Kurzfassung	XXV
Abstract.....	XXXIII

1 Introduction and State of Research..... 1

1.1 Conventional Diesel Combustion	5
1.2 Alternative Diesel Combustion.....	9
1.2.1 HCCI.....	13
1.2.2 HPLI.....	15
1.2.3 HCLI	15
1.2.4 DCCS	15
1.2.5 PCCI.....	16
1.3 The Disadvantage of Conventional Diesel Combustion on Soot and Nitrogen Oxide.....	16
1.4 Specification of the Two-Stage Ignition Delay.....	20
1.5 Empirical Ignition Delay Model	23

2 Thermodynamic Basics to Evaluate PCCI Measurements 27

2.1 The Diesel Cycle and the Benefits of Thermal Efficiency.....	33
--	----

2.2	Rate of Heat Release and Burn Rate to Characterize the Combustion Process.....	39
2.3	Premixed Combustion: The Positive and Negative Influence on Emission.....	42
2.4	Gas Exchange Calculation	44
3	Single-Cylinder Test Bench and Measurement Equipment.....	47
3.1	Particulate Matter Measurement	50
3.2	Nitrogen Oxide Measurement.....	52
3.3	Additional Pollutant Measurement	54
3.4	Injection System Measurement.....	56
3.5	Indication System for Intake, Exhaust, and In-Cylinder Pressure Measurement.....	60
4	Test Bench Measurements and Analysis	63
4.1	Single-Cylinder Mercedes Benz OM642	63
4.2	Introduction to the Test Bench Measurements and the Ignition Delay for PCCI	65
4.3	Premixed Charge Compression Ignition Measurements.....	68
4.3.1	Pre-Injection Variation.....	71
4.3.2	EGR Rate Variation	73
4.3.3	Main-Injection Variation.....	75
4.3.4	Intake Air Temperature Variation.....	77
4.3.5	Fuel Pressure Variation.....	80
4.4	Conventional Diesel Measurements.....	82
4.5	Evaluation, Discussion and Comparison of PCCI and Conventional Diesel Injection Strategies Concerning Combustion and Engine-Out Emissions	85

**5 Empirical Based Model to Depict Ignition Delays for
PCCI 97**
