Contents

Oxygen

O₂ Evolution and Uptake Measurements in Plant Cells by Mass Spectrometry

H. P. FOCK and D. F. SÜLTEMEYER (With 8 Figures)

1	Introduction	3
2	Theory	3
2.1	Determination of U_0	3
2.2	Determination of E_0	5
2.3	Determination of DR	6
2.4	Correction of E_0 and U_0 Against Withdrawal of Gas	6
3	Equipment	7
3.1	Mass Spectrometers	7
3.2	Inlet Systems	8
4	O ₂ Exchange of Higher Plants (Whole Plants, Single Leaves)	9
4.1	Determination of U_0 and E_0 over Long Periods of Time	9
4.2	Determination of U_0 and E_0 over Short Time Intervals	11
5	O ₂ Exchange of Aquatic Suspensions (Algae, Chloroplasts)	12
5.1	Determination of U_0 and E_0 over Long Periods of Time	13
5.2	Determination of U_0 and E_0 over Short Time Intervals	13
	References	16

Microassay of O₂ Evolution from Single Plant Cells

R. HAMPP and W. MEHRLE (With 14 Figures)

1	Introduction	19
2	Historical Background	20
3	Culture, Preparation and Incubation of Bacteria and Protoplasts	20
3.1	Bacteria	20
3.2	Isolation of Protoplasts	21
3.3	Evacuolation and Electrofusion of Protoplasts	21
3.4	Assay of Photosynthetic Oxygen Evolution	22
4	Evaluation of the Microtechnique	22
4.1	Microphotographic Studies	22
4.2	Discrimination Between Aerotactic and Chemotactic Responses	24
4.3	Semiquantitative Assay of Changes in O ₂ Concentration	26

4.4 Kinetic Studies	26
5 Applications	31
5.1 Protoplast Viability as Assayed with <i>Pseudomonas</i> Versus Conventional Techniques	31
5.2 Integrity of Manipulated Protoplasts and Hybrids of Mesophyll Cells After Electrofusion	34
6 Summary	36
References	39

O₂ Exchange Measurement Using a Platinum Polarographic Electrode

W. VIDAVER and S. SWENSON (With 3 Figures)

1 Introduction	41
1.1 Basic Components of a Polarographic System	41
1.2 O ₂ Exchange Measurements	42
2 Polarographic Principles	42
2.1 Basic Principles	42
2.2 O ₂ Reduction	43
2.3 The Silver Anode and Electrolyte Medium	45
3 Electrode Systems	45
3.1 The Membrane-Covered (Clark-Type) Electrode	45
3.2 The Bare Electrode	47
3.3 Choice of Electrode Type	48
3.4 The Modulated Polarographic Electrode	49
3.5 Improvements in Bare Platinum Electrode Systems	49
4 Photosynthesis Studies	50
4.1 Photosynthetic Action Spectra	50
4.2 Chromatic Transients	50
4.3 O ₂ Evolution and the S-State Hypothesis	51
4.4 Measurement of the Activity of O ₂ -Evolving Particles	52
4.5 Hydrostatic Pressure Effects	52
4.6 Electron Transfer Reactions	53
4.7 Simultaneous Measurement of O ₂ Exchange and Variable Chlorophyll a Fluorescence	53
4.8 Light-Dependent O ₂ Uptake	54
4.9 Measurement of Oxygen Evolution by Leaf Discs (The Hansatech Electrode)	55
5 The Future of Polarographic O ₂ Exchange Measurement	55
6 Commercial Suppliers of Polarographic Systems	55
6.1 Clark-Type Systems	55
6.2 The Hansatech Electrode	55
6.3 Bare Electrode Systems	56
References	56

Measurement of O₂ Evolution in Chloroplasts

Y. INOUE (With 5 Figures)

1 Introduction	62
2 The Principle of Polarographic O ₂ Electrode	62
3 Reaction Vessels and Electronic Circuits	63
4 General Directions for Measurement of O ₂ Evolution	66
5 Additional Remarks	67
6 Typical Experimental Conditions	69

Carbon Dioxide

Analytical Gas Exchange Measurements of Photosynthetic CO₂ Assimilation

T. D. SHARKEY (With 3 Figures)

1 Introduction	73
1.1 Historical Perspective	73
1.2 Current Interest	74
2 The Basic Measurements	74
2.1 Units	74
2.2 Combined Gas Exchange and Biochemical Measurements	76
3 Measuring CO ₂ Uptake	76
3.1 Compensating Systems	77
3.2 Differential Systems	77
3.3 Combined Systems	78
3.4 Kinetic Systems	78
3.5 CO ₂ Analyzers	78
3.6 Considerations for Handling CO ₂	81
3.7 CO ₂ Source Gas	81
3.8 CO ₂ Absorbers	81
4 Measuring Water Loss	81
4.1 Differential Systems	82
4.2 Closed Systems	82
4.3 Water Vapor Detectors	83
4.4 Considerations for Handling Water Vapor	85
4.5 Water Vapor Absorbers	85
5 Vapor Pressure Difference	86
5.1 Humidity in the Air	86
5.2 Humidity Inside the Leaf	87
6 Chambers	88
7 Putting the System Together	88

7.1 Mass Flow Meters 89

7.2 Barometer 89

7.3 Tubing Fittings 89

8 Three Different System Designs 89

8.1 Laboratory-Based System 89

8.2 Expedition Size Field System 90

8.3 Personal Size Portable System 91

Appendix 91

Respiration Measurements in Plant Roots Throughout Development

A. M. JOHNSON-FLANAGAN (With 3 Figures)

1 Introduction 94

2 Defining the Problem 94

3 Mitochondria 95

3.1 Factors Affecting Respiratory Measurements 95

3.2 Isolation of Mitochondria 96

4 Root Segments 97

4.1 Factors Affecting Respiratory Measurements 97

5 Intact Excised Roots 101

6 Intact Plants 102

7 Roots Grown in Liquid Culture 102

8 Problems Associated with Inhibitors 102

8.1 Disulfiram 102

8.2 SHAM 103

8.3 Antimycin A 103

8.4 Uncouplers 104

9 Measuring Respiration Rates 104

9.1 Apportioning Respiratory Activity 104

9.2 Rotenone-Resistant Respiration 107

10 Adjunct Methods 107

References 108

Water Vapor

Psychrometric Water Potential Analysis in Leaf Discs

D. M. OOSTERHUIS and S. D. WULLSCHLEGER (With 5 Figures)

1 Introduction 113

2 Theory of Thermocouple Psychrometers 113

2.1 Concepts of Water Potential	113
2.2 Principles of Operation	114
3 Types of Thermocouple Psychrometers	116
4 Psychrometric Method	116
4.1 Preparation of Psychrometers	116
4.2 Calibration	117
4.3 Measurement Procedure	117
4.4 Temperature and Vapour Pressure Equilibration	118
5 Techniques for Sampling Leaf Discs	118
5.1 Leaf Selection for Tissue Sampling	119
5.2 Location and Selection of Leaf-Disc Samples	119
5.3 Method of Leaf-Disc Excision	120
5.4 Effects of Evaporative Losses	121
5.5 Use of Multiple Leaf Discs	121
5.6 Handling of Leaf Discs	121
6 Components of Leaf Water Potential	122
7 Interpretation of Psychrometric Water Potential Measurements	123
7.1 Accuracy of Psychrometer Measurements	123
7.2 Types of Leaf Material	125
7.3 Water Potential Changes Following Leaf-Disc Excision	125
7.4 Leaf Tissue in Relation to the Size of the Sample Chamber	125
7.5 Water Adsorption by Thermocouple Psychrometer Assemblies	126
7.6 The Cut Edge and Evaporative Losses During Sampling	126
7.7 Thermal Gradients and Zero Offsets	127
7.8 Problems Associated with Equilibration Times	128
7.9 Interpretation of the Psychrometer Output Plateau	128
7.10 Considerations for Statistical Analysis	129
7.11 Consistency in Methodology	129
8 Conclusion	129
Appendix	130

In Situ Measurement of Plant Water Potential

N. L. SCHAEFER (With 9 Figures)

1 Introduction	134
1.1 Background	134
1.2 Measurement Theory	134
1.3 Measurement Methods	135
2 Vapour Transfer Methods	135

2.1	Introduction	135
2.2	General Principles	136
2.3	Practical Aspects	136
3	Psychrometry	139
3.1	Principles	139
3.2	Psychrometric Methods	140
3.3	Peltier Cooled (Spanner) Psychrometers	140
3.4	Wet Loop or Droplet Psychrometer	148
4	Dew Point Methods	148
4.1	Introduction	148
4.2	Four-Wire Hygrometer	149
4.3	Pulsed Dew Point Hygrometer	151
4.4	Continuous Monitoring	154
4.5	Comparison of Dew Point Methods	154
4.6	Dew Point Versus Psychrometric Methods	154
5	In Situ Measurement at Particular Sites	155
5.1	Leaf	155
5.2	Stem	155
5.3	Roots	156
6	Conclusion and Final Recommendation	157
	Appendix	158
	References	158

Dehydration and Rehydration During Pollen Development, Pollination, and Fertilization

J. F. JACKSON (With 1 Figure)

1	Introduction	162
2	Flower Development	163
3	Dehydration of Pollen	164
3.1	Dehydration During Development	164
3.2	Dehydration of Pollen After Anthesis and Some Consequences of Dehydration	166
4	Pollination and Rehydration of Pollen	167
5	Water Potential and Its Measurement in Reproductive Tissues	168
6	Humidity Measurement	170
7	Measurement of Water Content	171
7.1	^1H -NMR	171
7.2	^1H -NMR Imaging	172
7.3	^{31}P -NMR for Membranes	172
7.4	Freeze Fracture Replicas for Membranes	173
7.5	Calorimetric Analysis	173

7.6 Other Methods	173
8 Summary	174
References	174

Exchange Determination of Water Vapor, Carbon Dioxide, Oxygen, Ethylene, and Other Gases of Fruits and Vegetables

S. BEN-YEHOSHUA and A. C. CAMERON (With 4 Figures)

1 Introduction	177
2 Physical Laws of Gas Diffusion	178
3 Steady State Determination of Parameters of Gas Exchange	178
3.1 Theoretical Basis	178
3.2 Determination of Surface Area	179
3.3 Determination of the Rate of Flux	180
3.4 Determination of the Concentration Gradient	181
3.5 Calculation of Permeability Coefficients	183
4 Nonsteady State Methods for Determination of Resistance to Gas Diffusion	183
5 Morphology and Other Gas Exchange Methodologies	184
6 Applications of Methodology	185
6.1 Studying Paths of Gas Exchange Through Stem Scar, Stomata, Cuticle, and Lenticels	185
6.2 Effects of Individual Seal-Packaging and Waxing on Gas Exchange of Fruits	188
6.3 Resistance Network Approach	189

Nitrogen

Methods for Measurement of Dinitrogen Fixation in Microorganisms and Symbiotic Systems

D. J. D. NICHOLAS (With 6 Figures)

1 Introduction	197
2 Determination of N_2 Fixation by Increases in Total Nitrogen	197
2.1 Digestion of Samples by a Microkjeldahl Procedure	198
2.2 Analysis of Ammonia by Distillation Followed by Titration	198
3 Use of $^{15}N_2$ to Determine Dinitrogen Fixation	198
3.1 Preparation of $^{15}N_2$ from ^{15}N -Labelled Ammonium Salts	199
3.2 Exposure of Samples to $^{15}N_2$ Gas Mixtures	203
3.3 Conversion of $^{15}NH_4^+$ to $^{15}N_2$ for Analysis in a Mass Spectrometer	204
3.4 Analysis of $^{15}N_2$ Data	207
3.5 Analysis of ^{15}N Abundance by Emission Spectrometry	208

4 Use of $^{13}\text{N}_2$ to Determine Dinitrogen Fixation	209
4.1 Cyclotron Methods	209
4.2 Linear Accelerator	210
References	211

Methods for Uptake and Assimilation Studies of Nitrogen Dioxide

H. S. SRIVASTAVA, D. P. ORMROD, and B. H. MARIE (With 3 Figures)

1 Introduction	213
2 Nitrogen Dioxide Uptake	213
2.1 Gas Flux Studies	214
2.2 Nitrogenous Compound Extraction and Determination	218
2.3 ^{15}N Studies	219
2.4 Comparative Rates of Nitrogen Dioxide Uptake	220
3 Nitrogen Dioxide Assimilation	220
3.1 Increase in Organic Nitrogen	221
3.2 Increase in Nitrogen Pathway Enzymes	221
3.3 Nitrogen Dioxide as a Plant Nutrient	223
References	224

Immunological Detection of Nitrogenase

G. SARATH and F. W. WAGNER

1 Introduction	227
2 Characteristics of the Nitrogenase Complex	227
3 Purification of Nitrogenase for Antibody Production	228
3.1 Immunological Techniques	229
3.2 Immunological Relationships of Nitrogenases	230
3.3 Immunodetection of Nitrogenase	231
3.4 Immunodetection by Western Blotting	232
3.5 Quantitation of Nitrogenase on Western Blots	234
4 Conclusions	235
Appendices	235
References	237

Analysis of Volatile Nitrogen (NO and NO_2) Release from Plants

J. V. DEAN and J. E. HARPER (With 5 Figures)

1 Introduction	240
1.1 $\text{NO}_{(\text{x})}$ Emissions from Herbicide-Treated Soybean	240
1.2 Association of $\text{NO}_{(\text{x})}$ Evolution with the NR Enzyme	241
2 Volatile N Carried in Water Vapor from Intact Plants	242
3 Methods of Detecting N Oxides	243

3.1 Greiss-Saltzman Colorimetric Assay	243
3.2 Gas Chromatography (GC)	245
3.3 Gas Chromatography-Mass Spectrometry (GC-MS) Assay Conditions	249
References	251

Other Gases

Hydrogen-Oxidizing Bacteria: Methods Used in Their Investigation

D.J. ARP (With 3 Figures)

1 Introduction	257
2 Methods for the Determination of H ₂ -Oxidizing Activity	258
2.1 Practical and Theoretical Considerations in the Use of H ₂ as a Reagent	258
2.2 Gas Chromatographic Assay of H ₂ -Oxidizing Activity	260
2.3 Spectrophotometric Assay of H ₂ -Oxidizing Activity	262
2.4 Amperometric Determination of H ₂ -Oxidizing Activity	264
2.5 Use of ³ H ₂ in the Measurement of Hydrogenase Activity	265
2.6 Mass Spectrometric Measurements of H ₂ Metabolism	268
2.7 Other Methods for Measuring Activity of Hydrogenases	269
3 Methods Other Than Activity Determinations	270
4 Summary	272
References	272

Methane Estimation for Methanogenic and Methanotropic Bacteria

M. R. SMITH and L. BARESI (With 3 Figures)

1 Introduction	275
2 Cultivation	276
3 Methods for Estimating Methane	277
3.1 Sampling Procedures	277
3.2 Gas Chromatographic Analysis of Gases and Substrates	277
3.3 Isotope Methods for Gases	285
4 Methods for Methanogenic Bacteria	293
4.1 Preparing Methanogenic Cell Suspensions and Extracts	293
4.2 Enzymatic Methane Production	295
5 Methods for Methanotropic Bacteria	297
5.1 Respirometric Analysis	297
5.2 Methane Monooxygenase Activity	298
6 Calculating Methane and Other Gases	299

Determination of Extra- and Intracellular pH Values in Relation to the Action of Acidic Gases on Cells

H. PFANZ and U. HEBER (With 7 Figures)

1 Introduction	322
2 Methods and Applications	325
2.1 pH-Measurements in Leaf Extracts with Glass Electrodes	325
2.2 Intracellular pH Measurements with Microelectrodes	326
2.3 Distribution of Weak Acids: pH in Neutral or Alkaline Cellular Compartments	327
2.4 Distribution of Weak Bases: pH in Acidic Cellular Compartments	330
2.5 Fluorescent pH Indicators and pH-Sensitive Dyes	331
2.6 ^{31}P -Nuclear Magnetic Resonance (^{31}P -NMR)	334
2.7 Metabolite Determinations	336
3 Conclusions	337
