Introduction	1
1 Fundamentals	7
1.1 Notation	7
1.2 The basic idea	14
1.2.1 The basic idea from a mathematical point of view	14
1.2.2 The basic idea from an engineering point of view	15
1.3 Influence functions	16
1.3.1 Betti's principle	16
1.3.2 Betti data	20
1.3.3 Fundamental solutions	20
1.4 Coupling on the boundary	25
1.5 Boundary elements	26
1.6 Conforming and non-conforming solutions	29
1.7 The interpretation of the solution	29
1.8 Symmetric formulations	30
1.9 The integral operators and their shifts	33
1.10 Galerkin, collocation and least square	36
1.11 Potentials	39
1.12 The indirect method	48
1.13 Weighted residuals	52
1.14 Influence functions and finite elements	53
1.15 The scale	63
1.16 Trefftz's method	63
1.17 Construction of fundamental solutions	65
1.18 Mixed methods	65
1.19 Shells	67
Exercises	69
2 One-dimensional problems	77
2.1 Rods	77

2.2	Beams	87
2.3	Transfer matrices	94
2.4	Matrix-displacement method	95
2.5	The general principle	96
	Exercises	97
3	Membranes	102
3.1	The influence function for the deflection $u(x)$	108
3.2	Discretization	115
3.3	Element matrices	117
3.4	The master element	119
3.5	Singular integrals	121
3.6	The treatment of the system of equations	123
3.7	The domain integral	125
3.8	Internal actions	126
3.9	Examples	126
3.9.1	Shear and torsion	126
3.9.2	Temperature distribution	130
3.9.3	Brownian motion	131
3.10	The maximum principle	132
3.11	The influence function for the normal derivative	134
3.12	Substructures	135
3.13	Alternatives to substructures	137
3.14	Singularities	142
3.15	Three-dimensional problems	144
	Exercises	147
4	Elastic plates and bodies	154
4.1	Introduction	154
4.2	The influence functions	163
4.3	Discretization	167
4.4	Element matrices for plates	170
4.5	Boundary conditions	174
4.6	Stresses	176
4.7	The domain integrals	178
4.8	Double nodes	181
4.9	Infinite domains	182
4.10	Examples	183
4.10.1	Beam with openings	183
4.10.2	Spring element	183
4.10.3	The search for cavities an inverse problem	187

4.11	Singularities	189
4.12	Concentrated forces	193
4.13	Three-dimensional problems	194
4.14	Axisymmetric problems	202
4.15	Examples	215
	Exercises	218
5	Nonlinear problems	224
5.1	The principle of virtual forces	226
5.2	The calculation of the singular integrals	234
5.3	The system of differential equations	237
5.4	Numerical treatment	239
5.4.1	Initial strain algorithm	240
5.4.2	Initial stress algorithm	241
5.4.3	Examples	242
6	Plates	249
6.1	Introduction	249
6.2	Fundamentals	257
6.3	Influence functions for w and $\partial w / \partial n$	258
6.4	Coupling on the boundary	262
6.5	Discretization	263
6.6	Singular integrals	264
6.7	Element matrices	266
6.8	Degrees-of-freedom	271
6.9	The domain integrals	274
6.10	Actions on the boundary	275
6.11	Internal actions	276
6.12	Internal supports and subdomain loads	279
6.13	Examples	281
6.14	Singularities	290
6.15	Influence surfaces	293
6.16	Special problems	298
6.16.1	Plates on elastic foundations	298
6.16.2	Plate buckling	301
	Exercises	301
7	Boundary elements and finite elements	305
7.1	Theory	305
7.2	Practice	314
7.3	Experience	318

8	Harmonic oscillations	320
8.1	Rods	320
8.2	Beams	321
8.3	Elastic plates and bodies	323
8.4	Kirchhoff plates	325
8.5	Natural frequencies	326
8.6	Helmholtz equation (membrane)	328
8.6.1	The radiation resistance of a rotating engine	329
8.7	Algebraization of the eigenvalue problem	338
9	Transient problems	342
9.1	Finite elements and boundary elements	342
9.1.1	Finite elements	342
9.1.2	Boundary elements	344
9.1.3	Summary	346
9.2	The wave equation	347
9.3	The heat equation	350
9.4	Dynamic displacement fields	351
9.5	Numerical treatment	356
9.6	Fourier- and Laplace transforms	357
9.7	Dynamic stiffness matrices	358
10	Computer programs	364
10.1	BE-LAPLACE	364
10.2	BE-PLATES	368
10.3	BE-PLATE-BENDING	370
10.4	Service	374
	Appendix A	375
	Appendix B	380
	Literature	395
	Bibliography	401
