

Table of Contents

List of Symbols and Abbreviations	ix
List of Figures	xi
List of Tables	xv
1 Introduction	1
2 State of the art	3
2.1 Laser tissue interaction	3
2.1.1 The process of tissue ablation with pulsed lasers	8
2.2 Lasers as scalpels in various surgical specialties	10
2.3 Challenges of laser surgery	12
2.3.1 Optical techniques for tissue discrimination	13
2.3.2 Tissue elemental composition	14
2.3.3 Healthy and cancerous tissues	15
2.4 Techniques for monitoring the elemental distributions in tissues	16
2.5 Laser-induced Breakdown Spectroscopy (LIBS)	17
2.5.1 Fundamentals of LIBS	17
2.5.2 Quantitative LIBS based on calibration-curve	23
2.5.3 Calibration-free LIBS (CF-LIBS) for quantitative analysis	23
2.5.4 Applications of LIBS	28
2.5.5 Other studies of LIBS as diagnosis tool for biological applications	30
2.6 Classification of LIBS spectra	31
2.6.1 Principal Component Analysis (PCA)	32
2.6.2 Linear Discriminant Analysis (LDA)	32
2.6.3 Binary classification model using Receiver Operating Characteristics (ROC)	34
3 Objective	37
4 Experimental setup and methods	41
4.1 Preparation of experimental tissue samples	41
4.2 Experimental setup	43
4.3 Classification of tissue LIBS spectra	45
4.3.1 Pre-processing of LIBS spectral data	46
4.3.2 Principal Component Analysis (PCA)	47
4.3.3 Linear Discriminant Analysis (LDA)	47
4.3.4 Binary classification model using Receiver Operating Characteristics (ROC)	47

5	Measurements of elements in ex-vivo porcine-tissues using LIBS	49
5.1	Soft tissues	50
5.1.1	Nerve	50
5.1.2	Parotid Gland	52
5.1.3	Fat	53
5.1.4	Muscle	54
5.1.5	Skin	55
5.2	Soft and hard bone tissues	56
5.2.1	Cortical Bone	56
5.2.2	Cancellous Bone	57
5.2.3	Cartilage	59
5.3	Dental tissues	59
5.4	Summary measurement of elements in tissue using LIBS	62
6	Statistical classification models for soft and hard tissue differentiation	63
6.1	Nerve and Gland	63
6.2	Nerve and Fat	67
6.3	Cortical Bone and Cartilage	75
6.4	Dental, Bone and soft tissues of the oral cavity	78
6.5	Tissue type mapping based on classification	84
6.6	LIBS based tissue differentiation in combination with a surgical Er:YAG laser	87
6.7	Summary of statistical classification models for soft and hard tissue differentiation	93
7	Transfer study of ex-vivo tissue differentiation model from Porcine to Mice tissues	95
7.1	Comparison of the LIBS spectra of mice and porcine tissues	96
7.2	Classification performance of the Porcine model on Mice tissue spectra	99
7.3	Summary of transferability of classification model from Porcine to Mice tissues	101
8	Two-dimensional(2D) mapping of elements as an imaging modality	103
8.1	Elemental distribution as an imaging modality	103
8.2	Fresh tissues	105
8.2.1	Tumor with bulged surface	105
8.2.2	Tumor with flat surface	108
8.3	Processed tissues	112
8.3.1	Paraffin embedded mouse tissues	112

8.3.2	Epoxy-resin embedded mouse tissues	116
8.4	Summary of two-dimensional(2D) mapping of elements as an imaging modality	119
9	Validation of LIBS spectra by the physical properties of the plasma	121
9.1	Measurement procedure	122
9.2	Existence of optically thin window	122
9.3	Determination of plasma temperature	124
9.4	Summary of Validation of LIBS spectra by plasma properties . . .	126
10	Summary and outlook	129
11	Zusammenfassung und Ausblick	133
11.1	Thema	133
11.2	Zusammenfassung	133
	Bibliography	137
