

Contents

1	Introduction	1
1.1	Demand for IQ Compression in Telemetry Applications	1
1.2	Summary of Contributions	2
2	Spectrum Compression in Wireless Networks	5
2.1	State-of-the-Art Methods for Spectral Compression	5
2.2	Potential Enhancements in the Context of Telemetry	9
2.3	Proposal for a Sub-band Coding System in Telemetry Networks	13
3	Fundamentals of Spectral Signal Decomposition	15
3.1	Basics of Multi-Rate Theory	15
3.1.1	DFT and $\mathcal{Z}$ -Transform	15
3.1.2	Decimation and Expansion	16
3.1.3	Modulation and Channel Stacking	17
3.2	Introduction to Filter Bank Theory	18
3.2.1	General Filter Bank Structure	19
3.2.2	Error Sources of Filter Banks	20
3.2.3	Specialized Filter Banks	23
3.3	Block Transforms	27
3.3.1	Karhunen-Loève Transform	28
3.3.2	Complex Lapped Transforms	29
3.4	Quantization	33
3.5	Source Coding	35
4	Spectral Segmentation of Telemetry IQ Streams	39
4.1	Prototype Design for Critically Sampled Filter Banks	40
4.2	Prototypes for Perfectly Reconstructing Block Transforms	50
4.3	Design of Arbitrary Non-Critically Sampled Prototypes	56
4.3.1	Evaluation of Standard Prototypes in Spectral Analysis	57
4.3.2	Design of Discrete FIR Filters for Arbitrary Slight Oversampling	61
4.4	Performance Discussion of Prototype Design Routines	68
4.5	Filter Bank Evaluation	70
4.5.1	Coding Gain	73
4.5.2	Basis Restriction Error	76
4.5.3	Aliasing Distortion for Partial Synthesis	79
4.5.4	Measure of Computational Complexity	83
4.5.5	Performance Discussion of Spectral Segmentation Techniques	86

5	Sub-band Signal Detection	89
5.1	Variance Estimator	90
5.2	DFT-based Variance Estimation	96
5.3	Statistical Evaluation by Fitting Tests	101
5.4	Performance Discussion of Detection Methods	106
6	Signal Compression	117
6.1	Prediction for Narrowband IQ Samples	118
6.1.1	Autocorrelation as Metric for Inter-Sample Similarities	120
6.1.2	Filter Design for Linear Prediction of IQ Data	125
6.1.3	Performance Discussion of Linear Prediction on Telemetry Data	129
6.1.4	Specification of Quantization	135
6.1.5	Evaluation of Signal Distortion	145
6.2	Investigation of Residual Distributions	148
6.3	Encoding of the Residual Streams	159
7	Conclusion and Further Research	183
7.1	Conclusion	183
7.2	Further Research	186
A	Appendix	189
A.1	Parameter Setup for QMF Optimization Routines	189
A.2	Parameter Setup for PR Window Design Routines	189
A.3	Residual Compression for Higher Constellation Signals	190
A.4	Compression Performance with In-band Signal Detection	191
A.5	Signal Spectra Employed for the Evaluation	194
A.6	ETSI TS 103 357 Standard	196
	List of Abbreviations	197
	List of Symbols and Operators	201
	Bibliography	205
