

Contents

1 Elastic Scattering: Stationary Formulation—Differential Equations	1
1.1 Some Basic Concepts	1
1.1.1 Elastic Scattering Experiments	1
1.1.2 Formulation of the Two-Particle Scattering Problem	3
1.1.3 Connection Between Theory and Experiment	7
1.1.4 The Differential Cross Section in the Laboratory System and in the Centre of Mass System	8
1.2 The Partial Wave Expansion	10
1.2.1 Partial Wave Expansion in the Case of Cylindrical Symmetry	12
1.2.2 The Phase Shift	15
1.2.3 An Example: Scattering by a Spherical Potential Well	17
1.3 Scattering by a Coulomb Potential	26
1.3.1 Partial Wave Expansion	27
1.3.2 Solution in Parabolic Coordinates	30
1.4 Potential Scattering of Particles with Spin	33
1.4.1 Differential Cross Sections	35
1.4.2 Selection Rules	36
1.4.3 Role of Particle Statistics	37
1.5 Detailed Calculations for Chap. 1	40
1.5.1 The Differential Cross Section	40
1.5.2 The Optical Theorem	41
1.5.3 Centre of Mass and Laboratory Systems	42
1.5.4 Various Bessel Functions	46
1.5.5 Partial Waves	48
1.5.6 The Confluent Hypergeometric Function	50
1.5.7 Properties of the Coulomb Wave Function	51
1.5.8 The Coulomb Problem in Parabolic Coordinates: Asymptotic Limit	53
Literature Quoted in the Preliminary Remarks and in Chap. 1	54

2 Elastic Scattering: Stationary Formulation—Integral Equations	55
2.1 The Lippmann-Schwinger Equation for the Scattering Wave Function	56
2.1.1 Green's Functions	57
2.2 The Lippmann-Schwinger Equation for the T-Matrix	64
2.2.1 Methods for the Approximate Calculation of T-Matrix Elements	67
2.2.2 Approximation Methods in Terms of Feynman Diagrams	70
2.3 The T-Matrix and the Optical Theorem	73
2.4 Detailed Calculations for Chap. 2	75
2.4.1 Calculation of the Regularised Green's Function	75
2.4.2 The Dirac Identity	76
Literature in Chap. 2	80
3 Elastic Scattering: Time-Dependent Formulation	81
3.1 The Time Development Operator	82
3.1.1 The Schrödinger Picture	83
3.1.2 The Interaction Picture	86
3.1.3 The Time Development of the Collision Process	88
3.1.4 The Møller Operators	90
3.2 The S-Matrix	91
3.2.1 Adiabatic Switching, Formal Considerations	92
3.2.2 The Relation Between the S- and the T-Matrix	95
3.3 Statements About the S-Matrix and the Møller Operators	95
3.3.1 Additional Properties of the Møller Operators	96
3.3.2 Properties of the S-Matrix	98
3.4 The K-Matrix	99
3.5 Partial Wave Expansions for the T-, S- and K-Matrices	102
3.5.1 Central Potentials	102
3.5.2 General Local Potentials: Selection Rules for the Partial Scattering Amplitudes	107
3.6 Detailed Calculations for Chap. 3	110
3.6.1 Existence of Asymptotic Time Limits	110
3.6.2 Proof with a Wave Packet	110
3.6.3 Proof by Regularisation	112
3.6.4 Perturbation Expansion of the S-Matrix: First and Second Order Contribution	113
3.6.5 Relation Between the S- and the T-Matrix, General Argument	117
3.6.6 Orthogonality of Scattering States	118
3.6.7 Unitarity Relation for the Partial S-Matrix Elements	119
Literature in Chap. 3	120

4 Conservation Laws in Scattering Theory	121
4.1 The Classification of Operators	123
4.2 Elastic Scattering: Spinless Particles	125
4.2.1 Translation: Conservation of Momentum	125
4.2.2 Rotation: Conservation of Angular Momentum	127
4.2.3 Mirror Symmetry: Parity	129
4.2.4 Time Reversal	130
4.3 Elastic Scattering: Particles with Spin	132
4.4 Detailed Calculations for Chap. 4	134
4.4.1 Translation	134
Literature in Chap. 4	136
5 Elastic Scattering: The Analytical Structure of the S-Matrix	137
5.1 The Regular Solutions of the Potential Scattering Problem	138
5.2 The Jost Solutions and the Jost Functions	140
5.2.1 Jost Solutions	140
5.2.2 Jost Functions	142
5.3 The Partial S-Matrix Elements	144
5.3.1 Scattering States and Bound States	145
5.3.2 Resonance and Virtual States	148
5.3.3 Levinson's Theorem	152
5.4 Illustration of the Theorem: The Spherical Potential Well	154
5.4.1 The Potential Well	155
5.4.2 The Potential Barrier	158
5.5 Detailed Calculations for Chap. 5	158
5.5.1 Complex Conjugation of the Jost Functions	158
5.5.2 The Jost Solution $f_0^{(-)}(k, r)$ and the Jost Function $F_0^{(-)}(k)$ for the Exponential Potential	159
5.5.3 Distribution of the Zeros of the Jost Function $F_l^{(-)}(k)$	161
5.5.4 Material for the Proof of Levinson's Theorem	163
5.5.5 The Complex Equation $K \cot KR = ik$	164
Literature in Chap. 5	165
6 Elastic Scattering with Spin-Polarised Particles	167
6.1 The Statistical Density Operator and the Density Matrix	169
6.1.1 Elastic Scattering of Two Particles	170
6.1.2 Spin-1/2 Particles are Scattered by Spin-0 Particles	172
6.1.3 Spin-1/2 Particles are Scattered by Spin-1/2 Particles	179
7 Remarks on Multichannel Problems	183
7.1 Channels and Channel Møller Operators	184
7.2 The Multichannel S-Matrix	187
7.3 The Multichannel Lippmann-Schwinger Equation	188
7.4 The Multichannel T-Matrix	190
7.5 The Faddeev Equations	196

7.6	Transfer Reactions	204
7.6.1	A Short Note on Nuclear Reactions	204
7.6.2	The Born Approximation	206
7.6.3	Optical Potentials	208
7.6.4	DWBA: Born Approximation with Distorted Waves	211
7.7	Detailed Calculations for Chap. 7	212
7.7.1	Energy Conservation of the S-Matrix	212
7.7.2	Steps for an Alternative Derivation of the Faddeev-Lovelace Equations	213
7.7.3	Lippmann's Identity	214
	Literature in Chap. 7	215
	Literature	217
	Index	221
