1 Selection and Preparation of Patients for In Vitro Fertilization

<i>G. T. Kovacs</i>	1
1.1 Introduction	1
1.2 The Waiting List	1
1.2.1 Patient Activation	2
1.3 Length of Menstrual Cycles – Confidence Limits	3
1.4 Hormonal Assessment	3
1.5 Assessment of Semen	3
1.5.1 Provision of Semen	3
1.5.2 Preliminary Sperm-wash Preparation	4
1.5.3 Immunological Studies	4
1.5.4 Microbiological Assessment of Semen	4
1.6 Serological Assessment	4
1.6.1 Female Partner	4
1.6.2 Male Partner	5
1.7 Bacteriological Assessment of the Cervix	5
1.8 Assessment of the Pelvis Prior to Treatment	6
1.9 Consent Forms	6
1.10 Psychological Preparation	7
1.11 Patient Support Group	8

2 Patient Management

<i>I. T. Cameron and D. L. Healy</i>	11
2.1 Introduction	11
2.2 Natural Folliculogenesis	11
2.2.1 Luteinization and Ovulation	12
2.3 Stimulated Follicular Development	14
2.3.1 Hyperstimulation	15
2.3.2 Inadequate Stimulation	15
2.3.3 GnRH Agonists	19
2.4 Conclusion	19

3 Oocyte Pick-up

<i>J. Leeton</i>	23
3.1 Introduction	23
3.2 Laparoscopic Method	23
3.3 Ultrasound-Guided Techniques	24
3.3.1 Transvesical Approach	24
3.3.2 Perurethral Approach	24
3.3.3 Transvaginal Approach	24
3.4 Ultrasound-Guided Technique Using a Combined Vaginal Needle and Transducer	25
3.4.1 Machines	25
3.4.2 Aspiration Needles	25
3.4.3 Sterilization of Transducers	26
3.4.4 Vaginal Preparation	26
3.4.5 Anaesthesia	26
3.4.6 Technique	27
3.4.7 Difficulties with Technique	29
3.5 Results	29
3.6 Conclusions	30

4 Fertilization and Embryo Culture

<i>A. Trounson</i>	33
4.1 Introduction	33
4.2 Quality Control of Laboratory Procedures	33
4.2.1 Incubators	34
4.2.2 Glassware and Other Equipment	34
4.2.3 Water	34
4.2.4 Other Factors	35
4.2.5 Toxicity	35
4.3 Media for Insemination of Eggs and Culture of Embryos	36
4.3.1 Complex Media	36
4.3.2 Simple Balanced Salt Solutions	37
4.3.3 Serum Supplementation	38
4.3.4 Physiological Fluids	39
4.3.5 Choice of Culture Medium	39
4.4 Culture Conditions and Methods	40
4.5 Evaluation of Eggs	41
4.6 Insemination of Eggs	42
4.7 Microfertilization Techniques	42
4.8 Evaluation of the Fertilization Process	44
4.9 Evaluation of Embryos	46
4.10 Conclusions	47

5 Results from In Vitro Fertilization

<i>H. W. Jones Jr and P. A. W. Rogers</i>	51
5.1 The Evaluation of Results	
<i>H. W. Jones Jr</i>	51

5.1.1 Numerator Problems	51
5.1.2 Denominator Problems	53
5.2 Results	
<i>P. A. W. Rogers</i>	53
5.2.1 Ovulation Induction and Oocyte Retrieval	54
5.2.2 Fertilization and Embryo Transfer	56
5.2.3 Pregnancy	57
5.2.4 Gamete Intra-fallopian Transfer	60
5.2.5 Embryo Cryopreservation	61
 6 Gamete Intra-fallopian Transfer	
<i>R. P. S. Jansen</i>	63
6.1 History	63
6.2 Gamete Preparation	63
6.2.1 Ovarian Stimulation and Laparoscopic Follicle Aspiration	63
6.2.2 Preparation of Spermatozoa	70
6.3 Gamete Transfer	70
6.3.1 Laparoscopy	70
6.3.2 Minilaparotomy	71
6.3.3 Transvaginal GIFT	71
6.4 Results	73
6.4.1 Pregnancies and Pregnancy Outcomes	73
6.4.2 Effect of Technical Factors	74
6.4.3 Effect of Oocyte Number	74
6.4.4 Effect of Clinical Variables	75
6.5 Complications	76
 7 Outcome of Pregnancy	
<i>P. A. L. Lancaster</i>	81
7.1 Introduction	81
7.2 Characteristics of Infertile Couples	82
7.3 Overall Results of IVF Pregnancies	82
7.4 Early Pregnancy Losses	85
7.4.1 Preclinical Abortion	85
7.4.2 Spontaneous Abortion	85
7.4.3 Ectopic Pregnancy	86
7.5 Viable Pregnancies	86
7.5.1 Duration of Pregnancy	86
7.5.2 Multiple Pregnancy	87
7.5.3 Obstetric Complications	88
7.5.4 Mode of Delivery	88
7.6 Infants Born after In Vitro Fertilization	89
7.6.1 Sex Ratio	89
7.6.2 Birthweight	89
7.6.3 Fetal Growth	90
7.6.4 Perinatal Mortality	91
7.6.5 Congenital Malformations	91

7.6.6 Follow-up Studies	92
7.7 Conclusions	93

8 Andrology, Male Factor Infertility and IVF

<i>Caroline Yates, A. Thomas, G. T. Kovacs and D. M. de Kretser</i>	95
---	----

8.1 Introduction	95
8.2 Assessment of the Male	95
8.2.1 Semen Analysis	96
8.2.2 Advanced Semen Analysis	97
8.3 Separation of Motile Sperm	100
8.3.1 "Swim-up" Procedure	100
8.3.2 Albumin Columns	101
8.3.3 Glass Wool Columns	101
8.3.4 Sedimentation	102
8.3.5 Percoll Gradients	102
8.4 Male Factor Infertility	103
8.4.1 IVF and Male Factor Infertility	104

9 Oocyte Freezing

<i>C. Chen</i>	113
9.1 Introduction	113
9.2 The Human Oocyte	114
9.2.1 Oocyte Meiosis and Maturation	115
9.3 Feasibility of Oocyte Cryopreservation	115
9.3.1 Animal Evidence	115
9.3.2 Human Studies	116
9.4 Cryobiological Concepts in Oocyte Cryopreservation	116
9.4.1 Cryobiological Concepts	116
9.4.2 Cellular Events During Freezing and Thawing	117
9.5 Developing Oocyte Freezing Using an Animal Model	118
9.6 Establishing Human Oocyte Freezing	119
9.7 Factors Influencing Successful Freezing	120
9.7.1 Criteria for Oocyte Selection	120
9.7.2 Stage of Oocyte Maturation	120
9.7.3 Size of Oocyte-Cumulus Oophorus Complex	120
9.7.4 Volume of Medium for Freezing	121
9.7.5 Exposure to DMSO	121
9.7.6 Seeding	121
9.7.7 Rate of Freezing	121
9.7.8 Rate of Thawing	121
9.7.9 Assessment of the Oocyte	122
9.8 Results of Human Oocyte Cryopreservation	122
9.8.1 Clinical Studies	123
9.9 Discussion	124
9.9.1 Practical Applications of Human Oocyte Cryopreser- vation	124
9.9.2 Advantages of Human Oocyte Cryopreservation ..	125
9.9.3 Frozen Human Oocyte Pregnancies World-wide	125

10 Embryo Cryopreservation

<i>A. Trounson</i>	127
10.1 Introduction	127
10.2 Requirements for Embryo Freezing	128
10.3 Development of Slow Cooling Methods for Cryopreserving Human Embryos	129
10.4 Methods of Cryopreservation by Slow Cooling	130
10.4.1 Slow Cooling in DMSO	130
10.4.2 Slow Cooling in 1,2-Propanediol	132
10.4.3 Slow Cooling in Glycerol	132
10.5 Success of Cryopreservation by Slow Cooling	133
10.6 The Development of Rapid Cooling Methods for Cryopreservation	135
10.6.1 Vitrification	135
10.6.2 Vapour Freezing	136
10.6.3 Ultrarapid Freezing	137
10.7 Use of Rapid Freezing Methods for Cryopreservation of Human Embryos	138
10.8 Cryopreservation of Embryos and Unfertilized Oocytes	138
10.9 Conclusion	140

11 Oocyte Donation

<i>P. Rogers, J. Leeton, I. T. Cameron, C. Murphy, D. L. Healy and P. Lutjen</i>	143
11.1 Introduction	143
11.2 Indications for Donor Oocytes	143
11.3 Clinical Management	144
11.3.1 Counselling	144
11.3.2 Synchronization	144
11.3.3 Embryo Transfer	145
11.4 Source of Donor Oocytes	145
11.4.1 IVF Patients	145
11.4.2 Known Donors	145
11.4.3 Volunteer Donors	145
11.4.4 Women Undergoing Sterilization	146
11.4.5 Donation of Oocytes Fertilized In Vivo	146
11.5 Steroid Replacement Therapy	146
11.6 Uterine Receptivity for Implantation	147
11.7 Endocrinology of Pregnancy	149
11.7.1 Luteo-placental Shift	149
11.7.2 Inhibin	151
11.7.3 Delivery	152
11.8 Legal Aspects	152

12 Infertility Counselling

<i>Louise Bowen and Kay Oke</i>	155
12.1 Introduction	155

12.2	Why Would Anyone Seek or Need Specialised Infertility Counselling	155
12.3	Is Counselling Synonymous with “Assessment”?	156
12.4	Who Does the Counselling?	156
12.5	What Are Common Expressions Indicating Consideration of a Counselling Referral?	157
12.6	When is Infertility Counselling Appropriate	158
12.6.1	Initial Diagnosis of Infertility	158
12.6.2	Waiting List	158
12.6.3	First Treatment Cycle	158
12.6.4	Pregnancy Test	158
12.6.5	Timing of Next Attempt	159
12.6.6	Deciding to Finish IVF Treatment	159
12.7	Should Counselling Be Compulsory for All Couples Seeking IVF?	159
12.8	Are There Particular Treatment Options Necessitating Prior Counselling?	160
12.9	What Are the Particular Issues a Counsellor Would Discuss with Couples Contemplating the Use of Donor Gametes?	160
12.10	What is the Counselling Role of Support Groups?	161
	Subject Index	163
