## Preface

|                                                 |     |
|-------------------------------------------------|-----|
| 1 Introduction                                  | 9   |
| 2 A First Example                               | 11  |
| 3 A Notation to Describe the Syntax of Modula   | 14  |
| 4 Representation of Modula Programs             | 16  |
| 5 Statements and Expressions                    | 19  |
| 6 Control Structures                            | 22  |
| 7 Elementary Data Types                         | 28  |
| 8 Constant and Variable Declarations            | 36  |
| 9 The Data Structure Array                      | 37  |
| 10 Procedures                                   | 47  |
| 11 The Concept of Locality                      | 49  |
| 12 Parameters                                   | 51  |
| 13 Function Procedures                          | 54  |
| 14 Recursion                                    | 56  |
| 15 Type Declarations                            | 62  |
| 16 Enumeration Types                            | 64  |
| 17 Subrange Types                               | 65  |
| 18 Set Types                                    | 66  |
| 19 Record Types                                 | 68  |
| 20 Records with Variant Parts                   | 71  |
| 21 Dynamic Structures and Pointers              | 74  |
| 22 Procedure Types                              | 79  |
| 23 Modules                                      | 81  |
| 24 Definition and Implementation Parts          | 83  |
| 25 Program Decomposition into Modules           | 87  |
| 26 Local Modules                                | 94  |
| 27 Sequential Input and Output                  | 101 |
| 28 Screen-Oriented Input and Output             | 109 |
| 29 Low-Level Facilities                         | 119 |
| 30 Concurrent Processes and Coroutines          | 122 |
| 31 Device Handling, Concurrency, and Interrupts | 129 |
| Report on the Programming Language Modula-2     | 133 |
| Appendix 1: The Syntax of Modula-2              | 157 |
| Appendix 2: Standard Utility Modules            | 161 |
| Appendix 3: The ASCII Character Set             | 170 |
| Appendix 4: Syntax Diagrams                     | 171 |
| Index                                           | 181 |
