

Contents

1	Introduction and Motivation	1
2	Physical Basics	7
2.1	Terms	7
2.2	Sound Field Quantities, Wave Equation	13
2.2.1	Acoustic Impedance	14
2.2.2	Sound Intensity	16
2.2.3	Sound Power	17
2.2.4	Mechanical Impedance	18
2.2.5	Structure-Borne Sound Power	26
2.2.6	Degree of Radiation	27
2.3	Sound Level	29
2.3.1	Level Addition, Energetic Addition	31
2.3.2	Averaging Level	32
2.3.3	Noise Level	33
2.3.4	A-weighted Level	34
2.3.5	Rating Level	35
2.4	Temporal and Spectral Representation of Sound Field Quantities	38
2.4.1	Periodic Time Course	43
2.4.2	Random, Stochastic Time History, General Noise	44
2.5	Level Reduction by Sound Reflection and Sound Absorption	45
2.5.1	Sound Insulation	45
2.5.2	Sound Attenuation	46
2.5.3	Equivalent Absorption Area A	47
2.6	A-sound Power Level L_{WA}	50
	References	55
3	Sound Generation	57
3.1	Sound Generation Through Flow Processes	60
3.1.1	Sound Generation Due to Velocity Fluctuations	61

3.1.2	Sound Generation Due to Fluctuations in Flow Rate and Alternating Forces	64
3.1.3	Aeropulsive Noise	73
3.1.4	Noise Generation Due to Vortex Formation	74
3.1.5	Noise Generation by Free Jets	75
3.1.6	Noise Generation-due to Intake Noise	81
3.1.7	Noise Generation in Turbulent Boundary Layers	85
3.1.8	Example: Noise Generation of a straight Pipeline	93
3.2	Sound Generation by Mechanical Vibrations, Structure-Borne Sound	100
3.2.1	Excitation of Structure-Borne Sound, Excitation or Alternating Force	106
	References	110
4	Measuring Technology	113
4.1	National and International Standardisation	113
4.1.1	Emission Sound Pressure Level at the Workplace	114
4.1.2	Sound Power Level by Measuring the Sound Pressure Level	115
4.1.3	Sound Power Level by Measuring the Sound Intensity Level	117
4.1.4	Sound Power Level by Measurement of the Structure-Borne Sound Level	117
4.2	Sound and Vibration Measurement Techniques	118
4.2.1	Sound Pressure Measurement	118
4.2.2	Sound Intensity Measurement	122
4.2.3	Structure-Borne Sound Measurement	130
4.3	Direct Determination of the A-total Sound Power Level	139
4.3.1	By Sound Pressure Measurement	140
4.3.2	By Sound Intensity Measurements	141
4.4	Indirect Determination of the A-total Sound Power Level	143
4.4.1	Partial Airborne Sound Power Level	143
4.4.2	Partial Structure-borne Sound Power Level by Sound Intensity Measurements	144
4.4.3	Partial Structure-Borne Sound Power Level by Structure-Borne Sound Measurements	145
	References	148
5	Noise Reduction	149
5.1	Primary Noise Reduction	150
5.1.1	Acoustic Weak Point Analysis	151
5.1.2	Basic Measures for Noise Reduction	159
5.1.3	Principles of Design Acoustics	190
5.2	Secondary Measures	192

5.2.1	Enclosure, Acoustic Enclosure	192
5.2.2	Silencer	198
	References	214
6	Practical Examples	217
6.1	Drive Unit	218
6.1.1	Noise Reduction Planning	220
6.1.2	Acoustic Weak Point Analysis of the Drive Foundation	222
6.1.3	Noise Reduction Measures	226
6.2	Packaging Machine	228
6.2.1	Design Acoustic Weak Point Analysis	229
6.2.2	Noise Reduction Plans	232
6.2.3	Noise Reduction Measures in Principle	234
6.3	Straddle Carrier (Mobile Crane)	235
6.3.1	Acoustic Weak Point Analysis	235
6.3.2	Noise Reduction Plans	243
6.3.3	Noise Reduction Measures	244
6.4	Shell and Tube Heat Exchanger	246
6.4.1	Sound and Vibration Weak Point Analysis	247
6.4.2	Model Tests	251
6.4.3	Constructional Noise Reduction Measures	256
6.5	Acoustic Optimisation of a Vane Gearbox	258
6.5.1	Weak Point Analysis	259
6.5.2	Noise Reduction Measures	261
6.6	Vibration Reduction	264
6.6.1	Cause of Vibration-Induced Damage to the Slideway Supports of a Tablet Press	264
6.6.2	Vibration Reduction in Pipelines	266
6.7	Field-Tested Application Examples	271
6.7.1	Sound Generation	272
6.7.2	Sound and Vibration Transmission	279
6.7.3	Sound Radiation	284
6.7.4	Interaction of Different Mechanisms of Action	287
