

Contents

1. Fundamental Relationships	1
1.1 Stress and Strain	1
1.2 One-dimensional Linear Viscoelasticity	4
1.2.1 Linear Hereditary Constitutive Laws	4
1.2.2 The Operator Algebra	6
1.2.3 Alternative Notation	8
1.2.4 Non-aging Materials	9
1.3 Energy Considerations in the One-dimensional Case	12
1.4 Creep and Relaxation	14
1.4.1 The Boltzmann Superposition Principle	17
1.5 The Frequency Representation	18
1.5.1 Dispersion Relations	20
1.5.2 Energy Considerations under Sinusoidal Deformation	22
1.5.3 Creep	23
1.6 Special Forms of the Viscoelastic Functions	25
1.6.1 Standard Linear Solid	25
1.6.2 Maxwell and Voigt Models	26
1.6.3 Spectrum Models	28
1.6.4 Continuous Spectra	31
1.6.5 Power Law Viscoelastic Functions	32
1.7 Temperature Dependence of the Viscoelastic Functions	34
1.7.1 Variable Temperature History	35
1.8 Three-dimensional Constitutive and Dynamical Equations	37
1.8.1 Isothermal Theory	37
1.8.2 The Non-inertial Approximation	39
1.8.3 Frequency Representation	40
1.8.4 Proportionality Assumption	40
1.8.5 Non-isothermal Equations	41
1.8.6 Uniqueness and Other Theorems	42
1.9 Isotropic Media	43
1.9.1 Frequency Representation	45
1.9.2 Proportionality Assumption	45
1.9.3 Non-isothermal Relations	46
1.9.4 Compatibility Equations	47
1.10 Causality	48
1.11 Summary	50

2. General Theorems and Methods of Solution of Boundary Value Problems	54
2.1 The Classical Correspondence Principle	54
2.1.1 Separation of Space and Time Variables	57
2.2 Time-dependent Boundary Regions	57
2.3 Elastic Solutions in Terms of Green's Functions	59
2.4 Decomposition of Hereditary Integrals	63
2.5 The Integral Equation	67
2.6 Expanding and Contracting Boundary Regions	68
2.6.1 The Extended Correspondence Principle	68
2.6.2 The Generalized Partial Correspondence Principle	69
2.6.3 Repetitive Expansion and Contraction	70
2.7 Viscoelastic Papkovitch-Neuber Solution	73
2.8 Plane Strain in Linear Viscoelasticity	74
2.9 Contact between Viscoelastic Media	78
2.9.1 Inclusion of Inertial Affects	81
2.10 Receding Contact in Plane Viscoelasticity	81
2.11 Energy Loss in Moving Contact Problems	84
2.12 Solution of Problems Involving Aging Materials or Non-isothermal Conditions	87
2.12.1 Aging Materials	87
2.12.2 Non-isothermal Problems	88
2.13 Summary	89
3. Plane Non-inertial Contact Problems	91
3.1 Kolosov-Muskhelishvili Equations Adapted to the Half-Plane	92
3.2 The First and Second Boundary Value Problems	95
3.3 The General Mixed Boundary Value Problem	99
3.3.1 Single Contact Interval	102
3.3.2 Frictionless Contact	103
3.4 The General Integral Equation	104
3.5 Moving Load Problems	105
3.5.1 Steady-State Limit	106
3.6 Solution for a Single Load	109
3.6.1 Discrete Spectrum Model	112
3.7 Small Viscoelasticity Approximation	116
3.8 Hysteretic Friction	120
3.8.1 Small Viscoelasticity	122
3.9 Increasing and Decreasing Contact Area	123
3.10 The Plane Normal Contact Problem	126
3.11 The Steady-State Limit of the Normal Problem	130
3.11.1 The Standard Linear Model	131
3.12 Summary	137
4. Plane Non-inertial Crack Problems	140
4.1 Problem Formulation	140
4.2 Fully Open Cracks that are Stationary or Growing	143

4.3	Monotonically Closing Cracks	146
4.4	Stationary Cracks	148
4.4.1	The Standard Linear Model	151
4.4.2	Steady-State Solution	152
4.5	Growing Cracks under a General Loading History	155
4.6	The Griffith Criteria for Crack Extension in Viscoelasticity ...	157
4.7	Barenblatt's Theory of Brittle Cracks	162
4.8	Crack in a Field of Bending	164
4.8.1	A Standard Linear Solid	167
4.9	Summary	170
5.	Three-dimensional Contact Problems	172
5.1	Generalized Boussinesq Formula	173
5.2	The Normal Contact Problem under Varying Load	174
5.2.1	The Steady-State Problem	180
5.3	Impact Problems	183
5.3.1	The First Phase	187
5.3.2	The Second Phase	188
5.3.3	The Short-Time Approximation	191
5.4	Hysteretic Friction	193
5.4.1	Small Viscoelasticity Approximation	193
5.4.2	Small Velocity Approximation	196
5.5	Summary	198
6.	Thermoviscoelastic Boundary Value Problems	199
6.1	A Sphere in a Specified Temperature Field	200
6.2	Summary	205
7.	Plane Inertial Problems	206
7.1	Displacement-Traction Relationships on the Boundary	206
7.1.1	Antiplane Strain	209
7.2	Contact Problems on a Slightly Viscoelastic Medium	210
7.3	Crack Problems	212
7.4	Summary	215
Appendix I	Tables of Relevant Integrals and Other Formulae	217
Table A 1.1	Hilbert Transforms on $[-1, 1]$	217
Table A 1.2	Hilbert Transforms on $[a, b]$	219
Table A 1.3	Miscellaneous Integrals Associated with Hilbert Transforms	220
Table A 1.4	Other Miscellaneous Integrals and Relationships	221
Appendix II	Boundary Value Problems for Analytic Functions	224
A2.1	Some Properties of Analytic Functions	225
A2.1.1	The Principle Value of a Singular Integral .	225
A2.1.2	Analytic Continuation	226

	A2.1.3 Liouville's Theorem	227
	A2.1.4 Singularities	227
	A2.1.5 Branch Points	227
	A2.2 Cauchy Integrals	228
	A2.3 The Hilbert Problem with Constant Coefficient ..	231
	A2.4 The Hilbert Transform	235
Appendix III	Fourier Transforms	241
	A3.1 Definition and Basic Properties	241
	A3.2 Analytic Properties of Fourier Integrals	244
Appendix IV	Non-singular Integral Equations	247
	A4.1 Fredholm Equations	247
	A4.2 Volterra Equations	249
	References	251
	Subject Index	261
