

TABLE OF CONTENTS

A smoothing technique for nondifferentiable optimization problems.....	1
A. Ben-Tal and M. Teboulle	
Local study of newton type algorithms for constrained problems.....	13
J. F. Bonnans	
Numerical study of projective methods for linear programming.....	25
C. Fraley and J.-Ph. Vial	
Applications and numerical convergence of the partial inverse method.....	39
H. Idrissi, O. Lefebvre and C. Michelot	
On some recent developments in the theory of second order optimality conditions	55
A. Ioffe	
On the method of analytic centers for solving smooth convex programs.....	69
F. Jarre	
An optimization problem with a piecewise linear objective and conditional threshold constraints. Solution by partitioning.....	87
B. Lemaire and C. Lemaire-Misonne	
ϵ -Regularized two-level optimization problems : Approximation and existence results.....	99
P. Loridan and J. Morgan	
Variational convergence and perturbed proximal method for saddle point problems.....	115
K. Mouallif	
Note on Pareto optimality and duality for certain nonlinear systems.....	141
Werner Oettli	
An $O(n^3L)$ approximate center method for linear programming	147
C. Roos	
Improvement and implementation of some algorithms for nonconvex optimization problems....	159
Tran Vu Thieu	
On a search problem in graph theory.....	171
Eberhard Triesch	
Gradient Newton flows for complex polynomials	177
F. Twilt, P. Jonker and M. Streng	
A unified approach to projective algorithms for linear programming	191
Jean-Philippe Vial
