discretization of two-phase flow model	197
7.1	Introduction	197
7.2	Discretization of the level set equation	197
7.2.1	Introduction to stabilization	198
7.2.2	Discretization of the level set equation by the streamline diffusion finite element method	201
7.3	Construction of an approximate interface Γ_h	205
7.3.1	Error in approximation of Γ by Γ_h	207
7.4	Corrections of the level set function	212
7.4.1	Re-initialization	212
7.4.2	Mass conservation	218
7.5	Numerical experiments with the level set equation	220
7.5.1	Discretization using the SDFEM	221
7.5.2	Re-initialization by the Fast Marching Method	226
7.6	Discretization of the surface tension functional	227
7.6.1	Treatment of general surface tension tensors	230
7.7	Analysis of the Laplace-Beltrami discretization	231
7.7.1	Preliminaries	231
7.7.2	Error bounds for discrete surface tension functionals	237
7.8	Numerical experiments with the Laplace-Beltrami discretization	242
7.9	XFEM discretization of the pressure	245
7.9.1	Approximation error for standard FE spaces	246
7.9.2	Extended finite element method (XFEM)	248
7.9.3	Modifications and implementation issues	251
7.9.4	Analysis of XFEM	254
7.9.5	Numerical experiment with XFEM	261
7.10	Numerical experiments for a Stokes problem	263
7.10.1	A stationary Stokes test problem	263
7.10.2	Test case A: Pressure jump at a planar interface	267
7.10.3	Test case B: Static droplet	271
7.11	Finite element discretization of two-phase flow problem	276
7.11.1	Spatial finite element discretization	276
7.11.2	Numerical experiment with a two-phase flow problem	279
8	Time integration	283
8.1	A generalized θ -scheme	283
8.1.1	Case I: $\mathbf{B}$ independent of time	283
8.1.2	Case II: $\mathbf{B}$ may depend on time	288

8.2	An implicit Euler method with decoupling	291
8.3	Numerical experiments	292
9	Iterative solvers	297
9.1	Decoupling and linearization	297
9.1.1	Numerical experiment	306
9.2	Iterative solvers for linear saddle point problems	308
9.2.1	Schur complement preconditioners	308
9.3	Numerical experiments	317
9.3.1	Stationary Stokes case	318
9.3.2	Generalized Stokes case	320

Part III Mass transport

10	Mathematical model	327
10.1	Introduction	327
10.2	Weak formulation: stationary interface	329
10.3	Weak formulation: non-stationary interface	333
10.3.1	Preliminaries	333
10.3.2	Space-time weak formulation	340
10.3.3	Well-posedness of the space-time weak formulation....	341
11	Finite element discretization	345
11.1	Nitsche-XFEM method	345
11.2	Analysis of the Nitsche-XFEM method	349
11.3	Time discretization	357
11.4	Numerical experiments	359
11.4.1	Test problems	359
11.4.2	Numerical results	360
11.5	Discretization in case of a non-stationary interface	364
11.5.1	Rothe's method combined with Nitsche-XFEM	365
11.5.2	Nitsche-XFEM space-time discretization	368
11.5.3	Numerical experiment: mass transport coupled with fluid dynamics	375

Part IV Surfactant transport

12	Mathematical model	385
12.1	Surfactant transport on a stationary interface	385
12.2	Surfactant transport on a non-stationary interface	387

13	Finite element methods for surfactant transport equations	391
13.1	Finite element methods based on Lagrangian interface tracking	392
13.2	Finite element methods based on Eulerian interface capturing	396
13.2.1	An extension-based Eulerian finite element method	397
13.2.2	Eulerian surface finite element method for a stationary interface	401
13.2.3	Numerical experiments	407
13.2.4	Discretization error analysis	412
13.2.5	Eulerian space-time surface finite element method for a non-stationary interface	422
13.2.6	Numerical experiments	428

Part V Appendix

14	Appendix A: Results from differential geometry	433
14.1	Results for a stationary surface	433
14.2	Results for an evolving surface	437
15	Appendix B: Variational formulations in Hilbert spaces	439
15.1	Variational problems and Galerkin discretization	439
15.2	Application to elliptic problems	441
15.3	Application to saddle point problems	443
15.4	A Strang lemma for saddle point problems	447
15.5	Schur complement preconditioning for parameter dependent saddle point problems	449
15.5.1	Preliminaries	449
15.5.2	Schur complement preconditioner	453
15.5.3	Application to a generalized Stokes equation	456
