1 Introduction — 1

- 1.1 Basic definitions — 2
 - 1.1.1 Linear maximally subelliptic operators — 5
 - 1.1.2 Nonlinear maximally subelliptic operators — 9
- 1.2 Background: elliptic theory — 12
- 1.3 Carnot–Carathéodory geometry — 14
- 1.4 Singular integrals — 15
- 1.5 Function spaces — 17
- 1.6 Linear theory — 18
- 1.7 Fully nonlinear theory — 20
 - 1.7.1 The inverse function theorem — 21
- 1.8 Multi-parameter theory — 24
- 1.9 The main tool: scaling — 27
 - 1.9.1 Scaling for elliptic operators — 28
 - 1.9.2 Scaling for maximally subelliptic operators — 28
- 1.10 Outline — 29

2 Ellipticity — 31

- 2.1 Some basic function spaces — 32
- 2.2 Pseudo-differential operators and the Fourier transform — 35
 - 2.2.1 Pseudo-differential operators without the Fourier transform — 37
 - 2.2.2 Elliptic operators and pseudo-differential operators — 42
- 2.3 Singular integral operators — 47
 - 2.3.1 Local, matrix-valued operators — 58
- 2.4 Besov and Triebel–Lizorkin spaces — 59
- 2.5 Zygmund–Hölder spaces — 70
 - 2.5.1 Decomposition into smooth functions — 76
- 2.6 Compositions and product Zygmund–Hölder spaces — 78
- 2.7 Linear elliptic operators — 87
- 2.8 Nonlinear elliptic equations — 90
 - 2.8.1 Reduction I — 93
 - 2.8.2 Reduction II — 96
 - 2.8.3 Completion of the proof — 98
 - 2.8.4 Weighted estimates near the boundary — 106
- 2.9 Further reading and references — 111

3 Vector fields and Carnot–Carathéodory geometry — 114

- 3.1 Manifolds — 114
 - 3.1.1 The exponential map — 116
 - 3.1.2 The Baker–Campbell–Hausdorff formula — 118

3.1.3	The Frobenius theorem —	119
3.2	The unit scale —	121
3.3	Scaling and Hörmander vector fields —	123
3.3.1	Scaling and maximal subellipticity —	127
3.4	Finitely generated setting —	129
3.5	Multi-parameter Carnot–Carathéodory geometry —	135
3.5.1	An important special case: Hörmander’s condition —	137
3.5.2	Dropping parameters —	138
3.6	The quantitative coordinate system —	139
3.7	Proofs of scaling results —	142
3.8	Approximately commuting vector fields —	148
3.9	Integrating over leaves —	155
3.10	Integrals and approximately commuting vector fields —	158
3.11	Maximal functions —	166
3.11.1	The finitely generated setting —	167
3.11.1.1	A result on the unit ball —	170
3.11.1.2	Proof of Theorem 3.11.2 —	172
3.11.2	The Hörmander setting —	174
3.12	Approximately commuting partial differential operators —	177
3.13	Filtered modules of vector fields —	186
3.14	Control of vector fields —	188
3.14.1	Further comments on equivalence —	190
3.15	The main multi-parameter setting —	194
3.15.1	The multi-parameter unit scale —	194
3.15.2	Scaling —	195
3.15.3	Quantitative scaling —	198
3.16	Further reading and references —	203
4	Pseudo-differential operators —	205
4.1	Symbols of pseudo-differential operators —	206
4.1.1	Connection with standard pseudo-differential operators —	208
4.1.2	Littlewood–Paley decomposition of symbols —	209
4.2	The exponential map —	215
4.3	Littlewood–Paley decompositions —	223
4.3.1	Lebesgue space bounds —	231
4.3.2	Adjoint —	234
4.3.3	Proof of the Littlewood–Paley decomposition —	236
4.4	Adding parameters —	238
4.5	The sub-Laplacian —	239
4.5.1	The sub-Laplacian is subelliptic —	240
4.5.2	Homogeneity —	250
4.5.3	Nilpotent Lie groups —	254

- 4.5.4 Free nilpotent Lie algebras — 256
- 4.5.5 The calculus — 257
- 4.5.6 The parametrix — 262
- 4.5.7 Limitations of the lifting procedure — 264
- 4.6 Further reading and references — 265

5 Singular integrals — 267

- 5.1 The three settings — 267
 - 5.1.1 The single-parameter setting — 267
 - 5.1.2 The multi-parameter Hörmander setting — 268
 - 5.1.3 The general multi-parameter setting — 269
- 5.2 The algebras of singular integrals — 270
 - 5.2.1 The single-parameter setting — 271
 - 5.2.2 The multi-parameter Hörmander setting — 274
 - 5.2.3 The general multi-parameter setting — 276
- 5.3 Notation — 279
- 5.4 Pre-elementary operators — 280
- 5.5 Elementary operators — 289
- 5.6 Pseudo-differential operators — 310
- 5.7 Equivalence of the definitions — 316
- 5.8 Basic properties — 329
 - 5.8.1 Pseudo-locality — 334
 - 5.8.2 Standard pseudo-differential operators — 338
- 5.9 An important subalgebra — 340
 - 5.9.1 Standard pseudo-differential operators — 353
- 5.10 L^p bounds in the single-parameter case — 355
 - 5.10.1 A uniform result — 358
 - 5.10.2 Beyond Hörmander's condition — 359
- 5.11 Parametrices — 369
 - 5.11.1 Parametrices via heat equations — 370
 - 5.11.2 Parametrices and other geometries — 378
- 5.12 Spectral multipliers — 387
- 5.13 Further reading and references — 389

6 Besov and Triebel–Lizorkin spaces — 393

- 6.1 Informal description of the norms — 394
- 6.2 The single-parameter spaces — 396
- 6.3 The multi-parameter spaces — 400
- 6.4 The main estimate — 402
- 6.5 Some basic properties — 408
 - 6.5.1 Smooth functions are dense — 422
- 6.6 The single-parameter spaces, revisited — 425

6.6.1	The classical spaces —	427
6.6.2	Comparing single-parameter spaces —	431
6.6.3	Boundedness of operators in $\mathcal{D}$ —	439
6.7	Trading derivatives —	445
6.7.1	Sharpness —	448
6.8	Adding parameters —	458
6.9	Sobolev spaces —	470
6.10	Distributions of finite norm —	472
6.11	An explicit choice of norm —	475
6.11.1	The unit scale —	479
6.11.2	Scaling —	479
6.12	A spectral definition —	481
6.13	Further questions —	482
6.14	Further reading and references —	483
7	Zygmund–Hölder spaces —	486
7.1	The norm —	487
7.2	Decomposition into smooth functions —	490
7.3	Bounds of some sums —	492
7.4	Algebra —	494
7.5	Compositions —	496
7.5.1	Properties of the product Zygmund–Hölder spaces —	499
7.5.2	Proof of the composition theorem —	501
7.5.3	The classical product Zygmund–Hölder spaces —	513
7.6	Adding parameters —	514
7.7	Difference characterization —	515
7.7.1	Hölder spaces —	530
8	Linear maximally subelliptic operators —	534
8.1	The main result —	534
8.2	Further regularity properties —	537
8.2.1	Single-parameter function spaces —	537
8.2.2	Standard function spaces —	541
8.2.3	Multi-parameter function spaces —	546
8.3	A priori estimates —	551
8.3.1	Some preliminary estimates —	552
8.3.2	Subelliptic estimates —	554
8.3.3	Exponential estimates —	566
8.4	Heat equations —	579
8.4.1	Step I: the unit scale —	581
8.4.1.1	On diagonal bounds —	581
8.4.1.2	Off-diagonal bounds —	582

- 8.4.2 Step II: a single point and scale — **583**
 - 8.4.2.1 On-diagonal bounds — **585**
 - 8.4.2.2 Off-diagonal bounds — **587**
- 8.4.3 Step III: all scales — **588**
- 8.5 Proof of the main result — **598**
- 8.6 Vector bundles — **604**
- 8.7 Quantitative regularity estimates — **608**
 - 8.7.1 The unit scale — **608**
 - 8.7.2 A small scale — **610**
- 8.8 Representation theory and Rockland's condition — **613**
- 8.9 Positive definite forms — **614**
- 8.10 Further reading and references — **616**

9 Nonlinear maximally subelliptic equations — 619

- 9.1 Main qualitative results — **619**
 - 9.1.1 Single-parameter results — **620**
 - 9.1.1.1 Qualitative Schauder estimates — **622**
 - 9.1.2 Multi-parameter results — **624**
 - 9.1.2.1 Qualitative Schauder estimates — **627**
- 9.2 Main quantitative result — **627**
 - 9.2.1 Vector fields and norms — **630**
 - 9.2.2 Bump functions — **632**
 - 9.2.3 Scaled estimates — **640**
 - 9.2.4 Step I: Perturbation of a linear operator — **646**
 - 9.2.5 Step II: A simpler form — **656**
 - 9.2.6 Scaled decompositions of Zygmund–Hölder functions — **660**
 - 9.2.7 Step III: Completion of the proof — **662**
- 9.3 Weighted estimates near the boundary — **675**
 - 9.3.1 Weighted Schauder estimates near the boundary — **684**
- 9.4 Examples — **685**
 - 9.4.1 Second-order equations — **685**
 - 9.4.2 The Monge–Ampère equation — **687**
 - 9.4.3 Higher-order Monge–Ampère equations — **689**
 - 9.4.4 Higher-order equations — **691**
- 9.5 Further reading and references — **693**

A Canonical coordinates — 695

- A.1 Basic notation — **695**
- A.2 The main results — **696**
 - A.2.1 More on the assumptions — **698**
 - A.2.2 Densities — **701**
- A.3 Qualitative consequences — **703**

X — Contents

A.4	Proofs —	707
A.4.1	An ODE —	707
A.4.1.1	Derivation of the ODE —	707
A.4.1.2	Existence, uniqueness, and regularity —	710
A.4.2	An inverse function theorem —	716
A.4.3	Proof of the main result —	719
A.4.3.1	Linearly independent —	719
A.4.3.2	Linearly dependent —	724
A.4.4	Densities —	732
A.4.5	Proof of Theorem 3.6.5 —	738
A.5	Further reading and references —	738
