Summary	3
Zusammenfassung	5
I General Introduction.....	9
I.1 Pollination as an ecosystem service.....	9
I.2 Bee population declines	9
I.3 Pesticides	10
I.4 Nutrition.....	13
I.5 Interacting stressors	15
I.6 Aims and motivations	16
II Nutritional resources modulate the responses of three bee species to pesticide exposure	19
III Polyfloral nutritional resources promote bumble bee colony development after exposure to a pesticide mixture	51
IV High nutritional status promotes vitality of honey bees and mitigates negative effects of pesticides	75
V General Discussion	97
V.1 Resources promote mitigation effects on honey bees	99
V.2 Resources promote mitigation effects on bumble bees	101
V.3 Resources promote mitigation effects on solitary bees	103
V.4 Outlook and further research.....	104
V.5 Conclusion.....	105
References.....	107
Eidesstattliche Erklärung	129
Acknowledgements.....	130
