1	Introduction	1
1.1	Uncertainty in Real World Robotics	1
1.2	The Autonomous City Explorer Robot	2
1.3	Contributions and Thesis Outline	3
2	Simultaneous Localization Mapping and Tracking of Moving Objects	8
2.1	Robot Motion	8
2.1.1	Velocity Motion Model	9
2.1.2	Odometry Motion Model	10
2.2	Map Representations	12
2.2.1	Feature-based representations	12
2.2.2	Occupancy Grid Maps	13
2.3	Simultaneous Localization And Mapping	16
2.3.1	EKF-SLAM	18
2.3.2	Rao-Blackwellized Grid-based SLAM	22
2.4	Moving Object Tracking with Incrementally Constructed Maps	25
2.4.1	Conditional Particle Filters	25
2.4.2	Data Association	26
2.5	Experimental Results	28
2.6	Summary	29
3	Autonomous Robotic Exploration with Active Sensing	31
3.1	Related Work	32
3.2	Information-Based Gaze Direction Planning for SLAM	34
3.2.1	Measuring Information	35
3.2.2	Planning Algorithm	37
3.3	Combined Trajectory Planning and Gaze Direction Control	39
3.3.1	Gaze Direction Control	40
3.3.2	Motion Planning	41
3.4	Results	43
3.4.1	Gaze Direction Planning	43
3.4.2	Combined Approach	46
3.5	Conclusion	51
4	Bayesian Framework for State Estimation and Behavior Selection	53
4.1	Related Work	54
4.2	Bayesian Framework	57
4.2.1	Prediction	58

4.2.2	Correction Step	60
4.2.3	Estimation of Behavior Probabilities	61
4.3	Application to Autonomous Robotic Exploration	62
4.3.1	System Behavior Description	63
4.3.2	Behavior Selection	67
4.3.3	Behavior Selection Model	68
4.4	Experimental Results	69
4.5	Conclusion	72
5	Learning Probabilistic Behavior Models from Humans	74
5.1	Related Work	75
5.2	Overview of the Proposed Learning Scheme	77
5.3	Support Vector Machines	79
5.3.1	Multi-Class Support Vector Machines	85
5.3.2	Probability Estimates for Multi-Class Support Vector Machines	87
5.4	Training the Classifier	88
5.5	Results	90
5.6	Conclusion	95
6	The Autonomous City Explorer Robot	98
6.1	System Description	100
6.2	Navigation System of the <i>ACE</i> robot	101
6.2.1	Processing Layer	102
6.2.2	Control Layer	104
6.2.3	Execution Layer	109
6.3	System Interdependence Analysis	110
6.3.1	Performance Indicators	112
6.3.2	All Performance Indicators at a Glance	114
6.3.3	Learning Bayesian Network Structure from Data	115
6.3.4	Information-Theoretic Criteria	117
6.3.5	Online Applicability	117
6.4	Experimental Results	118
6.4.1	Large-Scale Mapping of Urban Environments	119
6.4.2	Path Planning and Robot Behaviors	120
6.4.3	Interdependence Analysis	125
6.5	Conclusion	129
7	Conclusions and Future Directions	134
7.1	Concluding Remarks	134
7.2	Outlook	137
	Bibliography	141
