Chapter 1. Pathogenesis, Predisposing Factors, Presentation and Methods of Examination	1
Definition	1
Pathogenesis	1
The Vitreous	2
Retinal Breaks	3
Retinal Detachment	3
Natural History	6
Predisposing Factors	6
Rhegmatogenous Retinal Detachment	11
Classical Symptoms	11
Other Symptoms	13
Techniques of Examination	14
Indirect Ophthalmoscopy and Scleral Depression	15
Direct Ophthalmoscopy	21
Visual Fields	21
Other Investigations	21
References	24
 Chapter 2. Preoperative Examination	 27
Initial Slit-Lamp Examination	27
Cornea	27
Anterior Chamber	27
Iris	28
Lens	29
Retrolental Space	30
Anterior Vitreous	31
Indirect Ophthalmoscopy of the Posterior Segment	31
Anatomical Landmarks	31
Details of Retinal Detachment	34
Peripheral Retinal Degenerations	42
Benign Peripheral Lesions	43

Lesions That May Predispose to Retinal Detachment	47
Retinoschisis	48
Three-Mirror Examination	51
Angle of Anterior Chamber	51
Vitreous	51
Retinal Details and Vitreo-retinal Relationships	52
Characteristics of Various Types of Retinal Detachment	57
Aphakic Detachment	57
Dislocated or Subluxated Lenses	58
Retinal Dialysis	59
Giant Retinal Breaks	60
Macular Breaks	62
Retinoschisis Complicated by Detachment	63
Uveal Colobomas	64
Differential Diagnosis of Rhegmatogenous Retinal Detachment	64
Retinoschisis and Retinal Detachment	65
Non-rhegmatogenous and Rhegmatogenous Retinal Detachment	66
References	67
Chapter 3. Preoperative Management and Operative Planning ..	71
Preoperative Management	71
Immobilisation of the Eye	71
Medical Treatment	73
Removal of Infected Buckles	73
Selection of Operative Procedure	73
Methods of Adhesion	74
Scleral Buckles	75
Non-drainage Operation	82
Indications for the Drainage of Subretinal Fluid	84
Intravitreal Injections	85
Conventional Surgery in Special Cases	88
Rhegmatogenous Detachment Without Apparent Breaks	88
Retinoschisis Complicated by Retinal Detachment	89
Retinal Detachment Complicated by Proliferative Vitreo- retinopathy	90
Indications for Vitrectomy	91
Prophylactic Surgery	98
Retinal Breaks	98
Retinal Degenerations	99
Other Indications	100
Summary	100
References	101
Chapter 4. Surgical Details	105
Initial Dissection	105
The Lids	105
The Cornea	105

Conjunctival Incision	105
Isolation of Muscles and Exposure of Sclera	106
Order of Procedure	107
Cryotherapy	108
Operative Complications	109
Localisation of Retinal Breaks	111
Buckle Sutures	113
Placement	113
Local Explants	116
Encircling Bands	116
Combined Local and Encircling Procedures	117
Handling a Sponge Explant	118
Drainage of Subretinal Fluid	118
Selecting a Site	118
Technique	119
Complications	121
Tightening the Buckle Sutures	123
Problems in Placing the Buckle	124
Intravitreal Injection of Gas	125
Technique	126
Operative Complications	128
Closure of the Wound	129
Methods of Prophylactic Treatment	129
Laser Photocoagulation	130
Cryotherapy	131
Complications	131
References	132

Chapter 5. Postoperative Management, Complications and

Failure	133
Mobilisation	133
External Signs	133
Postoperative Activity	134
Recovery of Vision	135
The Cryotherapy Lesion	135
Behaviour of Subretinal Fluid	136
Early Complications	137
Sudden Blindness	137
Infection	137
Previous Corneal Grafts	138
Anterior Segment Ischaemia	138
Sterile Uveitis	139
Glaucoma	140
Postoperative Complications of Intravitreal Gas	141
Choroidal Detachment	142
Vitreous Haemorrhage	144
Exudative Retinal Detachment	144
Late Complications	145
Cosmesis	145

Explant Extrusion and Infection 145

Intraocular Erosion of Explants 146

Postoperative Pain 147

Postoperative Diplopia 147

Refractive Changes 147

Intraocular Changes 148

Failure in Retinal Detachment Surgery 151

 Surgery of Failed Cases 153

 Follow-up of Patients 155

References 156
