Abstract	ix
1 Introduction	1
1.1 Capacitive rf discharges	4
1.2 Plasma boundary sheath	9
1.3 Sheath ion transport	17
1.4 Silicon etching with halogen chemistry	22
1.5 In situ plasma diagnostics	29
1.5.1 Mass resolved ion energy analysis	29
1.5.2 Infrared absorption spectroscopy	35
1.6 HPSM simulations	36
2 Mass resolved ion energy analysis	40
2.1 Analyzer ion optics	41
2.2 Electrode voltage settings	42
2.3 Determination of floating potential	45
2.4 Comparison to HPSM simulations	48
2.4.1 Extraction effects	49
2.4.2 Orifice transmission function	51
2.4.3 Energy transmission function	52
2.4.4 Mass transmission function	54
2.4.5 Sheath behaviour in front of different dielectric surfaces	54
2.4.6 HPSM extensions and modifications	58
2.5 HPSM simulation studies	63
2.5.1 Argon discharges	63
2.5.2 Hydrogen bromide discharges	72
2.5.3 Summary and discussion	79
3 Complementary diagnostic techniques	81
3.1 In situ plasma diagnostic techniques	81
3.1.1 Mass spectrometry for plasma flux analysis	81
3.1.2 Appearance potential mass spectrometry	83
3.1.3 Quantum cascade infrared laser absorption spectroscopy	85
3.1.4 RF probe measurements	90
3.2 Evaluation of etch results	91
3.2.1 Gravimetry (weight loss measurements)	91
3.2.2 Ellipsometry	93
4 Experimental investigations and results	95
4.1 Plasma reactor design and experimental setup	95
4.2 Argon discharges	104
4.2.1 Neutral mass spectra	104
4.2.2 Variation of power	105
4.2.3 Variation of pressure	111
4.2.4 Variation of gas flow rate	115
4.2.5 Variation of magnetic field	117
4.2.6 Summary	121
4.3 Hydrogenbromide discharges	124
4.3.1 Neutral mass spectra and degree of dissociation	124
4.3.2 Variation of power	126
4.3.3 Variation of pressure	133
4.3.4 Variation of gas flow rate	137
4.3.5 Variation of magnetic field	140
4.3.6 Summary	142

4.4 Nitrotrifluoride discharges	144
4.4.1 Neutral mass spectra and degree of dissociation	145
4.4.2 Variation of power	147
4.4.3 Variation of pressure	154
4.4.4 Variation of gas flow rate	157
4.4.5 Variation of magnetic field	160
4.4.6 Summary	162
4.5 HBr/NF ₃ mixtures	164
4.5.1 Neutral mass spectra	164
4.5.2 Variation of power	166
4.5.3 Variation of pressure	173
4.5.4 Variation of gas flow rate	177
4.5.5 Variation of magnetic field	178
4.5.6 Etch mechanisms in HBr/NF ₃ discharges	179
4.5.7 Summary	185
4.6 Complex halogen mixtures	188
4.6.1 Neutral mass spectra	189
4.6.2 Further discharge analysis	194
4.6.3 Summary and discussion	196
5 Summary and conclusions	200
Appendix A: Heavy particle collision parameters for Ar	206
Appendix B: Heavy particle collision parameters for HBr	207
Appendix C: HPSM simulation results for Ar	208
Appendix D: HPSM simulation results for HBr	216
Appendix E: Experimental results for Ar	231
Appendix F: Experimental results for HBr	234
Appendix G: Experimental results for NF ₃	237
Appendix H: Experimental results for HBr/NF ₃	240
Appendix I: Experimental results for SiF ₄	242
Appendix J: Experimental results for SiCl ₄	245
