

# Contents

<b>1</b>	<b>What Is Software Performance?</b>	<b>1</b>
1.1	Non-functional Validation of Software Systems	2
1.2	Performance as a Non-functional Attribute	4
1.3	System vs. Software Performance Analysis	6
<b>2</b>	<b>Software Modeling Notations</b>	<b>9</b>
2.1	Basic Notations	9
2.1.1	Automata	11
2.1.2	Process Algebras	12
2.1.3	Petri Nets	14
2.1.4	Message Sequence Charts	15
2.2	Unified Modeling Language	17
2.2.1	E-commerce System	18
2.2.2	Use Case Diagram	19
2.2.3	Component Diagram	20
2.2.4	Interaction Diagram	22
2.2.5	Activity Diagram	25
2.2.6	State Machine Diagram	30
2.2.7	Deployment Diagram	32
2.2.8	Profiling UML	33
<b>3</b>	<b>Performance Modeling Notations</b>	<b>35</b>
3.1	Markov Processes	36
3.2	Queueing Networks	39
3.2.1	QN Definition	39
3.2.2	QN Parameterization	40
3.3	Execution Graphs	42
3.4	Layered Queueing Networks	46
3.5	Stochastic Petri Nets	49
3.6	Stochastic Process Algebras	52
3.7	Simulation Models	54

3.8	UML Profile for Schedulability, Performance and Time . . . . .	55
3.8.1	PAprofile: Stereotypes and Tagged Values . . . . .	56
<b>4</b>	<b>Software Lifecycle and Performance Analysis . . . . .</b>	<b>65</b>
4.1	Software Lifecycle . . . . .	65
4.2	Performance Analysis Within the Lifecycle . . . . .	67
4.3	A Simple Application Example . . . . .	74
<b>5</b>	<b>From Software Models to Performance Models . . . . .</b>	<b>79</b>
5.1	A General Framework for Model Transformation . . . . .	79
5.2	Some Transformational Approaches at Work . . . . .	80
5.2.1	UML- $\psi$ : From UML to a Simulation Model . . . . .	81
5.2.2	From UML to a Layered Queueing Network . . . . .	92
5.2.3	SAPone: From UML to a Queueing Network . . . . .	115
5.3	Other Transformational Approaches . . . . .	131
5.3.1	Queueing Network Based Methodologies . . . . .	131
5.3.2	Petri Net-Based Approaches . . . . .	133
5.3.3	Methodologies Based on Simulation Methods . . . . .	134
5.4	Discussion of the Approaches . . . . .	135
5.5	Desirable Attributes of Software Performance Analysis Techniques . . . . .	139
<b>6</b>	<b>Performance Model Solution . . . . .</b>	<b>141</b>
6.1	Model Solution: Foundations and Techniques . . . . .	142
6.1.1	Operational Analysis . . . . .	143
6.1.2	Solution Techniques and Related Notations . . . . .	148
6.1.3	Simulation . . . . .	153
6.2	Model Solution: Tools . . . . .	154
6.2.1	SHARPE—Multiple Performance Model Notations . . . . .	154
6.2.2	SPE-ED—Execution Graphs and Queueing Networks . . . . .	155
6.2.3	GreatSPN—Stochastic Petri Nets . . . . .	156
6.2.4	TimeNET—Stochastic Petri Nets . . . . .	157
6.2.5	TwoTowers—Stochastic Process Algebras . . . . .	158
<b>7</b>	<b>Advanced Issues in Software Performance . . . . .</b>	<b>159</b>
7.1	Software Performance and Model-Driven Architecture . . . . .	159
7.2	Interpretation of Performance Analysis Results . . . . .	164
7.3	Performance-Based Software Reconfiguration . . . . .	165
7.3.1	Allowed Reconfigurations . . . . .	169
7.3.2	Issues to Address . . . . .	169
7.4	A Unifying Ontology for Software Performance . . . . .	171
7.4.1	Three Meta-models for Software Performance . . . . .	172
7.4.2	Building an Ontology from Common Entities: A Bottom-Up Approach . . . . .	177
7.4.3	Expressiveness Issues: A Top-Down Process . . . . .	180
	<b>References . . . . .</b>	<b>183</b>
	<b>Index . . . . .</b>	<b>189</b>
