<b>1</b>	<b>Physical and Geophysical Aspects of Paleomagnetology . . . . .</b>	<b>1</b>
1.1	Magnetic Values and Magnetic Units . . . . .	1
1.2	Principal Properties of the Geomagnetic Field . . .	2
1.2.1	Elements of the Earth's Magnetism . . . . .	2
1.2.2	Origin of the Geomagnetic Field . . . . .	4
1.2.3	Principle of the Central Axial Dipole and the Paleomagnetic Field . . . . .	8
1.2.4	Models of the Geomagnetic Field . . . . .	9
1.3	General Data on Rock Magnetism . . . . .	10
1.3.1	Principal Magnetic Properties of Materials . . . . .	10
1.3.2	Magnetic Properties of Rocks . . . . .	13
1.3.3	Assemblage of Single-Domain, Noninteracting Particles . . . . .	14
1.3.4	Magnetic Viscosity . . . . .	15
1.4	Types of Remanent Magnetization of Rocks . . . .	16
1.4.1	Remanent, Induced and Viscous Magnetizations .	16
1.4.2	Thermoremanent Magnetization . . . . .	17
1.4.3	Detrital Remanent Magnetization . . . . .	20
1.4.4	Chemical Remanent Magnetization . . . . .	24
1.4.5	Pressure Effects Upon Remanent Magnetization .	25
1.4.6	Isothermal and Anhysteretic Remanent Magnetizations . . . . .	26
1.4.7	Stability of Remanent Magnetization . . . . .	29
1.4.8	Spectra of Demagnetization and the Principles of Magnetic Cleaning . . . . .	31
1.5	Ferromagnetic Properties of Rocks . . . . .	32
1.5.1	Mineral-Carriers of the Ferromagnetic Properties of Rocks . . . . .	32
1.5.2	Certain Magnetic Characteristics of Rocks . . . . .	34
1.5.3	Natural Remanent Magnetization $J_n$ of Rocks . . .	40
1.5.4	Physical and Chronologic Components of the NRM; Paleomagnetic Stability of Rocks . . . . .	42
1.5.5	Problem of Acquisition of Reversed Magnetization in a Rock . . . . .	45
1.6	Distribution of Directions of Natural Remanent Magnetization in Rocks . . . . .	47

1.6.1	Initial Paleomagnetic Data and the Drawing of Magnetic Directions . . . . .	47
1.6.2	Fisher's Distribution . . . . .	50
1.6.3	Observed Distributions of Magnetization $J_n$ in Rocks . . . . .	51
<b>2</b>	<b>Methods and Techniques Used in Paleomagnetic Studies . . . . .</b>	<b>53</b>
2.1	Principles of the Investigation of Geologic Bodies; Collection of Oriented Samples . . . . .	53
2.1.1	Objects of Paleomagnetic Studies . . . . .	53
2.1.2	Techniques Used in the Study of Geological Bodies . . . . .	54
2.1.3	Orientation of Samples and Specimen Preparation . . . . .	55
2.2	Magnetic Measurements . . . . .	57
2.2.1	Equipment Used in Magnetic Measurements . . .	57
2.2.2	Astatic Magnetometers . . . . .	58
2.2.3	Spinner Magnetometer . . . . .	59
2.2.4	Fluxgate Magnetometer . . . . .	60
2.3	Field Methods Used in the Determination of Ancient Magnetization . . . . .	60
2.3.1	Evaluation of the Paleomagnetic Stability of Rocks	60
2.3.2	Determination of the Degree of Paleomagnetic Stability . . . . .	62
2.3.3	Determination of the Direction of Ancient Magnetization . . . . .	65
2.3.4	Field Methods Used in the Estimation of the Synchronicity of Ancient Magnetization . . . . .	67
2.4	Magnetic Stability Tests and Magnetic Cleaning . .	69
2.4.1	General . . . . .	69
2.4.2	Temporal Cleaning and the Compensation Method	71
2.4.3	Alternating Magnetic Field Cleaning . . . . .	71
2.4.4	Thermal Cleaning . . . . .	76
2.4.5	Chemical Cleaning . . . . .	77
2.4.6	Low-Temperature Cleaning . . . . .	79
2.4.7	Combined Cleanings . . . . .	79
2.4.8	Methods for the Presentation of Magnetic Cleaning Data and Their Interpretation . . . . .	81
2.5	Analysis of the Origin of Ancient Magnetizations .	82
2.6	Statistical Analysis of the Paleomagnetic Directions and Poles . . . . .	85
2.6.1	The Best Estimates of Mean Direction and Precision Parameters . . . . .	85
2.6.2	Estimates of the Accuracy of the Determination for Unit and Mean Directions of NRM . . . . .	86

Contents	IX
2.6.3	Choice of the Set of the NRM Directions . . . . . 88
2.6.4	Fit of the Observed NRM to Fisher's Distribution . . . . . 89
2.6.5	Two-Tier Statistical Analysis . . . . . 94
2.6.6	Virtual Geomagnetic and Paleomagnetic Pole Distributions and Their Confidence Ovals . . . . . 96
2.7	Methods Used in the Determination of the Geomagnetic Field Intensity in the Geological Past. . . . . 97
2.7.1	The Basic Principles of the Ancient Geomagnetic Field Intensity Determination . . . . . 97
2.7.2	Estimation of the Ancient Field $H_a$ by the Redeposition Method . . . . . 98
2.7.3	Method of Magnetic Anisotropic Parameters . . . . . 99
2.7.4	Thellier's Method . . . . . 99
2.7.5	Method of Anhysteretic Magnetization . . . . . 101
2.7.6	Method of Stepwise Remagnetization . . . . . 102
2.7.7	Estimation of the Ancient Field Intensity $H_a$ by $Q_0$ the Factor . . . . . 103
<b>3</b>	<b>The Geomagnetic Field in the Phanerozoic and the Magnetostratigraphic Scale . . . . . 105</b>
3.1	Geomagnetic Reversals and Geomagnetic Polarity Scales . . . . . 105
3.1.1	Evidence of Geomagnetic Reversals . . . . . 105
3.1.2	Types of Geomagnetic Polarity Scales . . . . . 106
3.1.3	Dating of Polarity Epochs on Lava Flows; the Magnetochronologic Scale . . . . . 107
3.1.4	Zones of Geomagnetic Polarity in Bottom Sediments of the World Ocean . . . . . 108
3.1.5	Scale of Marine Magnetic Anomalies . . . . . 110
3.1.6	Construction of a Magnetostratigraphic Polarity Scale: Principles and Problems . . . . . 110
3.2	The Phanerozoic Magnetostratigraphic Scale . . . . . 113
3.2.1	Structure of the Magnetostratigraphic Scale for the USSR . . . . . 113
3.2.2	Paleozoic . . . . . 115
3.2.3	Mesozoic . . . . . 116
3.2.4	Cenozoic . . . . . 116
3.2.5	Correlation of the Phanerozoic Paleomagnetic Scale for the USSR and the World Paleomagnetic Data . . . . . 118
3.2.6	Comparison of the Mesozoic Paleomagnetic Scale of the USSR and the Scale of Marine Magnetic Anomalies . . . . . 120
3.3	Mechanisms of Geomagnetic Reversals and Their Morphology . . . . . 123
3.3.1	Possible Mechanisms of Geomagnetic Reversals . . . . . 123
3.3.2	Morphology of Geomagnetic Reversals . . . . . 126

X		Contents
3.3.3	Morphology of the Early Paleozoic Reversals . . .	128
3.3.4	Reversals at the Paleozoic-Mesozoic Boundary . .	129
3.3.5	Reversals in the Late Mesozoic-Cenozoic . . . . .	134
3.3.6	Morphology of Geomagnetic Reversals: Conclusions . . . . .	135
3.4	Time Structure of the Geomagnetic Field Between the Reversals . . . . .	137
3.4.1	Events and Excursion of the Geomagnetic Field . .	137
3.4.2	Paleosecular Variations of the Geomagnetic Field .	139
3.5	Regularities in the Spatial Distribution of the Paleomagnetic Field . . . . .	141
3.5.1	Paleomagnetic Field; Procedures of Isolation and Analysis . . . . .	141
3.5.2	Paleomagnetic Field During the Carboniferous and Permian and the Model of the Central Axial Dipole . . . . .	143
3.5.3	Asymmetric (Anomalous) and Axially Symmetric Nondipole Fields . . . . .	146
3.5.4	Model of Noncentral Axial Dipole and Its Testing .	149
3.5.5	Spherical Harmonic Analysis of Paleomagnetic Data . . . . .	151
3.6	The Intensity of the Geomagnetic Field in the Phanerozoic . . . . .	153
<b>4</b>	<b>Paleomagnetism and Plate Tectonics . . . . .</b>	<b>157</b>
4.1	Paleomagnetic Studies of Plate Movements and Fold Belt Tectonics . . . . .	157
4.1.1	Application of Paleomagnetic Methods in Tectonics . . . . .	157
4.1.2	Principles of Paleomagnetic Methods in Solving Tectonic Tasks . . . . .	159
4.1.3	Principles of Analysis and Selection of Paleomagnetic Data . . . . .	160
4.2	Apparent Polar Wander Path for Major Plates; Formation and Break-Up of Supercontinents . . .	162
4.2.1	Paleomagnetic Poles and Their Wandering . . . .	162
4.2.2	Apparent Polar Wander Paths for Major Plates . .	163
4.2.3	Reconstruction of the Relative Positions of Two Continents . . . . .	164
4.2.4	Formation and Break-Up of Supercontinents . . .	166
4.3	Paleomagnetic Poles and Movements of the Russian and Siberian Platforms in the Paleozoic . .	167
4.3.1	Apparent Polar Wander Paths of the Russian and Siberian Platforms . . . . .	167
4.3.2	Paleozoic Drift of the Siberian and Russian Platforms . . . . .	170

4.4	Paleomagnetic Poles and Plate Kinematics . . . . .	172
4.4.1	Reconstruction of Plate Positions . . . . .	172
4.4.2	Determination of Kinematic Parameters of Plate Movement . . . . .	174
4.4.3	Paleomagnetism of Seamounts and Movement of Oceanic Plates . . . . .	176
4.5	Global Reconstructions for the Paleozoic and Mesozoic Epochs . . . . .	178
4.5.1	Global Reconstructions for the Mesozoic and Paleogene . . . . .	178
4.5.2	Global Reconstructions for the Middle and Late Paleozoic . . . . .	181
4.5.3	Examples of Global Reconstructions for the Late Proterozoic and Early Paleozoic . . . . .	184
4.5.4	History of Horizontal Motions of the Major Lithospheric Plates in the Proterozoic and Phanerozoic: Conclusions . . . . .	187
<b>5</b>	<b>Paleomagnetism and Tectogenetic Problems . . . . .</b>	<b>189</b>
5.1	Paleomagnetism in Fold Belts . . . . .	189
5.1.1	Components of Tectonic Movements and Their Paleomagnetic Studies . . . . .	189
5.1.2	The Determination of Local Movements and Correction for Their Effects; General Solution . . .	190
5.1.3	The Determination of Local Movements and Correction for Their Effects; A Special Case . . .	191
5.1.4	Regional and Local Components of Tectonic Movements . . . . .	193
5.2	Palinspastic Reconstructions According to Paleomagnetic Data . . . . .	194
5.2.1	Local Tectonic Movements in the Tajik Depression and in Southern Tien Shan . . . . .	194
5.2.2	Construction of the Palinspastic Scheme of the Tajik Depression in the Early Cretaceous . . . . .	196
5.2.3	Reconstruction of the Paleogene Sedimentary Basin of the Tajik Depression . . . . .	198
5.2.4	Palinspastic Scheme for Central Asia During the Early Permian Epoch . . . . .	200
5.3	Deformations in Certain Fold Belts of Eurasia According to Paleomagnetic Data . . . . .	202
5.3.1	On the Nature of Tectonic Deformations in the Alpine-Himalayan Fold Belt . . . . .	202
5.3.2	Deformations in the Urals Belt . . . . .	206
5.3.3	Deformations in the Areas Surrounding the Siberian Platform . . . . .	209

5.4	Tectogenesis and Rhythmicity of Geomagnetic Reversals . . . . .	213
5.5	A General Hypothesis of Tectogenesis . . . . .	218
5.5.1	Hypothesis of Planetary Equilibrium . . . . .	218
5.5.2	Drift of the Lithospheric Plates and the Coriolis Force . . . . .	218
<b>6</b>	<b>Paleomagnetology and Mineral Deposits . . . . .</b>	<b>226</b>
6.1	Introductory Remarks . . . . .	226
6.2	Paleolatitudinal Constraint on Crustal Deformation . . . . .	226
6.3	Types of Oil and Gas Basins, Their Genesis and Distribution . . . . .	230
6.4	Paleolatitudinal Distribution of Mineral Deposits . . . . .	232
6.4.1	Coal . . . . .	232
6.4.2	Salt . . . . .	234
6.4.3	Oil and Gas . . . . .	236
6.4.4	Ore Deposits . . . . .	238
6.5	Association of Transgressions with Certain Paleolatitudes . . . . .	239
6.6	Paleomagnetic-Tectonic Criteria in Outlining Oil and Gas Fields . . . . .	243
<b>7</b>	<b>Certain Problems of Paleomagnetism . . . . .</b>	<b>245</b>
7.1	Synchronous and Metachronous Components of the Ancient Magnetization: The Problem of Late Paleozoic Remagnetization . . . . .	245
7.2	Hypothesis of the Earth's Expansion . . . . .	251
7.3	Paleomagnetism of the Precambrian . . . . .	253
