Part I Fundamentals

1	Basics of Elasticity Theory	3
1.1	Introduction	3
1.2	Stress State	4
1.2.1	Stress Vector and Stress Tensor	4
1.2.2	Transformation Rules	8
1.2.3	Principal Stresses, Invariants, Mohr's Circles	10
1.2.4	Equilibrium Conditions	12
1.3	Deformations and Strains	14
1.3.1	Introduction	14
1.3.2	Green-Lagrangian Strain Tensor	17
1.3.3	Von-Kármán Strains	18
1.3.4	Infinitesimal Strain Tensor	19
1.3.5	Compatibility Equations	21
1.4	Constitutive Law	22
1.4.1	Introduction	22
1.4.2	The Generalized Hooke's Law	22
1.4.3	Strain Energy	25
1.5	Boundary Value Problems	27
1.6	Material Symmetries	29
1.6.1	Full Anisotropy	29
1.6.2	Monotropic Material	30
1.6.3	Orthogonal Anisotropy/Orthotropy	32
1.6.4	Transversal Isotropy	34
1.6.5	Isotropy	35
1.6.6	Representation in Engineering Constants	35
1.7	Transformation Rules	38
1.8	Representation of the Basic Equations in Cylindrical Coordinates	40
1.9	Plane Problems	44
1.9.1	Plane Strain State	44

1.9.2	Plane Stress State	46
1.9.3	Stress Transformation	48
1.9.4	Formulation for Orthotropic Materials	51
1.9.5	Formulation in Polar Coordinates	55
	References	57
2	Energy Methods of Elastostatics	59
2.1	Work and Energy	59
2.1.1	Introduction	59
2.1.2	Inner and Outer Work	61
2.1.3	Principle of Work and Energy and the Law of Conservation of Energy	62
2.1.4	Strain Energy and Complementary Strain Energy	63
2.1.5	General Principle of Work and Energy of Elastostatics	72
2.2	The Principle of Virtual Displacements	74
2.2.1	Virtual Displacements and Virtual Work	74
2.2.2	The Principle of Virtual Displacements	77
2.2.3	Analysis Rules for the Variational Operator δ	77
2.2.4	Formulation for the Continuum	79
2.2.5	Application to the Rod	80
2.2.6	Application to the Euler-Bernoulli Beam	82
2.3	Principle of the Stationary Value of the Total Elastic Potential	83
2.3.1	Introduction	83
2.3.2	Application to the Rod	84
2.3.3	Application to the Euler-Bernoulli Beam	87
2.4	Approximation Methods of Elastostatics	89
2.4.1	The Ritz Method	90
2.4.2	The Galerkin Method	93
	References	95

Part II Disks

3	Isotropic Disks in Cartesian Coordinates	99
3.1	Introduction	99
3.2	Fundamentals	101
3.2.1	Basic Equations	101
3.2.2	The Displacement Method	103
3.2.3	The Force Method	104
3.2.4	Boundary Conditions	108
3.3	Energetic Consideration	109
3.3.1	Strain Energy	109
3.3.2	Energetic Derivation of the Basic Equations	110

3.3.3	Disks with Arbitrary Boundaries	114
3.4	Elementary Solutions	117
3.4.1	Solutions of the Disk Equation	117
3.4.2	Elementary Cases	120
3.5	Beam-type Disks	123
3.6	St. Venant's Principle	132
3.7	The Isotropic Half-Plane	134
3.7.1	Decay Behaviour of Boundary Perturbations	134
3.7.2	The Half-Plane Under Periodic Boundary Load	139
3.7.3	The Half-Plane Under Non-periodic Load	145
3.8	The Effective Width	151
3.8.1	Effective Width of Flanges of Beams Under Bending	151
3.8.2	Effective Width for Load Introductions	157
	References	161
4	Isotropic Disks in Polar Coordinates	163
4.1	Fundamentals	163
4.1.1	Basic Equations	163
4.1.2	The Displacement Method	166
4.1.3	The Force Method	167
4.2	Energetic Consideration	170
4.2.1	Strain Energy	170
4.2.2	Energetic Derivation of the Basic Equations	172
4.3	Elementary Cases	178
4.4	Rotationally Symmetric Disks	179
4.5	Non-rotationally Symmetric Circular Disks	186
4.6	Wedge-shaped Disks	190
4.7	Disks with Circular Holes	192
	References	198
5	Approximation Methods for Isotropic Disks	201
5.1	The Displacement-Based Ritz Method	201
5.2	The Force-Based Ritz Method	211
5.3	Finite Elements for Disks	214
	References	218
6	Anisotropic Disks	219
6.1	Basic Equations	219
6.1.1	Cartesian Coordinates	219
6.1.2	Polar Coordinates	223
6.2	Elementary Cases	226
6.3	Beam-type Disks	228
6.4	Decay Behaviour of Edge Perturbations	232
6.5	Orthotropic Circular Ring Disks	235
6.6	Orthotropic Circular Arc Disks	236

6.7	Layered Circular Ring Disks	243
6.8	Layered Circular Arc Disks	245
	References	249

Part III Plates

7	Kirchhoff Plate Theory in Cartesian Coordinates	253
7.1	Introduction	253
7.2	The Kirchhoff Plate Theory	254
7.2.1	Assumptions, Kinematics and Displacement Field	254
7.2.2	Strain and Stress Field	257
7.2.3	Force and Moment Flows, Constitutive Law	260
7.2.4	Transformation Rules	264
7.3	Effective Stiffnesses for Selected Plate Structures	265
7.3.1	Homogeneous Plate of Orthotropic Material	266
7.3.2	Homogeneous Plate of Isotropic Material	266
7.3.3	Reinforced Concrete Plate	266
7.3.4	Isotropic Plate Reinforced by Equidistant Stiffeners	267
7.3.5	Isotropic Plate Reinforced by Equidistant Ribs	267
7.3.6	Corrugated Metal Sheet	268
7.3.7	Symmetrical Cross-Ply Composite Laminate	268
7.4	Basic Equations of Plate Bending in Cartesian Coordinates	270
7.4.1	Displacement Differential Equation	270
7.4.2	Equivalent Transverse Shear Forces	272
7.4.3	Boundary Conditions	275
7.5	Elementary Solutions of the Plate Equation	278
7.6	Bending of Plate Strips	280
7.7	Navier Solution for Static Plate Bending Problems	283
7.7.1	Determination of the Plate Deflection	283
7.7.2	Moments, Forces and Stresses of the Plate	286
7.7.3	Special Load Cases	288
7.8	Lévy-type solutions for static plate bending problems	291
7.8.1	Introduction	291
7.8.2	Orthotropic Plates	291
7.8.3	Isotropic Plates	295
7.9	Energetic Consideration of Plate Bending	298
7.9.1	Principle of the Minimum of the Total Elastic Potential	298
7.9.2	Principle of Virtual Displacements	301
7.9.3	Plate with Arbitrary Boundary	303
7.10	Plate on Elastic Foundation	307
7.11	The Membrane	310
	References	311

8	Approximation Methods for the Kirchhoff Plate	313
8.1	The Ritz Method	313
8.2	The Galerkin Method	329
8.3	The Finite Element Method	332
	References	332
9	Kirchhoff Plate Theory in Polar Coordinates	333
9.1	Transition to Polar Coordinates	333
9.2	Basic Equations	335
9.3	Rotationally Symmetric Bending of Circular Plates	340
9.3.1	Basic Equations	340
9.3.2	Plates Under Constant Surface Load	341
9.3.3	Plates Under Centric Point Force	344
9.3.4	Plate Under Edge Moments	347
9.3.5	Plate Under Partial Load	348
9.3.6	Circular Ring Plates	350
9.4	Asymmetric Bending of Circular Plates	353
9.5	Strain Energy	356
	References	357
10	Higher-order Plate Theories	359
10.1	First-Order Shear Deformation Theory	360
10.1.1	Kinematics and Constitutive Equations	360
10.1.2	Determination of the Shear Correction Factor K	364
10.1.3	Equilibrium and Boundary Conditions	365
10.1.4	Strain Energy	368
10.1.5	Bending of Plate Strips	368
10.1.6	Navier Solution	371
10.1.7	Lévy-type solutions	372
10.1.8	The Ritz Method	372
10.2	Third-Order Shear Deformation Theory According to Reddy	376
10.2.1	Kinematics	376
10.2.2	Strains and Constitutive Equations	378
10.2.3	Equilibrium Conditions	382
10.2.4	Navier Solution	385
10.2.5	The Ritz Method	387
	References	390
11	Plate Buckling	391
11.1	Basic Equations	391
11.2	Navier Solution	395
11.2.1	Biaxial Load	398
11.3	Energy Methods for the Solution of Plate Buckling Problems	401

11.3.1	Introduction	401
11.3.2	The Rayleigh Quotient	403
11.3.3	The Ritz Method	408
	References	413
12	Geometrically Nonlinear Analysis	415
12.1	Kirchhoff Plate Theory	415
12.1.1	Energetic Consideration	415
12.1.2	Th. V. Kármán equations	421
12.1.3	Discussion of the Boundary Terms	424
12.1.4	Inner and External Potential	426
12.1.5	Special Cases	430
12.2	Bending of Plates with Large Deflections	432
12.2.1	Solution by Series Expansion	432
12.2.2	The Galerkin Method	433
12.2.3	The Ritz Method	434
12.3	First-Order Shear Deformation Theory	440
	References	444
13	Laminated Plates	445
13.1	Introduction	445
13.2	Classical Laminated Plate Theory	446
13.2.1	Introduction	446
13.2.2	Assumptions and Kinematics	447
13.2.3	Strains and Stresses	450
13.3	Constitutive Law	453
13.4	Coupling Effects	455
13.4.1	Shear Coupling	456
13.4.2	Bending-Twisting Coupling	457
13.4.3	Bending-extension Coupling	457
13.5	Special Laminates	458
13.5.1	Isotropic Single Layer	458
13.5.2	Orthotropic Single Layer	459
13.5.3	Anisotropic Single Layer/Off-axis Layer	460
13.5.4	Symmetric Laminates	460
13.5.5	Cross-ply Laminates	460
13.5.6	Angle-ply Laminates	461
13.5.7	Quasi-isotropic Laminates	462
13.6	Basic Equations and Boundary Conditions	463
13.6.1	Equilibrium Conditions	463
13.6.2	Displacement Differential Equations	465
13.6.3	Boundary Conditions	467
13.7	Navier Solutions	468
13.7.1	Bending of a Symmetric Cross-Ply Laminate	468

13.7.2	Bending of an Unsymmetric Cross-Ply Laminate $[(0^\circ/90^\circ)_N]$	469
13.7.3	Bending of an Unsymmetric Angle-ply Laminate $[(\pm\theta)_N]$	472

Part IV Shells

14	Introduction to Shell Structures	477
14.1	Introduction.....	477
14.2	Shells of Revolution.....	478
14.3	Load Cases.....	481
14.4	Classical Shell Theory.....	483
14.4.1	Assumptions.....	483
14.4.2	Stresses; Force and Moment Quantities.....	484
14.4.3	Strains and Displacements.....	487
	References.....	488
15	Membrane Theory of Shells of Revolution	491
15.1	Assumptions.....	491
15.2	Equilibrium Conditions for Shells of Revolution.....	494
15.2.1	Equilibrium Conditions.....	494
15.2.2	Rotational Symmetric Load.....	496
15.3	Selected Solutions for Shells of Revolution.....	499
15.3.1	Circular Cylindrical Shells.....	499
15.3.2	Spherical Shells.....	502
15.3.3	Conical Shells.....	507
15.4	Kinematics of Shells of Revolution.....	508
15.5	Constitutive Equations.....	513
15.6	Displacement Solutions for Rotationally Symmetric Loads.....	514
15.7	Energetic Derivation of the Basic Equations.....	518
	References.....	521
16	Bending Theory of Shells of Revolution	523
16.1	Basic Equations.....	523
16.1.1	Equilibrium Conditions.....	523
16.1.2	Kinematic Equations.....	527
16.1.3	Constitutive Equations.....	531
16.1.4	Displacement Differential Equations for the Circular Cylindrical Shell.....	532
16.1.5	Boundary Conditions under Rotationally Symmetric Load.....	532
16.2	Container Theory of the Circular Cylindrical Shell.....	533
16.2.1	Basic Equations.....	533
16.2.2	The Container Equation.....	537
16.2.3	Solutions for the Container Equation.....	538

16.3	The Force Method	544
16.4	Edge Perturbations of the Spherical Shell	547
16.5	Edge Perturbations of Arbitrary Shells of Revolution	553
16.6	Circular Cylindrical Shell under Arbitrary Load	556
16.6.1	Basic Equations	556
16.6.2	Approximation According to Donnell	562
16.6.3	Solution of the Basic Equations	563
16.6.4	Boundary Conditions	565
16.7	Laminated Shells	566
16.7.1	Basic Equations	566
16.7.2	Cross-ply Laminated Cylindrical Shells under Rotationally Symmetric Load.	570
