Contents

Preface	9
I. Preliminaries	11
1 Units and Metric	13
1.1 Units	13
1.2 Metric and Notation	14
II Fundamentals of Field Theory	15
2 Classical Fields	17
2.1 Equations of Motion	17
2.1.1 Classical Example: Electrodynamics	19
2.2 Symmetries and Conservation Laws	20
2.2.1 Geometrical Space-Time Symmetries	21
2.2.2 Internal Symmetries	23
3 Free Fields and their Quantization	27
3.1 Classification of Fields	27
3.2 Scalar Fields	29
3.2.1 Quantization of the Hermitian Scalar Field	31
3.2.2 Quantization of the Charged Scalar Field	34
3.3 Vector Fields	35
3.3.1 Massive Fields	35
3.3.2 Massless Fields	37

3.4	Fermion Fields	39
3.4.1	Dirac Equation	39
3.4.2	Lagrangian for Fermion Fields	41
3.4.3	Quantization of the Fermion Field	42
3.4.4	Massless Fermions (Neutrinos)	46
3.5	Transition Rates in Quantum Field Theory	52
III Global Symmetries		61
4	Symmetries of Meson and Baryon Systems	63
4.1	$U(1)$ Symmetry	63
4.1.1	Properties of the Group $U(1)$	64
4.1.2	Structure of the Nucleon Lagrangian	66
4.2	$SU(2)$ Symmetry	67
4.2.1	Properties of the Group $SU(2)$	67
4.2.2	Application to the Pion-Nucleon System	72
4.2.3	$SU(2)$ Multiplets	76
4.3	$SU(3)$ Symmetry	78
4.3.1	Properties of $SU(3)$	79
4.3.2	Structure of $SU(3)$ Multiplets	83
4.3.3	$SU(3)$ Symmetry-Breaking	90
5	Chiral Symmetry	93
5.1	Phenomenology of β -Decay	93
5.2	Current Conservation in Strong Interactions	96
5.2.1	Vector Current Conservation	96
5.2.2	Axial Vector Current Conservation	98
5.3	Chiral Symmetry Group	100
5.3.1	Chiral Symmetry Transformations for the Fermions ..	100
5.3.2	Chiral Symmetry Transformations for the Mesons	103
6	Spontaneous Symmetry Breaking	107
6.1	Goldstone Theorem	107
6.2	Linear σ -Model	111
6.2.1	Lagrangian and Symmetries of the σ -Model	111
6.2.2	Particle Spectrum of the σ -Model	113
6.2.3	Nonlinear σ -Model	118
IV Local Gauge Symmetries		121
7	Gauge Field Theories	123
7.1	Local Phase Transformations in QED	123
7.2	Local Abelian Gauge Invariance	127

7.3	Non-Abelian Gauge Fields	128
7.3.1	Lagrangian for Non-Abelian Gauge Field Theories ...	128
7.3.2	Properties of Non-Abelian Gauge Field Theories	133
V	Quarks and their Interactions	135
8	Quarks	137
8.1	Construction of $SU(3)$ Multiplets from Fundamental Triplets ..	137
8.1.1	Construction of the Representation $3 \otimes \bar{3}$	139
8.1.2	Construction of the Representation $3 \otimes 3 \otimes 3$	140
8.2	State Vectors for the Multiplets	142
8.2.1	Tensor Algebra	143
8.2.2	Hadron Multiplets	145
8.3	Colour Degree of Freedom	150
9	Quantum Chromodynamics	153
9.1	Gauge Group for Strong Interactions	153
9.2	QCD Lagrangian	155
9.3	Properties of QCD	158
9.3.1	Chiral Invariance	158
9.3.2	Antishielding and Confinement	159
9.3.3	Deconfinement Phase Transition	162
VI	Bag Models	165
10	Bag Models of the Hadrons	167
10.1	Potential Well in the Dirac Theory	167
10.2	The MIT Bag	173
10.2.1	Fermions in the MIT Bag	174
10.2.2	Hadron Masses	177
10.2.3	Gluons in the MIT Bag	179
10.2.4	Hyperfine Structure of Bag States	181
10.2.5	Magnetic Moments of the Nucleon	190
10.2.6	Axial Vector Current	193
10.2.7	Chiral Symmetry in the MIT Bag	199
11	Soliton Models of the Hadrons	205
11.1	Skyrmion Model	206
11.2	Hybrid Chiral Bag Model	211
11.3	The σ -Model	217
11.4	The Friedberg-Lee Soliton Bag	220

VII Appendix	223
A: Solutions of the free Dirac Equation and their Properties	225
B: Explicit Quark States for Hadrons	231
Table I	235
Table of Hadronic Particle Properties	235
Topical Bibliography	239
Bibliography	243
Index	247
