

TABLE OF CONTENTS

INTRODUCTION 22

1 LITERATURE REVIEW 25

1.1 Biodiesel: an alternative to fossil fuels..... 25

1.1.1 Overview on biodiesel..... 25

1.1.2 Biodiesel synthesis and possible feedstock 27

1.1.3 Physicochemical properties and oxidation stability 29

1.2 Compression-ignition engines 32

1.2.1 The compression-ignition engine and its composing materials 32

1.2.2 Compatibility of biodiesel with some compression-ignition engine parts 32

1.3 Compatibility of biodiesel with elastomers 33

1.4 Nitrile rubber 38

1.4.1 Main properties..... 38

1.4.2 Curing systems 39

1.4.3 Vulcanisation kinetics 45

1.4.4 Degradation process 47

2 AIMS..... 50

2.1 General aims 50

2.2 Specific aims..... 50

3 MATERIALS AND EQUIPMENT 51

3.1 Part I – Preliminary studies: The influence of acrylonitrile content and different types of crosslink networks..... 51

3.1.1 Materials..... 51

3.1.2 Equipment 51

3.2 Part II – Formulation development: The influence of binary sulphur-based curing systems..... 52

3.2.1 Materials..... 52

3.2.2 Equipment 52

4 METHODS..... 54

4.1 Part I – Preliminary studies: The influence of acrylonitrile content and different types of crosslink networks..... 54

4.1.1 Compounding 54

4.1.2 Vulcanisation..... 55

4.1.3	Vulcanisation kinetic	55
4.1.4	Crosslink density	55
4.1.5	Immersion tests.....	56
4.1.6	Change in mass.....	56
4.1.7	Mechanical tests	57
4.1.7.1	Strain-stress	57
4.1.7.2	Tear strength.....	57
4.1.7.3	Hardness	57
4.1.8	Scanning Electron Microscopy (SEM).....	57
4.2	Part II – Formulation development: The influence of binary sulphur-based curing systems.....	58
4.2.1	Compounding	58
4.2.2	Vulcanisation.....	59
4.2.3	Crosslink density	59
4.2.4	Ageing tests	60
4.2.4.1	Ageing in air.....	60
4.2.4.2	Ageing in biodiesel.....	60
4.2.5	Gravimetric tests.....	60
4.2.6	Stress-strain	61
4.2.7	Hardness	61
4.2.8	Differential scanning calorimetry (DSC)	61
4.2.9	Dynamic mechanical thermal analysis (DMTA).....	61
4.2.10	Scanning electron microscopy (SEM).....	62
4.2.11	Confocal Laser Scanning Microscopy (CLSM).....	62
4.2.12	Attenuated total reflectance Fourier transform infrared (ATR-FTIR) spectroscopy ..	62
4.2.13	Nuclear magnetic resonance (NMR).....	62
4.2.14	Statistical analyses.....	63
4.3	Experimental scheme	64
4.3.1	Part I – Preliminary studies: The influence of acrylonitrile content and different types of crosslink networks.....	64
4.3.2	Part II – Formulation development: The influence of binary sulphur-based curing systems	65
5	RESULTS AND DISCUSSION.....	66

5.1 Part I – Preliminary studies: The influence of acrylonitrile content and different types of crosslink networks.....66

5.1.1 Characterisation of the compositions 66

5.1.1.1 Vulcanisation kinetics 66

5.1.1.2 Crosslink density 68

5.1.2 Ageing tests 69

5.1.2.1 Gravimetric tests..... 69

5.1.2.2 Physical mechanical resistance 71

5.1.2.3 Scanning Electron Microscopy (SEM)..... 75

5.1.3 Overall performance..... 77

5.2 Part II – Formulation development: The influence of binary sulphur-based curing systems.....78

5.2.1 Characterisation of the compositions 78

5.2.1.1 Crosslink density and differential scanning calorimetry (DSC) 78

5.2.1.2 Mechanical properties 80

5.2.1.3 Dynamic mechanical thermal analysis (DMTA)..... 84

5.2.1.4 Scanning electron microscopy (SEM)..... 85

5.2.1.5 Confocal Laser Scanning Microscopy (CLSM)..... 89

5.2.1.6 Attenuated total reflectance Fourier transform infrared (ATR-FTIR) spectroscopy .90

5.2.1.7 Nuclear magnetic resonance (NMR)..... 91

5.2.2 Ageing tests 92

5.2.2.1 Gravimetric tests..... 92

5.2.2.2 Differential scanning calorimetry (DSC) 95

5.2.2.3 Strain-stress 97

5.2.2.4 Hardness 103

5.2.2.5 Confocal Laser Scanning Microscopy (CLSM)..... 104

5.2.2.6 Scanning electron microscopy (SEM)..... 105

CONCLUSIONS.....108

SUGGESTIONS FOR FUTURE WORKS111
