

Table of contents

Chapter I - REVIEW OF MULTIPLICITY THEORY	1
§ 1 The multiplicity symbol	1
§ 2 Hilbert functions	6
§ 3 Generalized multiplicities and Hilbert functions	10
§ 4 Reductions and integral closure of ideals	16
§ 5 Faithfully flat extensions	25
§ 6 Projection formula and criterion for multiplicity one	27
§ 7 Examples	34
Chapter II - $\mathbb{Z}$ -GRADED RINGS AND MODULES	44
§ 8 Associated graded rings and Rees algebras	44
§ 9 Dimension	49
§10 Homogeneous parameters	55
§11 Regular sequences on graded modules	68
§12 Review on blowing up	77
§13 Standard bases	88
§14 Examples	100
Appendix - Homogeneous subrings of a homogeneous ring	112
Chapter III - ASYMPTOTIC SEQUENCES AND QUASI-UNMIXED RINGS	117
§15 Auxiliary results on integral dependence of ideals ...	117
§16 Associated primes of the integral closure of powers of an ideal	122
§17 Asymptotic sequences	133
§18 Quasi-unmixed rings	137
§19 The theorem of Rees-Böger	146
Chapter IV - VARIOUS NOTIONS OF EQUIMULTIPLE AND PERMISSIBLE IDEALS	152
§20 Reinterpretation of the theorem of Rees-Böger	152
§21 Hironaka-Grothendieck homomorphism	159
§22 Projective normal flatness and numerical characterization of permissibility	166
§23 Hierarchy of equimultiplicity and permissibility	182
§24 Open conditions and transitivity properties	194

Chapter V - EQUIMULTIPLICITY AND COHEN-MACAULAY PROPERTY OF BLOWING UP RINGS	204
§25 Graded Cohen-Macaulay rings	205
§26 The case of hypersurfaces	212
§27 Transitivity of Cohen-Macaulayness of Rees rings	223
Appendix (K. Yamagishi and U. Orbanz) - Homogeneous domains of minimal multiplicity	230
Chapter VI - CERTAIN INEQUALITIES AND EQUALITIES OF HILBERT FUNCTIONS AND MULTIPLICITIES	240
§28 Hyperplane sections	240
§29 Quadratic transformations	243
§30 Semicontinuity	250
§31 Permissibility and blowing up of ideals	253
§32 Transversal ideals and flat families	258
Chapter VII - LOCAL COHOMOLOGY AND DUALITY OF GRADED RINGS	270
§33 Review on graded modules	270
§34 Matlis duality	289
Part I : Local case	289
Part II: Graded case	293
§35 Local cohomology	295
§36 Local duality for graded rings	310
Appendix - Characterization of local Gorenstein-rings by its injective dimension	320
Chapter VIII - GENERALIZED COHEN-MACAULAY RINGS AND BLOWING UP	326
§37 Finiteness of local cohomology	326
§38 Standard system of parameters	335
§39 The computation of local cohomology of generalized Cohen-Macaulay rings	350
§40 Blowing up of a standard system of parameters	353
§41 Standard ideals on Buchsbaum rings	367
§42 Examples	390

Chapter IX - APPLICATIONS OF LOCAL COHOMOLOGY TO THE COHEN-MACAULAY BEHAVIOUR OF BLOWING UP RINGS	397
§43 Generalized Cohen-Macaulay rings with respect to an ideal	397
§44 The Cohen-Macaulay property of Rees algebras	400
§45 Rees algebras of $\mathfrak{m}$ -primary ideals	404
§46 The Rees algebra of parameter ideals	415
§47 The Rees algebra of powers of parameter ideals	418
§48 Applications to rings of low multiplicity	421
Examples	422
Appendix (B. Moonen) - GEOMETRIC EQUIMULTIPLICITY	
INTRODUCTION	448
I. LOCAL COMPLEX ANALYTIC GEOMETRY	452
§ 1. Local analytic algebras	453
1.1. Formal power series	453
1.2. Convergent power series	454
1.3. Local analytic $\mathbf{k}$ -algebras	456
§ 2. Local Weierstraß Theory I: The Division Theorem	458
2.1. Ordering the monomials	458
2.2. Monomial ideals and leitideals	459
2.3. The Division Theorem	461
2.4. Division with respect to an ideal; standard bases	466
2.5. Applications of standard bases: the General Weierstraß Preparation Theorem and the Krull Intersection Theorem	467
2.6. The classical Weierstraß Theorems	468
§ 3. Complex spaces and the Equivalence Theorem	469
3.1. Complex spaces	470
3.2. Constructions in <u>cpl</u>	474
3.3. The Equivalence Theorem	477
3.4. The analytic spectrum	480
§ 4. Local Weierstraß Theory II: Finite morphisms	481
4.1. Finite morphisms	482
4.2. Weierstraß maps	482
4.3. The Finite Mapping Theorem	484
4.4. The Integrality Theorem	488
