Preface	vii
Contents	xi

1. SPECIAL REGULAR GRAPHS

1.1 Edge regular and co-edge-regular graphs	3
1.2 Line graphs	6
1.3 Strongly regular graphs	8
Conference matrices and Paley graphs	10
The Hoffman bound	10
1.4 Strongly regular graphs as extremal graphs	11
1.5 Taylor graphs and regular two-graphs	13
1.6 Square 2-designs	16
1.7 Partial λ -geometries	17
A connection with affine resolvable designs	19
1.8 Hadamard matrices	19
1.9 Hadamard graphs as extremal graphs	20
1.10 Square divisible designs	22
1.11 The bipartite double of a graph	24
The extended bipartite double of a graph	26
1.12 Direct products and Hamming graphs	26
1.13 d -cubes as extremal graphs	27
1.14 Gamma spaces and singular lines	28
1.15 Generalized quadrangles with line size three	29
1.16 Regular graphs without quadrangles	33
1.17 Geodetic graphs of diameter two	38

2. ASSOCIATION SCHEMES

2.1 Association schemes and coherent configurations	43
2.2 The Bose-Mesner algebra	44
The Frame quotient	46
Pseudocyclic association schemes	48
2.3 The Krein parameters	48
2.4 Imprimitivity	51
Dual imprimitivity	52
2.5 Subsets in association schemes	54
2.6 Characterization of the Bose-Mesner algebra	57
2.7 Metric and cometric schemes	58
The Frame quotient in a metric scheme	59
2.8 Subsets of cometric schemes; the Assmus-Mattson theorem	60
2.9 Distribution diagrams and the group case	62
2.10 Translation association schemes	65
Multiplier theorems and cyclotomic schemes	66
Duality	68
Additive codes	71
2.11 Representation diagrams, Krein modules and spherical designs	73

3. REPRESENTATION THEORY

3.1 Nonnegative matrices	80
3.2 Adjacency matrices and eigenvalues of graphs	82
3.3 Interlacing	85
3.4 Gram matrices	86
3.5 Graph representations	87
3.6 The absolute bound	90
3.7 Representations of subgraphs	91
3.8 Graph switching, equiangular lines, and representations of two-graphs	94
3.9 Lattices and integral representations	97
3.10 Root systems and root lattices	98
Fundamental systems and classification	99
The irreducible root lattices	100
Another proof of the classification	102
3.11 Graphs represented by roots of E_8	103
3.12 Graphs with smallest eigenvalue at least -2	106
3.13 Equiangular lines	111
3.14 Root graphs	113
Examples	114
3.15 Classification of amply regular root graphs	116
Amply regular root graphs in E_8	120
Amply regular root graphs with $\mu = 2$	123

4. THEORY OF DISTANCE-REGULAR GRAPHS

4.1 Distance-regular graphs	126
Parameters	126
Eigenvalues	128
Eigenspaces	131
Feasible parameter sets	133
Imprimitivity and the Q-polynomial property	135
Distance transitivity	136
Distance-biregular graphs	138
Weakenings of distance-regularity	139
4.2 Imprimitivity; new graphs from old	139
Imprimitivity	140
Parameters of halved graphs, folded graphs, and covers	141
Structural conditions for the existence of covers	143
Generalized Odd graphs; several P-polynomial structures	145
Distance-regular line graphs	148
Merging classes in distance-regular graphs	149
4.3 Substructures	151
Lines	151
Cubes	152
Moore geometries and Petersen graphs	155
7-point biplanes	156
4.4 Representations of distance-regular graphs	157

5. PARAMETER RESTRICTIONS FOR DISTANCE-REGULAR GRAPHS

5.1 Unimodality of the sequence $(k_i)_i$	167
5.2 Diameter bounds by Terwilliger	169
5.3 Godsil's diameter bound. Graphs with $b_i = 1$	171
5.4 Restrictions for $\mu > 1$	173
5.5 Further restrictions from counting arguments	174
5.6 Graphs with small k_d	179
5.7 The case $p_{dd}^2 = 0$	181
5.8 A lower bound for p_{22}^2	183
5.9 Ivanov-Ivanov Theory	184
5.10 Circuit chasing	191

6. CLASSIFICATION OF THE KNOWN DISTANCE-REGULAR GRAPHS

6.1 Graphs with classical parameters	193
6.2 Computation of classical parameters	195
6.3 Imprimitive graphs with classical parameters; partition graphs	197
6.4 Regular near polygons	198
6.5 Generalized polygons	200
6.6 Other regular near polygons	205
6.7 Moore graphs	206
6.8 Moore geometries	207
6.9 Cages	209
6.10 The remaining primitive graphs	210
6.11 Bipartite distance-regular graphs; imprimitive regular near polygons	211
6.12 Antipodal distance-regular graphs	212

7. DISTANCE-TRANSITIVE GRAPHS

7.1 Some elementary group theory	214
7.2 The Thompson-Wielandt Theorem	216
7.3 A diameter bound for distance-transitive graphs	218
7.4 The case of large girth	221
7.5 Graphs with small valency	221
7.6 Imprimitive distance-transitive graphs	225
2-transitive square designs	226
2-transitive Hadamard matrices	227
2-transitive regular two-graphs	228
7.7 Towards the classification of all distance-transitive graphs	229
7.8 Further transitivity in graphs	231
Distance-transitive digraphs	232
Infinite distance-transitive graphs	232

8. Q-POLYNOMIAL DISTANCE-REGULAR GRAPHS

8.1 Leonard's characterization of Q -polynomial graphs	235
Recurrence relations for Q -sequences	237
Reduction of parameters	240

8.2	Imprimitive Q -polynomial distance-regular graphs	241
8.3	Further results on Q -polynomial graphs	244
	Q -polynomial distance-regular graphs as extremal graphs	244
	Explicit formulae for eigenmatrices, eigenvalues, and multiplicities	245
	Integrality of eigenvalues	247
	Bounds for girth and diameter	248
8.4	Graphs with classical parameters	249
	A characterization of graphs with classical parameters	249
8.5	The known Q -polynomial distance-regular graphs	252
9. THE FAMILIES OF GRAPHS WITH CLASSICAL PARAMETERS		
9.1	Johnson graphs	255
	Characterizations by structure	256
	Characterization by parameters	258
	Folded Johnson graphs	259
	Odd graphs and doubled Odd graphs	259
9.2	Hamming graphs	261
	Geometric characterization	262
	Characterization by parameters - Pseudo Hamming graphs	262
	Characterization by spectrum	263
	Halved and folded cubes	264
	Covers of cubes and folded cubes - the Wells graph	266
9.3	Grassmann graphs	268
	Characterization by structure	270
	Characterization by parameters	271
	Graphs related to Grassmann graphs	272
9.4	Dual polar graphs	274
	Geometric characterization	276
	Characterization by parameters	277
	Related graphs	278
9.5	Sesquilinear forms graphs	280
	Bilinear forms graphs	280
	Alternating forms graphs	282
	Hermitean forms graphs	285
	Symmetric bilinear forms graphs	285
	Affine subspaces of dual polar spaces	286
	Antipodal covers	288
9.6	The quadratic forms graphs	290
10. GRAPHS OF COXETER AND LIE TYPE		
10.1	Coxeter systems	294
	The Coxeter group as a reflection group	296
	The length function; reduced expressions	296
	The word problem in Coxeter groups	297
	Bruhat order	298
10.2	Coxeter graphs	299
	The neighbourhood of a point	299

The 2-neighbourhood of a point	301
Subgraphs from subdiagrams	303
Objects and their shadows	304
Association scheme and double coset diagram	306
Product expressions for k and v	308
Incidence graphs	309
10.3 The finite Coxeter graphs; root systems and presentations	310
Root systems	310
10.4 Global properties	315
Finiteness	315
Diameter and permutation rank	316
Amply regular Coxeter graphs	318
Distance-regular Coxeter graphs	319
Multiplicity-free representations	320
10.5 Tits Systems	323
The association scheme of a Tits system	325
Nonexistence results	326
10.6 Graphs of Lie Type	326
Subgraphs from subdiagrams	327
Objects	327
Lines	327
Singular lines	328
Transitivity properties	329
Relation between a graph of Lie type and the associated Coxeter graph	329
Incidence graphs	332
10.7 Chevalley Groups	332
Graphs of Lie Type from Chevalley groups	334
Parameters	336
Computation of the parameters of $E_{7,7}(q)$ - geometric approach	339
10.8 The affine E_6 graph	340
10.9 Distance-transitive representations of Chevalley groups	341

11. GRAPHS RELATED TO CODES

11.1 Completely regular codes	345
Codes in distance-regular graphs	345
Completely regular partitions and distance-regular quotient graphs	350
Distance-regular graphs with regular abelian automorphism groups	353
Completely regular codes in the Hamming scheme	354
Completely regular codes in other distance-regular graphs	357
11.2 Graphs from the Kasami codes	358
11.3 Graphs from the Golay codes	359
The coset graph of the extended ternary Golay code	359
The coset graph of the ternary Golay code	360
The coset graph of the truncated ternary Golay code	360
The coset graph of the extended binary Golay code	360
The coset graph of the binary Golay code	361
The coset graph of the truncated binary Golay code	362

The coset graph of the doubly truncated binary Golay code and the graph of the unitals in $PG(2,4)$	363
Variations on the theme of coset graph - some antipodal covers	364
11.4 Graphs related to the Witt designs	366
The Witt graph associated to M_{24}	366
The truncated Witt graph associated to M_{23}	367
The doubly truncated Witt graph associated to M_{22}	368
The Ivanov-Ivanov-Faradjev graph	369
Higman's symmetric design	370
The Leonard graph - $M_{12,2}$ over $PGL(2,11)$	371
The Hadamard association scheme	371
Antipodal 2-covers of the Gewirtz graph	372
The regular two-graph on 276 vertices and the McLaughlin graph	372
11.5 The van Lint-Schrijver partial geometry	373
 12. GRAPHS RELATED TO CLASSICAL GEOMETRIES	
12.1 The even orthogonal case; the Doro graph	374
12.2 The odd orthogonal case	380
12.3 The Coxeter graph for $PSL(2,7)$	382
12.4 The unitary case	383
12.5 Antipodal covers of complete graphs	385
12.6 Thin near octagons from Denniston's complete arcs	387
12.7 Antipodal covers of complete graphs from pseudocyclic association schemes	388
Cyclotomic schemes	389
The Mathon and Hollmann schemes on 28 points, and conics in $PG(2,q)$	390
The Hollmann scheme on 496 points	390
 13. SPORADIC GRAPHS	
13.1 Graphs related to the Hoffman - Singleton graph	391
Sylvester's double six graph	394
13.2 Commuting involutions graphs and Fischer spaces	395
Five antipodal 3-covers	397
The Foster graph for $3\text{-Sym}(6,2)$ and the hexacode	397
The Conway-Smith graph for $3\text{-Sym}(7)$	399
The locally $GQ(4,2)$ graph on 3×126 points	399
The $3.O_7(3)$ graph on 3×378 points	400
13.3 The Perkel graph for $L(2,19)$	401
13.4 The Biggs-Smith graph for $L(2,17)$	403
13.5 The Livingstone graph for J_1	406
13.6 The near octagon associated with the Hall-Janko group	408
13.7 The Patterson graph for Suz	410

14. TABLES OF PARAMETERS FOR DISTANCE REGULAR GRAPHS 413

A. APPENDIX

A.1 Graphs 433

A.2 Permutation groups 435

A.3 Automorphisms 435

A.4 Regular partitions, distribution diagrams and double coset graphs 436

A.5 Primitivity 437

A.6 Designs 438

A.7 Codes 440

A.8 Singular subspaces 440

A.9 Geometries 441

A.10 Miscellaneous notation 442

References 444

Symbols and notation 477

Intersection arrays 480
