

# Table of Contents

<b>1 Introduction</b>	1
<b>2 The Parametric Piecewise Representation</b>	3
2.1 The Parametric Representation	3
2.2 The Piecewise Representation	4
<b>3 The Application of Tension to a Curve</b>	5
3.1 Spline Under Tension	5
3.1.1 Explanation	5
3.1.2 Determining the Set of Values of the Second Derivative Vector	5
3.2 $\nu$ -Spline	6
3.2.1 Explanation	6
3.2.2 Determining the Set of Values of the First Derivative Vector	7
3.3 Tension Methods with Local Control	8
<b>4 Elementary Differential Geometry Concepts</b>	11
4.1 Unit Tangent Vector	11
4.2 The Principal Normal	12
4.3 The Osculating Plane and Osculating Circle	13
4.4 The Binormal	14
4.5 Curvature and Curvature Vector	14
4.5.1 Arc Length Parametrization	15
4.5.2 Arbitrary Parametrization – Geometric Form	16
4.5.3 Arbitrary Parametrization – Cross-product Form	18
4.5.4 Conditions for Zero Curvature Vector	19
<b>5 Fundamental Geometric Measures</b>	21
5.1 Continuity	21
5.2 The Unit Tangent Vector and Curvature Vector	21

<b>6 Geometric Continuity and Shape Parameters</b> .....	27
6.1 Unit Tangent Vector .....	27
6.2 Curvature Vector .....	27
<b>7 Derivation of the Beta-spline Curve Representation</b> .....	29
7.1 Control Polygon and Control Graph .....	29
7.2 Local Control .....	31
7.3 Explanation .....	32
7.4 Derivation of the Beta-spline Basis Functions .....	33
7.5 Convex Hull Property .....	40
<b>8 Curve Evaluation and Perturbation with Uniform Shape Parameters</b> ....	43
8.1 Evaluation Method I .....	43
8.2 Evaluation Method II .....	44
8.3 Comparison of Evaluation Methods I and II .....	46
8.4 Perturbation Due to the Movement of a Control Vertex .....	47
<b>9 Generalizing to Continuous Shape Parameters for Curves</b> .....	51
<b>10 Curve Evaluation and Perturbation with Continuous Shape Parameters</b> .....	53
10.1 Evaluation Method I .....	53
10.2 Evaluation Method II .....	55
10.3 Perturbation Due to the Movement of a Control Vertex .....	56
10.4 Perturbation Due to the Modification of Shape Parameters .....	58
<b>11 Classification and Analysis of Beta-spline Curve End Conditions</b> .....	59
11.1 Introduction .....	59
11.2 Classification .....	59
11.3 Analysis of Multiple Vertices End Conditions .....	60
11.3.1 Double Vertices .....	60
11.3.2 Triple Vertices .....	62
11.4 Analysis of Phantom Vertices End Conditions .....	63
11.4.1 Description .....	63
11.4.2 Position Specification .....	64
11.4.3 End Vertex Interpolation .....	65
11.4.4 Parametric First Derivative Vector Specification .....	66
11.4.5 Parametric Second Derivative Vector Specification .....	67
11.4.6 Zero Parametric Second Derivative Vector .....	67
11.5 Conclusion .....	68
<b>12 Explanation of the Surface Representation</b> .....	69
<b>13 Surface Evaluation and Perturbation with Uniform Shape Parameters</b> .....	71
13.1 Evaluation Method I .....	71
13.2 Evaluation Method II .....	74
13.3 Perturbation Due to the Movement of a Control Vertex .....	76

Table of Contents	IX
<b>14 Generalizing to Continuous Shape Parameters for Surfaces</b>	<b>81</b>
<b>15 Surface Evaluation and Perturbation with Continuous Shape Parameters</b>	<b>85</b>
15.1 Evaluation Method I	85
15.2 Perturbation Due to the Movement of a Control Vertex	87
15.3 Perturbation Due to the Modification of Shape Parameters	88
<b>16 Classification and Analysis of Beta-spline Surface Boundary Conditions</b>	<b>89</b>
16.1 Classification	89
16.2 Analysis of Multiple Vertices Boundary Conditions	89
16.2.1 Double Vertices	89
16.2.2 Triple Vertices	92
16.3 Analysis of Phantom Vertices Boundary Conditions	95
16.4 Conclusion	97
<b>17 Geometrical Interpretation of the Shape Parameters</b>	<b>99</b>
17.1 Introduction	99
17.2 $\beta_1$ : Bias	99
17.3 $\beta_2$ : Tension	101
17.4 $\beta_2$ : Continuous Shape Parameters	107
<b>18 Controlling Surfaces Using the Shape Parameters</b>	<b>109</b>
<b>19 Synthetic Images of Beta-spline Objects</b>	<b>119</b>
<b>20 Conclusion and Future Research Directions</b>	<b>125</b>
<b>Appendix: REDUCE Programs</b>	<b>127</b>
A.1 REDUCE Program to Determine the Coefficient Functions	127
A.2 REDUCE Output of Coefficient Functions	129
A.3 REDUCE Program to Verify the Geometric Continuity Constraints	129
A.4 REDUCE Output Verifying Geometric Continuity Constraints	131
