

Table of contents

Abstract	v
Kurzfassung	vii
Nomenclature	xi
1 Introduction	1
1.1 Motivation	1
1.2 State of the art	2
1.3 Objectives and structure	5
2 Theoretical background	7
2.1 Fundamentals of continuum mechanics	7
2.1.1 Kinematics	8
2.1.2 Stress	14
2.1.3 Balance principles	17
2.1.4 Hyperelasticity	22
2.2 Bulk material failure	35
2.3 Fracture mechanics	47
2.4 Finite fracture mechanics	54
3 Samples and finite element models	63
3.1 Unnotched specimens	63
3.1.1 Dumbbell specimens	63
3.1.2 Bulge specimens	64
3.1.3 Uniaxial compression specimens	65
3.1.4 Tubular lap shear specimens	65
3.2 Notched specimens	66
3.2.1 H-shaped specimens	66
3.2.2 Notched tubular lap joints	68
3.2.3 Pancake specimens	69
3.2.4 Cleavage double cantilever beam specimens	70
3.2.5 Out-of-plane shear double cantilever beam specimens	72

Table of contents

4	Experimental material characterization	75
4.1	State of the art	76
4.2	Characterization of the constitutive behavior	77
4.3	Bulk material extensibility	81
4.4	Fracture toughness	83
4.4.1	Cleavage tests	84
4.4.2	Out-of-plane shear tests	93
5	Bulk material failure	99
5.1	State of the art	99
5.2	Generalized deviatoric function	101
5.3	Equivalent strain failure criterion for hyperelastic media	111
5.4	Combined distortional–dilatational failure mode concept	122
6	Nucleation of finite cracks in hyperelastic materials	127
6.1	State of the art	127
6.2	Mixed-mode crack nucleation criterion	129
6.3	Failure prediction	132
6.3.1	Simple shear test	132
6.3.2	Pull-off and tubular shear tests	135
6.3.3	Pancake test	136
6.3.4	Discussion	138
6.4	Crack nucleation, crack growth and crack arrest	141
6.5	Derivation of a simple design tool	148
7	Hyperelastic weak interface model	151
7.1	State of the art	152
7.2	Sandwich-type model for nonlinear elastic adhesives	153
7.3	Stress and strain analysis	159
7.4	Failure prediction	165
8	Conclusions and perspectives	171
	References	175
