

Contents

CHAPTER 1

Introduction to Raman Scattering (Derek J. Gardiner)	1
1.1 Historical Introduction	1
1.2 Spontaneous Raman Theory	2
1.3 Resonance Raman Theory	9
1.4 References	12

CHAPTER 2

Raman Sampling (George Turrell)	13
2.1 Introduction	13
2.2 Gaseous and Liquid Samples	16
2.3 Single-Crystal Samples	19
2.4 Excitation Focusing	26
2.5 Collection Optics	27
2.6 Absorbing Samples	31
2.7 Backscattering by Absorbing Samples	35
2.8 Wide-Angle Objectives	37
2.9 Films and Adsorbed Species	43
2.10 Integrated Optics	46
2.11 Excitation with Circularly-Polarized Light	50
2.12 Apologia	53
2.13 References	53

CHAPTER 3

Instrumentation for Raman Spectroscopy (Don L. Gerrard and Heather J. Bowley)	55
3.1 Sample Handling	55
3.2 The Light Source	58
3.3 Optics	63
3.4 The Spectrometer	64
3.5 Detectors and Gratings	70
3.6 Computing	75
3.7 References	76

CHAPTER 4

Calibration and Data Handling (Pierre R. Graves)	77
4.1 Introduction	77
4.2 Analogue-to-Digital Conversion	78
4.3 Frequency Calibration	78
4.4 Frequency Response Calibrations	84
4.5 Methods of Data Analysis	89
4.6 References	101

CHAPTER 5

Non-Standard Physical and Chemical Environments (Derek J. Gardiner)	103
5.1 High Temperature	103
5.2 Low Temperature and Matrix Isolation	106
5.3 High Pressure	109
5.4 Special Chemical Environments	112
5.5 References	117

CHAPTER 6

Raman Microscopy (J. Dave Loudon)	119
6.1 Introduction	119
6.2 Basic Principles of Microprobe Operation	121
6.3 Raman Microprobe Optical Design	121
6.4 Sample Preparation (Discrete Particles and Liquids)	127
6.5 Thermally Sensitive Samples	128
6.6 Environmentally Sensitive Samples	130
6.7 Spatial Resolution and Spatial Filtering	130
6.8 Optical Microscope Illumination Techniques and Applications	134
6.9 Temperature and Pressure Techniques with the Raman Microprobe	140
6.10 Polarization Ratios	142
6.11 Raman Imaging and Mapping	143
6.12 Application Areas	145
6.13 References	150
