Nomenclature	vii
1 Introduction	1
1.1 Motivation	2
1.2 Objectives of the thesis	3
1.3 Structure of the thesis	3
2 Tunable Lenses	5
2.1 Refraction of light	5
2.2 Tunable focus lens	6
2.3 State of the art	7
2.3.1 Flexible membrane-fluid lens	7
2.3.2 Stiff membrane-fluid lens	9
2.3.3 Fluid-fluid lens	10
2.4 Functionality	12
2.4.1 Chromatic aberration correction lenses	12
2.4.2 Monochromatic aberration correction lenses	13
2.4.3 Large aperture and low footprint tunable lenses	13
2.5 Overview of tunable lenses in the thesis	14
3 Components and Processes	17
3.1 Components	17
3.1.1 Actuator	17
3.1.2 Membrane	20
3.1.3 Fluid chamber	21
3.1.4 Substrate	21
3.1.5 Optical fluids	22
3.2 Fabrication	22
3.2.1 Actuator	23
3.2.2 Membrane	25
3.2.3 Fluid chamber	26
3.2.4 Substrate	27
3.2.5 Fluid chamber priming	29
3.3 Simulation	31
3.3.1 General modeling flow	31
3.3.2 Fluid-structure interaction approach	34
3.3.3 Constant fluid volume approach	37

3.4	Surface characterization	39
4	Controllability and Robustness of the Fluid-Membrane Tunable Lenses	41
4.1	Silicone Membrane Lens	43
4.1.1	Working principle	44
4.1.2	Analytical model	45
4.1.3	Fabrication	50
4.2	Glass Membrane Lens	52
4.2.1	Working principle	52
4.2.2	Analytical model	54
4.2.3	Fabrication	58
4.3	Robustness Characterization	60
4.3.1	Closed loop control	60
4.3.2	Temperature	64
4.3.3	Orientation	68
4.3.4	Vibration	73
4.4	Summary	75
5	Chromatic aberration correction lenses	77
5.1	Design and working principle	78
5.1.1	Back-to-back combination	78
5.1.2	Stack combination	80
5.2	Optical fluids	81
5.3	Fabrication	82
5.4	Opto-mechanical characterization	82
5.4.1	Quasi-static response	83
5.4.2	Chromatic aberration	84
5.4.3	Dynamic response	87
5.5	Summary	89
6	Monochromatic aberrations correction lenses	91
6.1	Design and working principle	92
6.2	Fabrication	95
6.3	Opto-mechanical characterization	95
6.3.1	Individual segments	95
6.3.2	Inverse aberration coefficients	96
6.3.3	Maximum aberration range	97
6.4	Summary	100
7	One-Inch Aperture Tunable Lens	101
7.1	Design and working principle	101
7.2	Analytical and simulation model	103
7.2.1	Analytical model	103
7.2.2	Simulation model	104

7.3	Fabrication	106
7.4	Opto-mechanical characterization	107
7.4.1	Quasi-static response	107
7.4.2	Optical aberrations	108
7.4.3	Dynamic response	108
7.5	Summary	110
8	Tunable Prism Lens	111
8.1	Design and working principle	113
8.2	Analytical and simulation model	114
8.2.1	Analytical model	114
8.2.2	Simulation model	117
8.3	Fabrication	117
8.4	Opto-mechanical characterization	119
8.4.1	Quasi-static response	119
8.4.2	Optical aberrations	122
8.4.3	Dynamic response	122
8.5	Summary	122
9	Conclusion and Outlook	125
A	Appendix	129
A.1	Pressure and temperature sensor	130
A.2	External PCB fabrication	131
A.3	Sensor Amplifier	132
	Publications	133
	Bibliography	137
