|                                                                   |    |
|-------------------------------------------------------------------|----|
| <b>1. Introduction</b>                                            | 3  |
| 1.1 What is Image Understanding?                                  | 3  |
| 1.2 Imaging Geometry of Perspective Projection                    | 5  |
| 1.3 Geometry of Camera Rotation                                   | 9  |
| 1.3.1 Projective Transformation                                   | 12 |
| 1.4 The 3D Euclidean Approach                                     | 13 |
| 1.5 The 2D Non-Euclidean Approach                                 | 16 |
| 1.5.1 Relative Geometry and Absolute Geometry                     | 18 |
| 1.6 Organization of This Book                                     | 19 |
| <b>2. Coordinate Rotation Invariance of Image Characteristics</b> | 21 |
| 2.1 Image Characteristics and 3D Recovery Equations               | 21 |
| 2.2 Parameter Changes and Representations                         | 22 |
| 2.2.1 Rotation of the Coordinate System                           | 25 |
| 2.3 Invariants and Weights                                        | 25 |
| 2.3.1 Signs of the Weights and Degeneracy                         | 27 |
| 2.4 Representation of a Scalar and a Vector                       | 28 |
| 2.4.1 Invariant Meaning of a Position                             | 29 |
| 2.5 Representation of a Tensor                                    | 29 |
| 2.5.1 Parity                                                      | 34 |
| 2.5.2 Weyl's Theorem                                              | 35 |
| 2.6 Analysis of Optical Flow for a Planar Surface                 | 35 |
| 2.6.1 Optical Flow                                                | 45 |
| 2.6.2 Translation Velocity, Rotation Velocity, and Egomotion      | 46 |
| 2.6.3 Equations in Terms of Invariants                            | 48 |
| 2.7 Shape from Texture for Curved Surfaces                        | 48 |
| 2.7.1 Curvatures of a Surface                                     | 56 |
| Exercises                                                         | 58 |
| <b>3. 3D Rotation and Its Irreducible Representations</b>         | 61 |
| 3.1 Invariance for the Camera Rotation Transformation             | 61 |
| 3.1.1 $SO(3)$ Is Three Dimensional and Not Abelian                | 62 |
| 3.2 Infinitesimal Generators and Lie Algebra                      | 63 |
| 3.3 Lie Algebra and Casimir Operator of the 3D Rotation Group     | 69 |
| 3.3.1 Infinitesimal Rotations Commute                             | 71 |
| 3.3.2 Reciprocal Representations                                  | 73 |
| 3.3.3 Spinors                                                     | 74 |

|                                                                   |            |
|-------------------------------------------------------------------|------------|
| 3.4 Representation of a Scalar and a Vector . . . . .             | 74         |
| 3.5 Irreducible Reduction of a Tensor . . . . .                   | 76         |
| 3.5.1 Canonical Form of Infinitesimal Generators . . . . .        | 80         |
| 3.5.2 Alibi vs Alias . . . . .                                    | 82         |
| 3.6 Restriction of $SO(3)$ to $SO(2)$ . . . . .                   | 83         |
| 3.6.1 Broken Symmetry . . . . .                                   | 85         |
| 3.7 Transformation of Optical Flow . . . . .                      | 85         |
| 3.7.1 Invariant Decomposition of Optical Flow . . . . .           | 98         |
| Exercises . . . . .                                               | 99         |
| <b>4. Algebraic Invariance of Image Characteristics . . . . .</b> | <b>103</b> |
| 4.1 Algebraic Invariants and Irreducibility . . . . .             | 103        |
| 4.2 Scalars, Points, and Lines . . . . .                          | 105        |
| 4.3 Irreducible Decomposition of a Vector . . . . .               | 109        |
| 4.4 Irreducible Decomposition of a Tensor . . . . .               | 112        |
| 4.5 Invariants of Vectors . . . . .                               | 115        |
| 4.5.1 Interpretation of Invariants . . . . .                      | 119        |
| 4.6 Invariants of Points and Lines . . . . .                      | 121        |
| 4.6.1 Spherical Geometry . . . . .                                | 126        |
| 4.7 Invariants of Tensors . . . . .                               | 129        |
| 4.7.1 Symmetric Polynomials . . . . .                             | 134        |
| 4.7.2 Classical Theory of Invariants . . . . .                    | 136        |
| 4.8 Reconstruction of Camera Rotation . . . . .                   | 137        |
| Exercises . . . . .                                               | 142        |
| <b>5. Characterization of Scenes and Images . . . . .</b>         | <b>147</b> |
| 5.1 Parametrization of Scenes and Images . . . . .                | 147        |
| 5.2 Scenes, Images, and the Projection Operator . . . . .         | 148        |
| 5.3 Invariant Subspaces of the Scene Space . . . . .              | 152        |
| 5.3.1 Tensor Calculus . . . . .                                   | 154        |
| 5.4 Spherical Harmonics . . . . .                                 | 157        |
| 5.5 Tensor Expressions of Spherical Harmonics . . . . .           | 161        |
| 5.6 Irreducibility of Spherical Harmonics . . . . .               | 165        |
| 5.6.1 Laplace Spherical Harmonics . . . . .                       | 170        |
| 5.7 Camera Rotation Transformation of the Image Space . . . . .   | 172        |
| 5.7.1 Parity of Scenes . . . . .                                  | 176        |
| 5.8 Invariant Measure . . . . .                                   | 176        |
| 5.8.1 First Fundamental Form . . . . .                            | 178        |
| 5.8.2 Fluid Dynamics Analogy . . . . .                            | 179        |
| 5.9 Transformation of Features . . . . .                          | 181        |
| 5.10 Invariant Characterization of a Shape . . . . .              | 186        |
| 5.10.1 Invariance on the Image Sphere . . . . .                   | 191        |
| 5.10.2 Further Applications . . . . .                             | 192        |
| Exercises . . . . .                                               | 194        |

|                                                                  |         |
|------------------------------------------------------------------|---------|
| <b>6. Representation of 3D Rotations</b> . . . . .               | 197     |
| 6.1 Representation of Object Orientations . . . . .              | 197     |
| 6.2 Rotation Matrix . . . . .                                    | 197     |
| 6.2.1 The $nD$ Rotation Group $SO(n)$ . . . . .                  | 201     |
| 6.3 Rotation Axis and Rotation Angle . . . . .                   | 202     |
| 6.4 Euler Angles . . . . .                                       | 205     |
| 6.5 Cayley–Klein Parameters . . . . .                            | 207     |
| 6.6 Representation of $SO(3)$ by $SU(2)$ . . . . .               | 210     |
| 6.6.1 Spinors . . . . .                                          | 215     |
| 6.7 Adjoint Representation of $SU(2)$ . . . . .                  | 215     |
| 6.7.1 Differential Representation . . . . .                      | 218     |
| 6.8 Quaternions . . . . .                                        | 220     |
| 6.8.1 Quaternion Field . . . . .                                 | 224     |
| 6.9 Topology of $SO(3)$ . . . . .                                | 225     |
| 6.9.1 Universal Covering Group . . . . .                         | 229     |
| 6.10 Invariant Measure of 3D Rotations . . . . .                 | 230     |
| Exercises . . . . .                                              | 233     |
| <br><b>7. Shape from Motion</b> . . . . .                        | <br>239 |
| 7.1 3D Recovery from Optical Flow for a Planar Surface . . . . . | 239     |
| 7.2 Flow Parameters and 3D Recovery Equations . . . . .          | 240     |
| 7.2.1 Least Squares Method . . . . .                             | 243     |
| 7.3 Invariants of Optical Flow . . . . .                         | 245     |
| 7.4 Analytical Solution of the 3D Recovery Equations . . . . .   | 249     |
| 7.5 Pseudo-orthographic Approximation . . . . .                  | 253     |
| 7.5.1 Robustness of Computation . . . . .                        | 256     |
| 7.6 Adjacency Condition of Optical Flow . . . . .                | 256     |
| 7.7 3D Recovery of a Polyhedron . . . . .                        | 260     |
| 7.7.1 Noise Sensitivity of Computation . . . . .                 | 262     |
| 7.8 Motion Detection Without Correspondence . . . . .            | 263     |
| 7.8.1 Stereo Without Correspondence . . . . .                    | 271     |
| Exercises . . . . .                                              | 274     |
