## Part I. CALORIMETRY 1

### CHAPTER

1	Notations. Constitutive Domain. Heat and Work. Processes. Paths. Cycles. (Definitions 1–8)	3
2	Thermal Equation of State. Examples. First Reversal Theorem. (Axiom I, Definitions 9 and 10, Theorem 1)	8
3	The Doctrine of Latent and Specific Heats. Second Reversal Theorem. Fundamental Theorem of Calorimetry. (Axiom II, Theorems 2 and 3)	20
4	Adiabatic Processes. Laplace's Theorem. (Definitions 11 and 12 ( <i>Ordinary and Neutral Points</i> ), Theorem 4)	26
5	Examples.	32
6	Emission–Absorption Estimates. (Definition 13 ( <i>Pro-Entropy</i> ), Theorem 5)	38

## Part II. CARNOT'S GENERAL AXIOM 45

7	Carnot Processes. Carnot Cycles and Webs. Lemmas regarding Heat and Work for Cycles in a Carnot Web. (Definitions 14 ( <i>Carnot Cycle</i> ), 15 ( <i>Ordinary Carnot Cycle</i> ), and 16 ( <i>Carnot Web</i> ))	47
---	---	----

8	Carnot's General Axiom. Local Theory: Reech's First Theorem, First Principal Lemma. (Axiom III, Theorem 6, First Principal Lemma ( <i>Efficiency Theorem for Carnot Cycles in a Web</i> ))	57
9	Basic Constitutive Restrictions in a Thermodynamic Part and in the Normal Set. Pro-Entropy and Internal Pro-Energy. (Second Principal Lemma ( <i>Local Basic Constitutive Restrictions</i> ), Third Principal Lemma ( <i>Escape from the Web</i> ), Definition 17 ( <i>Thermodynamic Part</i> ), Theorem 7 ( <i>Basic Constitutive Restrictions in <math>\mathcal{D}_{th}</math></i> ), Theorem 8 ( <i>Pro-Entropy and Internal Pro-Energy</i> ), Definition 17 <sub>bla</sub> ( <i>Normal Set</i> ), Theorem 7 <sub>ext</sub> ( <i>Basic Constitutive Restrictions in <math>\mathcal{D}_n</math></i> ))	66
10	Cyclic Processes in $\mathcal{D}_{th}$ and $\mathcal{D}_n$ . C-Processes. Efficiency Theorem and Emission-Absorption Theorem for C-Processes. Completeness Theorems. (Definition 18 ( <i>C-Process</i> ), Theorem 9 ( <i>Emission-Absorption Theorem for C-Processes</i> ), Theorem 10 ( <i>Efficiency Theorem for C-Processes in <math>\mathcal{D}_{th}</math></i> ), Theorem 11 ( <i>Completeness of Constitutive Restrictions and Energy-Entropy Relations in <math>\mathcal{D}_{th}</math></i> ), Theorems 9 <sub>bla</sub> and 10 <sub>bla</sub> ( <i>Emission-Absorption and Efficiency Theorems in <math>\mathcal{D}_n</math></i> ), Corollary 11.2 <sub>ext</sub> ( <i>Equivalence of Constitutive Restrictions and CARNOT's General Axiom</i> ))	81
11	Properties of Ideal Gases and Van der Waals Fluids.	100
12	Relation of Motors to Refrigerators. (Theorem 12)	109
13	Estimates of the Efficiency of a Body undergoing a Cyclic Process. (Theorem 13)	112
14	The Fourth Theorem of Reech: Existence of Four Thermodynamic Potentials. (Definitions 19 and 20, Theorem 14)	119
	<b>Part III. UNIVERSAL EFFICIENCY OF ORDINARY CARNOT CYCLES</b>	<b>127</b>
15	Universal Efficiency of Ordinary Carnot Cycles Compatible with the Existence of an Ideal Gas with Constant Specific Heats. Proof of the "First Law" and "Second Law" of Thermodynamics. (Axioms IV ( <i>Universal Efficiency</i> ) and V ( <i>Ideal Gas Thermometer</i> ), Theorem 15) Appendix: A System of Axioms for the Thermodynamics of Clausius.	129 137
16	Invariance of the Carnot Function under Change of the Unit of Temperature. Alternative to Axiom V. (Axiom V $\alpha$ , Theorem 16, Axiom V $\beta$ , Theorem 17)	140
	<b>EPILOGUE</b>	<b>145</b>
17	Axioms for Energy and Entropy.	147
	Index of frequently used symbols	152
	Index of frequently used terms	153
	Index of references to historical origins of thermodynamics	154
	Index of references to standard presentations of thermodynamics	154
