

Contents

1	Introduction to Neural Networks	1
1.1	Properties of Neural Networks	3
1.2	Neural Network Learning	5
1.2.1	Supervised Learning	5
1.2.2	Unsupervised Learning	5
1.3	Perceptron	6
1.4	Adaline and Least Mean Square Algorithm	8
1.5	Multilayer Perceptron and Backpropagation Algorithm	9
1.5.1	Output Layer Learning	11
1.5.2	Hidden Layer Learning	11
1.6	Radial Basis Function Networks	12
1.7	Support Vector Machines	13
2	Principles of Sensitivity Analysis	17
2.1	Perturbations in Neural Networks	17
2.2	Neural Network Sensitivity Analysis	18
2.3	Fundamental Methods of Sensitivity Analysis	21
2.3.1	Geometrical Approach	21
2.3.2	Statistical Approach	23
2.4	Summary	24
3	Hyper-Rectangle Model	25
3.1	Hyper-Rectangle Model for Input Space of MLP	25
3.2	Sensitivity Measure of MLP	26
3.3	Discussion	27
4	Sensitivity Analysis with Parameterized Activation Function	29
4.1	Parameterized Antisymmetric Squashing Function	29
4.2	Sensitivity Measure	30
4.3	Summary	31
5	Localized Generalization Error Model	33
5.1	Introduction	33
5.2	The Localized Generalization Error Model	35
5.2.1	The Q-Neighborhood and Q-Union	36

5.2.2	The Localized Generalization Error Bound	36
5.2.3	Stochastic Sensitivity Measure for RBFNN	38
5.2.4	Characteristics of the Error Bound	40
5.2.5	Comparing Two Classifiers Using the Error Bound	42
5.3	Architecture Selection Using the Error Bound	42
5.3.1	Parameters for MC ² SG	44
5.3.2	RBFNN Architecture Selection Algorithm for MC ² SG	44
5.3.3	A Heuristic Method to Reduce the Computational Time for MC ² SG	45
5.4	Summary	45
6	Critical Vector Learning for RBF Networks	47
6.1	Related Work	47
6.2	Construction of RBF Networks with Sensitivity Analysis	48
6.2.1	RBF Classifiers' Sensitivity to the Kernel Function Centers	49
6.2.2	Orthogonal Least Square Transform	51
6.2.3	Critical Vector Selection	52
6.3	Summary	52
7	Sensitivity Analysis of Prior Knowledge	55
7.1	KBANNs	56
7.2	Inductive Bias	58
7.3	Sensitivity Analysis and Measures	59
7.3.1	Output-Pattern Sensitivity	59
7.3.2	Output-Weight Sensitivity	60
7.3.3	Output-H Sensitivity	61
7.3.4	Euclidean Distance	61
7.4	Promoter Recognition	61
7.4.1	Data and Initial Domain Theory	62
7.4.2	Experimental Methodology	63
7.5	Discussion and Conclusion	64
8	Applications	69
8.1	Input Dimension Reduction	69
8.1.1	Sensitivity Matrix	70
8.1.2	Criteria for Pruning Inputs	70
8.2	Network Optimization	71
8.3	Selective Learning	74
8.4	Hardware Robustness	76
8.5	Measure of Nonlinearity	77
8.6	Parameter Tuning for Neocognitron	78
8.6.1	Receptive Field	79
8.6.2	Selectivity	80
8.6.3	Sensitivity Analysis of the Neocognitron	80
	Bibliography	83
