

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Objective and outline	3
2	Basic Principles	7
2.1	Heat Transfer in granular material	7
2.2	Heat Transfer by convection	12
2.3	Heat transfer between particles	20
2.3.1	Conduction across the contact area	21
2.3.2	Conduction through the interstitial gas	29
2.4	Conduction within the particle	38
3	Simulation techniques	43
3.1	Heat transfer with continuum methods	43
3.1.1	Pseudo-homogeneous continuum models	43
3.1.1.1	The effective thermal conductivity	44
3.1.1.2	Fluid flow through the material	46
3.1.1.3	Moving granular material	47
3.1.2	Heterogeneous continuum models	48
3.2	Heat Transfer within the discrete element method	50
3.2.1	The discrete element method	50
3.2.2	Heat transfer incorporated in the discrete element method	56
4	The Radial Temperature Model	59
4.1	Concept of the model	60
4.2	Solution of the heat conduction equation	63

4.3	Model Adjustments	66
4.3.1	The solid angle	66
4.3.2	The contact temperature	69
4.4	Validations on the particle scale	71
4.5	Coupling of the discrete element method with computational fluid dynamics	77
5	The experimental setup	83
5.1	Design of the experimental rig	83
5.2	Peripheral devices	85
5.3	The thermographic system	88
5.3.1	Basic principles of temperature measurements by infrared thermography	89
5.3.2	Influencing parameters and uncertainties of the thermography in the present setup	92
5.3.3	Determination of the particle temperatures	95
5.3.4	Reproducibility of the experimental results	98
6	Comparison of experiments and simulations	101
6.1	Experimental and Simulation Procedure	102
6.1.1	Measurement and simulation series	102
6.1.2	Parameters for the CFD simulation	104
6.1.3	Parameters for the DEM simulation	106
6.1.4	Choice of the time step for the coupled DEM/CFD simulation	110
6.2	The wavelike movement pattern	111
6.2.1	Visual comparison	112
6.2.2	Comparison of layer temperatures	115
6.2.3	Analysis of the simulations	118
6.2.3.1	The air temperature	118
6.2.3.2	Examination of the decreased heat transfer due to particle motion	119

6.2.3.3 Particle tracking	122
6.3 The reverse stroke movement pattern	125
6.3.1 Visual comparison for the nominal air flow	126
6.3.2 Comparison of layer temperatures for the nominal air flow	128
6.3.3 Visual comparison for the reduced air flow	130
6.3.4 Comparison of layer temperatures for the reduced air flow	132
6.3.5 Comparison to the state-of-the-art model of heat transfer in discrete element methods	135
6.4 Concluding remarks	137
7 Summary and prospect	139
8 Bibliography	143
