

## CONTENTS

### Preface

### **Part A :** *L*-FUNCTIONS FOR THE CLASSICAL GROUPS

Introduction	1
§1. A formal identity	2
§2. Explicit constructions for the symplectic, orthogonal, and unitary groups	7
§3. Explicit constructions for $PGL(n)$ . Connections with the work of Godement and Jacquet	10
§4. Remarks on $GL(n)$ and the other classical groups	14
§5. Special Eisenstein series for $O(2n)$ and $Sp(2n)$	18
§6. Computation of certain local factors for $O(2n)$ and $Sp(2n)$ . Relation to Langlands <i>L</i> -functions	34
References	52

### **PART B :** *L*-FUNCTIONS FOR $G \times GL(n)$

#### **Chapter I : Basic Identities and the Euler Product Expansion**

Introduction	53
§1. Description of Possible Methods	58
§2. Groups of Type $B_n$	67
§3. Groups of Type $D_n$ : Orbits of Maximal Isotropic Subspaces	74
§4. Groups of Type $C_n$ : The Weil Representation	85
§5. Euler Product Expansions	93
§6. Concluding Remarks	97

## Chapter II : The Local Functional Equation

Introduction	99
§7. Groups of Type $B_n$ : Preliminaries	100
§8. Groups of Type $B_n$ : Reduction of the Main Theorem	105
§9. Groups of Type $B_n$ : Proof of the Main Theorem	109
§10. Groups of Type $D_n$	115
§11. Groups of Type $C_n$	120
§12. Rationality of the Zeta functions	125
§13. Normalization of the Eisenstein Series	132
<u>Appendix</u>	137
<u>References for Appendix</u>	142
<u>References for PART B</u>	143
 <u>General Index</u>	 147
 <u>Index of Notation</u>	 150
