1	New Treatise in Fractional Dynamics	
	<i>Dumitru Baleanu</i>	1
1.1	Introduction	1
1.2	Basic definitions and properties of fractional derivatives and integrals	3
1.3	Fractional variational principles and their applications	10
1.3.1	Fractional Euler-Lagrange equations for discrete systems ...	11
1.3.2	Fractional Hamiltonian formulation	13
1.3.3	Lagrangian formulation of field systems with fractional derivatives	20
1.4	Fractional optimal control formulation	23
1.4.1	Example	24
1.5	Fractional calculus in nuclear magnetic resonance	27
1.6	Fractional wavelet method and its applications in drug analysis	32
	References	35
2	Realization of Fractional-Order Controllers: Analysis, Synthesis and Application to the Velocity Control of a Servo System	
	<i>Ramiro S. Barbosa, Isabel S. Jesus, Manuel F. Silva, J.A. Tenreiro Machado</i>	43
2.1	Introduction	43
2.2	Fractional-order control systems	45
2.2.1	Basic theory	45
2.2.2	Fractional-Order controllers and their implementation	47
2.3	Oustaloup's frequency approximation method	49
2.4	The experimental modular servo system	50
2.5	Mathematical modelling and identification of the servo system	50
2.6	Fractional-order real-time control system	53
2.7	Ziegler-Nichols tuning rules	54

2.7.1	Ziegler-Nichols tuning rules: quarter decay ratio	55
2.7.2	Ziegler-Nichols tuning rules: oscillatory behavior	59
2.7.3	Comments on the results	61
2.8	A simple analytical method for tuning fractional-order controllers	63
2.8.1	The proposed analytical tuning method	65
2.9	Application of optimal fractional-order controllers	69
2.9.1	Tuning of the PID and $PI^\lambda D$ controllers	70
2.10	Conclusions	77
	References	78

3 Differential-Delay Equations

Differential Delay Equations		83
<i>Richard Rand</i>		
3.1	Introduction	83
3.2	Stability of equilibrium	84
3.3	Lindstedt's method	85
3.4	Hopf bifurcation formula	88
3.4.1	Example 1	90
3.4.2	Derivation	91
3.4.3	Example 2	92
3.4.4	Discussion	93
3.5	Transient behavior	94
3.5.1	Example	94
3.5.2	Exact solution	95
3.5.3	Two variable expansion method (also known as multiple scales)	95
3.5.4	Approach to limit cycle	97
3.6	Center manifold analysis	97
3.6.1	Appendix: The adjoint operator A^*	107
3.7	Application to gene expression	108
3.7.1	Stability of equilibrium	109
3.7.2	Lindstedt's method	111
3.7.3	Numerical example	113
3.8	Exercises	114
References		115

4 Analysis and Control of Deterministic and Stochastic Dynamical Systems with Time Delay

<i>Jian-Qiao Sun, Bo Song</i>	119
4.1 Introduction	119
4.1.1 Deterministic systems	120
4.1.2 Stochastic systems	122
4.1.3 Methods of solution	122
4.1.4 Outline of the chapter	124

4.2	Abstract Cauchy problem for DDE.....	124
4.2.1	Convergence with Chebyshev nodes.....	126
4.3	Method of semi-discretization.....	127
4.3.1	General time-varying systems.....	129
4.3.2	Feedback controls.....	130
4.3.3	Analysis of the method of semi-discretization.....	133
4.3.4	High order control.....	138
4.3.5	Optimal estimation.....	139
4.3.6	Comparison of semi-discretization and higher order control.....	140
4.4	Method of continuous time approximation.....	143
4.4.1	Control problem formulations.....	144
4.5	Spectral properties of the CTA method.....	146
4.5.1	A low-pass filter based CTA method.....	149
4.5.2	Example of a first order linear system.....	150
4.6	Stability studies of time delay systems.....	153
4.6.1	Stability with Lyapunov-Krasovskii functional.....	153
4.6.2	Stability with Padé approximation.....	155
4.6.3	Stability with semi-discretization.....	156
4.6.4	Stability of a second order LTI system.....	156
4.7	Control of LTI systems.....	163
4.8	Control of the Mathieu system.....	167
4.9	An experimental validation.....	172
4.10	Supervisory control.....	174
4.10.1	Supervisory Control of the LTI System.....	175
4.10.2	Supervisory control of the periodic system.....	178
4.11	Method of semi-discretization for stochastic systems.....	181
4.11.1	Mathematical background.....	181
4.11.2	Stability analysis.....	183
4.12	Method of finite-dimensional markov process (FDMP).....	184
4.12.1	Fokker-Planck-kolmogorov (FPK) equation.....	185
4.12.2	Moment equations.....	186
4.12.3	Reliability.....	187
4.12.4	First-passage time probability.....	188
4.12.5	Pontryagin-Vitt equations.....	189
4.13	Analysis of stochastic systems with time delay.....	190
4.13.1	Stability of second order stochastic systems.....	190
4.13.2	One Dimensional Nonlinear System.....	196
	References.....	198

5 Synchronization of Dynamical Systems in Sense of Metric Functionals of Specific Constraints

<i>Albert C.J. Luo</i>	205
5.1 Introduction.....	205

5.2	System synchronization	208
5.2.1	Synchronization of slave and master systems	208
5.2.2	Generalized synchronization	214
5.2.3	Resultant dynamical systems	216
5.2.4	Metric functionals	220
5.3	Single-constraint synchronization	223
5.3.1	Synchronicity	223
5.3.2	Singularity to constraint	227
5.3.3	Synchronicity with singularity	231
5.3.4	Higher-order singularity	232
5.3.5	Synchronization to constraint	236
5.3.6	Desynchronization to constraint	252
5.3.7	Penetration to constraint	257
5.4	Multiple-constraint synchronization	261
5.4.1	Synchronicity to multiple-constraints	261
5.4.2	Singularity to constraints	264
5.4.3	Synchronicity with singularity to multiple constraints	267
5.4.4	Higher-order singularity to constraints	270
5.4.5	Synchronization to all constraints	274
5.4.6	Desynchronization to all constraints	279
5.4.7	Penetration to all constraints	284
5.4.8	Synchronization-desynchronization-penetration	287
5.5	Conclusions	294
	References	294

6 The Complexity in Activity of Biological Neurons

	<i>Yong Xie, Jian-Xue Xu</i>	299
6.1	Complicated firing patterns in biological neurons	300
6.1.1	Time series of membrane potential	300
6.1.2	Firing patterns: spiking and bursting	300
6.2	Mathematical models	306
6.2.1	HH model	306
6.2.2	FitzHugh-Nagumo model	307
6.2.3	Hindmarsh-Rose model	308
6.3	Nonlinear mechanisms of firing patterns	309
6.3.1	Dynamical mechanisms underlying Type I excitability and Type II excitability	309
6.3.2	Dynamical mechanism for the onset of firing in the HH model	310
6.3.3	Type I excitability and Type II excitability displayed in the Morris-Lecar model	311
6.3.4	Change in types of neuronal excitability via bifurcation control	314
6.3.5	Bursting and its topological classification	322

6.3.6	Bifurcation, chaos and Crisis	324
6.4	Sensitive responsiveness of aperiodic firing neurons to external stimuli	326
6.4.1	Experimental phenomena	326
6.4.2	Nonlinear mechanisms	328
6.5	Synchronization between neurons	334
6.5.1	Significance of synchronization in the nervous system	334
6.5.2	Coupling: electrical coupling and chemical coupling	335
6.6	Role of noise in the nervous system	337
6.6.1	Constructive role: stochastic resonance and coherence resonance	337
6.6.2	Stochastic resonance: When does it not occur in neuronal models?	338
6.6.3	Global dynamics and stochastic resonance of the forced FitzHugh-Nagumo neuron model	339
6.6.4	A novel dynamical mechanism of neural excitability for integer multiple spiking	342
6.6.5	A Further Insight into Stochastic Resonance in an Integrate-and-fire Neuron with Noisy Periodic Input	345
6.6.6	Signal-to-noise ratio gain of a noisy neuron that transmits subthreshold periodic spike trains	352
6.6.7	Mechanism of bifurcation-dependent coherence resonance of Morris-Lecar Model	352
6.7	Analysis of time series of interspike intervals	353
6.7.1	Return map	353
6.7.2	Phase space reconstruction	353
6.7.3	Extraction of unstable periodic orbits	355
6.7.4	Nonlinear prediction and surrogate data methods	356
6.7.5	Nonlinear characteristic numbers	358
6.8	Application	362
6.9	Conclusions	363
	References	363
