**Preface — V**

**A Short Glance on This Volume — VII**

**Abbreviations and Icons — XV**

## **1 Natural Poisons — 1**

- 1.1 Definitions — 1
- 1.2 History of Natural Poisons — 3
- 1.3 Isolation and Characterization of Natural Poisons — 6
  - 1.3.1 Isolation of Natural Poisons — 6
  - 1.3.2 Elucidation of the Chemical Structure of Natural Poisons — 7
  - 1.3.3 Pharmacological Investigations of Natural Poisons — 8
- 1.4 Sources of Natural Poisons — 9
  - 1.4.1 Definitions — 9
  - 1.4.2 Biosynthesis of Natural Poisons — 10
  - 1.4.3 Distribution of Natural Poisons and Conditions for Their Production — 11
  - 1.4.4 Importance of Natural Poisons for Biological Systems — 13
- 1.5 Structure–Activity Relationships of Natural Poisons — 15
- 1.6 Natural Poisons as Sources of Danger for Humans and Animals — 17
- 1.7 Usefulness of Natural Poisons for Humans — 19
- 1.8 Toxicology of Natural Poisons — 20
  - 1.8.1 Toxicity Determination — 20
  - 1.8.2 Toxicokinetics — 21
    - 1.8.2.1 Pathways of Toxin Uptake — 21
    - 1.8.2.2 Resorption — 22
      - 1.8.2.3 Uptake into the Cells — 23
      - 1.8.2.4 Distribution in the Body — 23
      - 1.8.2.5 Biotransformation — 23
      - 1.8.2.6 Elimination — 24
  - 1.8.3 Toxicodynamics — 25
    - 1.8.3.1 General — 25
    - 1.8.3.2 Attack on Receptors — 25
    - 1.8.3.3 Attack on Ion Channels and Other Membrane Components — 26
    - 1.8.3.4 Attack on the Genetic Apparatus — 27
    - 1.8.3.5 Influence on Enzymes — 28
    - 1.8.3.6 Triggering of Allergies — 28

|          |                                                                                                       |           |
|----------|-------------------------------------------------------------------------------------------------------|-----------|
| 1.9      | Clinical Toxicology —                                                                                 | 31        |
| 1.9.1    | General —                                                                                             | 31        |
| 1.9.2    | Measures in Case of Acute Poisoning —                                                                 | 31        |
| 1.9.2.1  | Contacting Poison Information Centers —                                                               | 31        |
| 1.9.2.2  | First Aid (Immediate Actions) —                                                                       | 32        |
| 1.9.2.3  | Clinical Measures —                                                                                   | 33        |
| 1.9.3    | Diagnostics of Poisonings —                                                                           | 35        |
| 1.10     | Precautions to Avoid Poisoning —                                                                      | 37        |
| 1.10.1   | General Precautions —                                                                                 | 37        |
| 1.10.2   | To Prevent Poisonings in Children —                                                                   | 37        |
| 1.10.3   | To Prevent Poisoning in Pets —                                                                        | 38        |
|          | References —                                                                                          | 38        |
| <b>2</b> | <b>Terpenes —</b>                                                                                     | <b>41</b> |
| 2.1      | Chemistry and Terminology —                                                                           | 41        |
| 2.2      | Biogenesis —                                                                                          | 42        |
| 2.3      | Distribution and Significance —                                                                       | 43        |
|          | References —                                                                                          | 43        |
| <b>3</b> | <b>Monoterpenes —</b>                                                                                 | <b>45</b> |
| 3.1      | General —                                                                                             | 45        |
| 3.2      | Monoterpenes as Toxins of Essential Oils —                                                            | 46        |
| 3.2.1    | Thujane Derivatives —                                                                                 | 46        |
| 3.2.1.1  | General —                                                                                             | 46        |
| 3.2.1.2  | Thujone in Arborvitae Species (Thuja Species) and Platycladus Species —                               | 47        |
| 3.2.1.3  | Thujone in Wormwood Species (Artemisia Species) —                                                     | 49        |
| 3.2.1.4  | Thujone in Common Tansy ( <i>Tanacetum vulgare</i> ) —                                                | 51        |
| 3.2.1.5  | Thujone in Sage Species (Salvia Species) —                                                            | 53        |
| 3.2.2    | Sabinene, Sabinol, and Sabinol Esters in Juniper Species (Juniperus Species) —                        | 54        |
| 3.2.3    | 1,8-Cineol in Eucalyptus Species —                                                                    | 57        |
| 3.2.4    | D-Camphor as Possible Toxin in Essential Oils —                                                       | 58        |
| 3.2.5    | Pulegone and Menthofuran as Possible Toxins in Essential Oils —                                       | 59        |
| 3.2.6    | Oxidation Products of Monoterpenes as Allergens —                                                     | 61        |
| 3.3      | Pyrethrins —                                                                                          | 62        |
| 3.4      | Iridoids —                                                                                            | 65        |
| 3.4.1    | General —                                                                                             | 65        |
| 3.4.2    | Valepotriates as Possible Mutagens of Valerian Species (Valeriana Species) and Other Valerianoideae — | 66        |
| 3.5      | Monoterpenes of Seaweeds (Marine Macroalgae) —                                                        | 69        |
|          | References —                                                                                          | 70        |

|          |                                                                                                                                              |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>4</b> | <b>Sesquiterpenes — 74</b>                                                                                                                   |
| 4.1      | General — 74                                                                                                                                 |
| 4.2      | Poisonous Sesquiterpene Lactones — 75                                                                                                        |
| 4.2.1    | Chemistry, Distribution, and Pharmacology — 75                                                                                               |
| 4.2.2    | Sesquiterpene Lactones as Toxins of Arnica Species — 78                                                                                      |
| 4.2.3    | Sesquiterpene Lactones as Toxins of Sneezeweed Species (Helenium Species), Rubberweed Species (Hymenoxys Species), and Geigeria Species — 80 |
| 4.2.4    | Sesquiterpene Lactones as Toxins of Lettuce Species (Lactuca Species) — 83                                                                   |
| 4.2.5    | Sesquiterpene Lactones as Contact Allergens — 84                                                                                             |
| 4.2.6    | Sesquiterpene Lactones with Specific Pharmacological Effects — 93                                                                            |
| 4.3      | Sesquiterpenes as Toxins of Bracken ( <i>Pteridium aquilinum</i> ) — 97                                                                      |
| 4.4      | Aromadendrane Derivatives as Toxins of Labrador Tea (Ledum Species) — 100                                                                    |
| 4.5      | Sesquiterpenes of Seaweeds (Marine Macroalgae) — 102                                                                                         |
|          | References — 104                                                                                                                             |
| <b>5</b> | <b>Diterpenes — 109</b>                                                                                                                      |
| 5.1      | General — 109                                                                                                                                |
| 5.2      | Andromedane Derivatives as Toxins of Heather Family (Ericaceae) — 109                                                                        |
| 5.2.1    | Distribution — 109                                                                                                                           |
| 5.2.2    | Chemistry and Nomenclature — 113                                                                                                             |
| 5.2.3    | Pharmacology and Toxicology — 115                                                                                                            |
| 5.3      | Tiglane, Ingenane, Daphnane Derivatives, and Macrocyclic Diterpenes — 117                                                                    |
| 5.3.1    | Chemistry — 117                                                                                                                              |
| 5.3.2    | Pharmacology and Toxicology — 120                                                                                                            |
| 5.3.3    | Tiglane, Ingenane, Daphnane Derivatives, and Macrocyclic Diterpenes as Toxins of Spurge Family (Euphorbiaceae) — 123                         |
| 5.3.4    | Daphnane and Tiglane Derivatives as Toxins of Daphne Family (Thymelaeaceae) — 132                                                            |
| 5.4      | Taxane Derivatives as Toxins of Yew Species (Taxus Species) — 134                                                                            |
| 5.5      | Diterpenes as Hallucinogenic Compounds of Sage of the Diviners ( <i>Salvia divinorum</i> ) — 138                                             |
| 5.6      | Forskolin as Toxin of Coleus and Plectranthus Species — 141                                                                                  |
| 5.7      | Ryanodine as Toxin of Ryania Species — 142                                                                                                   |
| 5.8      | Diterpenes as Hepatotoxins of Germander Species (Teucrium Species) and Bitter Grape ( <i>Tinospora crispa</i> ) — 142                        |
