

Table of Contents

§0.	<u>Preliminaries.</u>	1
§0.1:	Introduction	1
§0.2:	Notation and Conventions	20
§1.	<u>Foundations.</u>	23
§1.1:	Metrics on Projective Space	23
§1.2:	Parametrization by Power Series	30
§1.3:	The Jacobian Construction Principle	48
§1.4:	The Maximum Modulus Principle	50
§2.	<u>The Canonical Distance.</u>	56
§2.1:	The Canonical Distance on Curves	56
§2.2:	Néron's Local Height Pairing	74
§2.3:	Special Formulas in the Archimedean Case	79
§2.4:	Special Formulas in the Nonarchimedean Case	89
§2.5:	The Triangle Inequality	122
§3.	<u>Local Capacity Theory - Archimedean Case.</u>	133
§3.1:	Capacity Theory for Compact Sets	133
§3.2:	Green's Functions	155
§3.3:	Approximation Theorems	165
§4.	<u>Local Capacity Theory - Nonarchimedean Case.</u>	185
§4.1:	Capacity Theory for Compact Sets	185
§4.2:	The Decomposition of RL-Domains	220
§4.3:	Algebraic Capacitability	258
§4.4:	Green's Functions	277
§4.5:	Approximation Theorems	311
§5.	<u>Global Capacity Theory.</u>	320
§5.1:	The Global Capacity	320
§5.2:	Examples of Capacities and Green's Functions	338
§6.	<u>Applications.</u>	373
§6.1:	The Classical Fekete and Fekete-Szegö Theorems	373
§6.2:	Construction of the Global Mapping Functions	380
§6.3:	The Fekete and Fekete-Szegö Theorems on Curves	414
§6.4:	Some Counterexamples	418
	<u>References.</u>	423
	<u>Subject Index.</u>	429
