Abstract — V

Preface — VII

List of contributors — XI

Andrey V. Tarasov

Chapter 1

Thermal analysis: a guide through catalyst's synthesis and reaction process — 1

Bénédicte Prélôt and Jerzy Zając

Chapter 2

Contribution of isothermal titration calorimetry to elucidate the mechanism of adsorption from dilute aqueous solutions on solid surfaces: data processing, analysis, and interpretation — 47

Basile Galey, Nuno Batalha, Aline Auroux, and Georgeta Postole

Chapter 3

Thermal analysis and solid-state hydrogen storage: Mg/MgH₂ system case study — 91

Vincent Folliard and Aline Auroux

Chapter 4

Using calorimetry to study catalytic surfaces and processes for biomass valorization — 123

María-Guadalupe Cárdenas-Galindo and Brent E. Handy

Chapter 5

The correspondence of calorimetric studies with DFT simulations in heterogeneous catalysis — 159

Mohamed Zbair, Elliot Scuiller, Patrick Dutournié, and Simona Bennici

Chapter 6

Major concern regarding thermophysical parameters' measurement techniques of thermochemical storage materials — 183

Jean-Yves Coxam and Karine Ballerat-Busserolles

Chapter 7

Calorimetric methods for key properties in refrigeration cycles — 223

Rodica Chiriac, François Toche, and Olivier Boyron

Chapter 8

Calorimetry and thermal analysis for the study of polymer properties — 245

Jyoti Shanker Pandey, Asheesh Kumar, and Nicolas von Solms

Chapter 9

Role of calorimetry in clathrate hydrate research — 293

Ljiljana Damjanović-Vasilić

Chapter 10

Thermal methods as a tool for studying cultural heritage — 311

Vesna Rakić, Steva Lević, and Vladislav Rac

Chapter 11

The application of calorimetry and thermal methods of analysis in the investigation of food — 341

Index — 393
