About the Authors *vii*

Preface *ix*

Acknowledgments *xiii*

1	A Brief History of Artificial Light and LED Packaging	1
1.1	Evolution in Artificial Light	1
1.2	Impact of Light-Emitting Diode on the World	4
1.3	LED Industrial Chain	6
1.4	Evolution in LED Packaging Technology	8
1.4.1	Low-Power Package Evolution	12
1.4.2	Mid-Power LED Packages	14
1.4.3	LED High-Power and Ultra-High-Power Packages	15
1.5	Summary	17
	References	18
2	Fundamentals of LED Packaging Technology	19
2.1	Effective Light Extraction	19
2.1.1	Theory of Light Conversion in LED	21
2.1.2	Light Extraction Based on Chip Technology	23
2.1.2.1	Chip Surface Roughing	25
2.1.2.2	Buried Micro-Reflectors Chip	26
2.1.2.3	Chip Geometrical Shaping and Type	26
2.1.3	Light Extraction Based on High Reflective Packaging Material	28
2.1.3.1	Leadframe Plating Surface Influence	28
2.1.3.2	Housing Material Reflectivity	29
2.1.3.3	Encapsulation Material Light Extraction Efficacy	29
2.1.4	Optical Interface Enhancing Light Extraction	31
2.2	Package Design and Encapsulation Technology	32
2.2.1	Package Design	32
2.2.1.1	Design for Cost	33

2.2.1.2	Design for Reliability	34
2.2.1.3	Design for Manufacturing	34
2.2.1.4	Design for Testing	34
2.2.1.5	Design for Environment	36
2.2.1.6	Design for Assembly at Second Level PCB Board	36
2.2.1.7	Design for Effective Light Extraction	37
2.2.2	Encapsulation of LED	37
2.2.2.1	Epoxy, Silicone, and Hybrid Compound Encapsulation	37
2.2.2.2	Hermetic Sealed Package – Metal Can	40
2.2.2.3	Epoxy Cap Encapsulation	41
2.2.2.4	Glass Cap on Ceramic or Aluminum Encapsulation	41
2.3	LED Thermal Management	42
2.3.1	Fundamental of the LED Thermal Behaviors	42
2.3.2	Thermal Design in LED Package	46
2.3.3	Impact of Thermal Behavior of an LED on Its Performance	48
2.4	Electrical Contact Design	49
2.5	LED Light Conversion Principle	50
2.6	Summary	50
	References	51
3	LED Packaging Manufacturing Technology	53
3.1	LED Packaging Process Flow	53
3.1.1	Die-Attach Process	53
3.1.1.1	Die-Attach and Glue Curing Process	55
3.1.2	Wire Bonding Process	56
3.1.3	Surveillance Checking Using Statistical Process Control	58
3.1.4	Encapsulation Process and Post-Mold Curing Process	60
3.1.5	Singulation Process	62
3.1.6	Final Test and Auto Vision System Process	62
3.1.7	Packing Process	63
3.2	Common Defects in LED Packaging Industry	65
3.2.1	Die-crack: Impact on the Electrical and Optical Properties of LED	65
3.2.2	Lifted Die or Glue: Impact on LED Thermal Behavior and LED Performance	67
3.2.3	Wire Interconnect Defects: Impact on LED Electro-optical Quality	69
3.3	Summary	70
	References	70
4	LED Automotive Lighting Application Technology	71
4.1	Basic Science of Light for Automotive – The Photometric	72
4.1.1	Light Intensity	72
4.1.2	Luminous Flux	73
4.1.3	Illuminance	74
4.1.4	Luminance	74
4.1.5	Luminous Efficacy	74

4.2	Lighting – Light Projection “To See”	74
4.2.1	Headlamp	75
4.2.2	Adaptive Front-Lighting System – Headlamp	77
4.2.3	Optical Concept Automotive Front Lighting – Headlamp	80
4.2.4	Future of LED Headlamp Technology	81
4.2.5	LED Headlamp Thermal Management	82
4.3	Signaling – Lights That Are “To Be Seen”	83
4.3.1	AFL – Day Running Light	84
4.3.2	ARL – Signaling Lights	85
4.3.3	Optic Concepts of Signaling Light “To Be Seen”	86
4.3.3.1	Reflective and Refractive Optics	86
4.3.3.2	Light Guide Optics	87
4.4	Interior Lighting	92
4.5	Summary	93
	References	93
5	LED Application For Consumer Industry	95
5.1	Consumer Indoor Lighting	95
5.2	Health Care and Medical Treatments	96
5.3	Safety and Security	98
5.3.1	Led in Iris Recognition System	98
5.3.2	LED in Food Processing	100
5.3.3	Treatment in Solid and Liquid Foods	101
5.3.4	Water Treatment	102
	References	102
6	LED Application for General Lighting	105
6.1	RETROFIT Lighting	105
6.1.1	RETROFIT Lamp	107
6.1.2	Hospitality Lighting – Architecture Lighting	111
6.2	LEDfit Lighting	112
6.2.1	Residential Lighting – Living Room Down Lighting	112
6.2.2	LED Street Lighting	113
6.2.3	Exterior Architectural Lighting	117
6.2.4	Horticulture Lighting Application	118
6.2.4.1	Photosynthesis	119
6.2.5	Photomorphogenesis	120
6.2.5.1	Impact of LED Light on Horticulture Industry	121
6.3	Summary	122
	References	123
7	Quantum LEDs	125
7.1	Quantum LED as the Alternative to Organic LED	125
7.2	Fundamentals of Quantum Dot	125
7.3	Quantum Dots in LED	129

7.4	Quantum LED Structures	130
7.5	QD-LED Fabrication	132
	References	134
8	Ultraviolet LED Packaging and Application	137
8.1	UV LED Application	137
8.2	UV-A and B LED Packaging Technology	140
8.3	UV-C Packaging Technology	142
8.4	Future Application of UV-LED and Packaging Design Evolution	143
8.4.1	Novel Liquid Packaging Structure	143
8.5	Impact of UV-LED to UV Light Source Business	144
8.6	Summary	144
	References	145
9	Lifecycle Analysis and Circular Economy of LEDs	147
9.1	Introduction	147
9.2	LCA of LEDs	148
9.2.1	Materials Footprint	149
9.2.2	Embodied Energy and Carbon Footprint	151
9.3	Circular Economy of LEDs	152
9.3.1	Lower Material Quantities by Design and Enhanced Material Properties	153
9.3.2	Materials with Multifunctionalities	154
9.3.3	Materials of Higher Circularity	155
9.3.4	Materials with Enhanced Durability	156
9.3.5	Materials with Reduced Carbon Footprint and Embodied Energy	156
9.3.6	Material Miles	157
9.3.7	Sustainable Materials from Renewable, Recycled, and Recovered Sources	157
9.3.8	Materials with Higher Environmental Benignity	157
9.3.9	Materials with No Adverse Human Health Effects	157
9.3.10	Materials Enabling Healthy Natural Habitat	158
	References	158
	Index	159
