

CONTENTS

1. Introduction	1
2. General Fundamentals of Surface Coordinates	10
2.1 Fundamentals of the Theory of Surfaces	10
2.1.1 Rudiments	10
2.1.2 First Fundamental Form	14
2.1.3 Covariant and Contravariant Bases	18
2.1.4 Equations of Gauss and Weingarten	23
2.1.5 Covariant Derivatives of Surface Vectors	26
2.1.6 Measures of the Curvature of Surface Curves and Surfaces	27
2.1.7 Normal and Principal Curvatures of Surfaces	30
2.1.8 Surface Curves with Given Geodesic Curvature	34
2.1.9 Geodesic Lines	35
2.1.10 Geodesic Surface Coordinates	41
2.1.11 Special Studies of Geodesic Polar Coordinates	48
2.1.12 Riemannian Normal Coordinates	52
2.1.13 Isothermal Surface Coordinates	54
2.1.14 Special Studies of Isothermal Surface Coordinates	58
2.2 Fundamentals of Complex Analysis	62
2.2.1 Preliminary Remarks	62
2.2.2 Functions of a Complex Variable	62
2.2.3 Differentiation and Integration of Analytic Functions	64
2.2.4 Power Series of Analytic Functions	65
3. Representing the Transformation Equations Between Surface Coordinates by Power Series	69
3.1 Constructing Surface Coordinates	69
3.2 Representing Power Series	70
3.3 Transformations Between Geodesic Polar Coordinates and Arbitrary Surface Coordinates	74
3.3.1 General Transformation Equations	74
3.3.2 Calculating Small Geodesic Triangles	81

3.4	Transformations Between Geodesic Parallel Coordinates and Arbitrary Surface Coordinates	86
3.4.1	Indirect Representation by Power Series	86
3.4.2	Direct Representation by Power Series	88
3.5	Transformations Between Isothermal Surface Coordinates and Arbitrary Surface Coordinates	92
3.5.1	General Transformation Equations	92
3.5.2	Transformations Between Two Isothermal Coordinate Systems	96
4.	Surface Coordinates on Ellipsoids of Revolution	99
4.1	Preliminary Remarks	99
4.2	Ellipsoids of Revolution and Their Representation Using Geographic Coordinates	99
4.3	Transformations Between Geodesic Polar Coordinates and Geographic Coordinates	106
4.3.1	Transforming the Coordinates	106
4.3.2	Transforming the Metric Tensor	112
4.3.3	Tangent Vectors and Azimuths of Geodesic r-Lines	114
4.3.4	Transformations Between the Arc Length of a Meridian and the Ellipsoidal Latitude	117
4.4	Transformations Between Soldner's Parallel Coordinates and Geographic Coordinates	120
4.4.1	Transforming the Coordinates	120
4.4.2	Transforming the Metric Tensor	124
4.4.3	Meridian Convergence	126
4.5	Defining Isothermal Surface Coordinates in the Geographic Coordinate System	128
4.6	Transformations Between Isothermal Geographic Coordinates and Geographic Coordinates	130
4.6.1	Preliminary Remarks	130
4.6.2	Isothermal Latitude	130
4.6.3	Isothermal Longitude	133
4.7	Transformations Between Gaussian Isothermal Coordinates and Geographic Coordinates	136
4.7.1	Directly Transforming the Coordinates	136
4.7.2	Indirectly Transforming the Coordinates	141

4.7.3	Transforming the Metric Tensor	142
4.7.4	Meridian Convergence	143
4.8	Transformations Between Gaussian Isothermal Coordinates and Geodesic Polar Coordinates	145
4.8.1	Directly Transforming the Coordinates	145
4.8.2	Tangent Vectors and Direction Angles of Geodesic r-Lines	151
4.8.3	Coordinate Transformation by Reducing Directions and Distances	153
4.9	Transformations Between Two Systems of Gaussian Isothermal Coordinates	155
4.9.1	Indirectly Transforming the Coordinates	155
4.9.2	Directly Transforming the Coordinates	156
4.10	Transformations Between Isothermal Stereographic Coordinates and Geographic Coordinates	160
4.10.1	Transforming the Coordinates	160
4.10.2	Transforming the Metric Tensor	165
5.	Three-Dimensional Coordinates	166
5.1	Preliminary Remarks	166
5.2	Fundamentals of Three-Dimensional Euclidean Geometry	169
5.2.1	Coordinate Transformations	169
5.2.2	Representing Transformations Between Three-Dimensional Curvilinear and Cartesian Coordinates by Power Series	173
5.2.3	Space Curves	177
5.3	Surface-Normal Coordinates	181
5.3.1	General Fundamentals	181
5.3.2	Representing Transformations Between Surface-Normal Coordinates and Cartesian Coordinates by Power Series	187
5.3.3	Transformations Between Three-Dimensional Polar Coordinates and Polar Coordinates on the Reference Surface	190
5.4	Geodetic Coordinates	197
5.4.1	Preliminary Remarks	197
5.4.2	Geographically Geodetic Coordinates	198

5.4.3	Gaussian Geodetic Coordinates	206
5.4.4	Transformations Between Ellipsoidal Polar Coordinates and Polar Coordinates on the Reference Ellipsoid	208
5.5	Transformations Between Geographically Geodetic Coordinates	212
5.5.1	Fundamentals	212
5.5.2	Transformations Between Concentrically Geodetic Coordinate Systems . . .	217
5.5.3	Transformations Between Arbitrary Geodetic Systems Based on Central Transformation Parameters .	220
5.5.4	Transformations Between Arbitrary Geodetic Systems Based on Local Transformation Parameters .	226
5.5.5	Determining Transformation Parameters	232
5.5.6	Determining Mean Reference Ellipsoids	237
	Bibliography	242
	Index	245
