**Preface** *XIII*

**Symbols** *XV*

|          |                                                               |           |
|----------|---------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction</b>                                           | <b>1</b>  |
| 1.1      | Overview of Membrane Science and Technology                   | 1         |
| 1.2      | History of Membrane Science and Technology                    | 4         |
| 1.3      | Advantages and Limitations of Membrane Processes              | 7         |
| 1.4      | The Membrane-Based Industry: Its Structure and Markets        | 9         |
| 1.5      | Future Developments in Membrane Science and Technology        | 12        |
| 1.5.1    | Biological Membranes                                          | 14        |
| 1.6      | Summary                                                       | 16        |
|          | Recommended Reading                                           | 16        |
|          | References                                                    | 17        |
| <b>2</b> | <b>Fundamentals</b>                                           | <b>19</b> |
| 2.1      | Introduction                                                  | 19        |
| 2.2      | Definition of Terms                                           | 19        |
| 2.2.1    | The Membrane and Its Function                                 | 19        |
| 2.2.2    | Membrane Materials and Membrane Structures                    | 21        |
| 2.2.2.1  | Symmetric and Asymmetric Membranes                            | 22        |
| 2.2.2.2  | Porous Membranes                                              | 23        |
| 2.2.2.3  | Homogeneous Dense Membranes                                   | 23        |
| 2.2.2.4  | Ion-Exchange Membranes                                        | 24        |
| 2.2.2.5  | Liquid Membranes                                              | 24        |
| 2.2.2.6  | Fixed Carrier Membranes                                       | 24        |
| 2.2.2.7  | Other Membranes                                               | 25        |
| 2.2.2.8  | Membrane Geometries                                           | 25        |
| 2.2.3    | Mass Transport in Membranes                                   | 27        |
| 2.2.4    | Membrane Separation Properties                                | 31        |
| 2.2.5    | Definition of Various Membrane Processes                      | 33        |
| 2.2.5.1  | Pressure-Driven Membrane Processes                            | 34        |
| 2.2.5.2  | Activity and Concentration Gradient Driven Membrane Processes | 35        |

|          |                                                                                            |    |
|----------|--------------------------------------------------------------------------------------------|----|
| 2.2.5.3  | Electrical Potential and Electrochemical Potential Driven Processes                        | 36 |
| 2.3      | Fundamentals of Mass Transport in Membranes and Membrane Processes                         | 37 |
| 2.3.1    | Basic Thermodynamic Relationships with Relevance to Membrane Processes                     | 37 |
| 2.3.2    | Basic Electrochemical Relationships with Relevance to Membrane Processes                   | 42 |
| 2.3.2.1  | Electron and Ion Conductivity and Ohm's Law                                                | 42 |
| 2.3.2.2  | Ion Conductivity, Ion Mobility, and Drift Speed                                            | 43 |
| 2.3.2.3  | Coulomb's Law and the Electric Field Effect on Ions in Solution                            | 45 |
| 2.3.2.4  | The Electric Field Effect in Electrolyte Solutions and the Debye-Hückel Theory             | 46 |
| 2.3.2.5  | Electrical Dipoles and Intermolecular Forces                                               | 48 |
| 2.3.3    | Chemical and Electrochemical Equilibrium in Membrane Systems                               | 49 |
| 2.3.3.1  | Water Dissociation Equilibrium and the pH- and pK Values of Acids and Bases                | 49 |
| 2.3.3.2  | Osmotic Equilibrium, Osmotic Pressure, Osmosis, and Reverse Osmosis                        | 51 |
| 2.3.3.3  | The Electrochemical Equilibrium and the Donnan Potential between a Membrane and a Solution | 54 |
| 2.3.3.4  | The Donnan Exclusion of the Co-ions                                                        | 55 |
| 2.3.4    | Fluxes and Driving Forces in Membrane Processes                                            | 57 |
| 2.3.4.1  | Viscous Flow through Porous Membranes                                                      | 58 |
| 2.3.4.2  | Diffusion in Liquids and Dense Membranes                                                   | 59 |
| 2.3.4.3  | Diffusion in Solid or Dense Materials                                                      | 63 |
| 2.3.4.4  | Ion Flux and Electrical Current                                                            | 65 |
| 2.3.4.5  | Diffusion of Ions in an Electrolyte Solution                                               | 66 |
| 2.3.4.6  | Ion Mobility and Ion Radius in Aqueous Solutions                                           | 67 |
| 2.3.4.7  | Migration of Ions and the Electrical Current                                               | 68 |
| 2.3.4.8  | The Transport Number and the Permselectivity of Ion-exchange Membranes                     | 69 |
| 2.3.4.9  | Interdependence of Fluxes and Driving Forces                                               | 70 |
| 2.3.4.10 | Gas Flux through Porous Membranes, the Knudsen and Surface Diffusion and Molecular Sieving | 71 |
| 2.3.4.11 | Surface Diffusion and Capillary Condensation of Gases                                      | 73 |
| 2.4      | Mathematical Description of Mass Transport in Membranes                                    | 74 |
| 2.4.1    | Mass Transport Described by the Thermodynamics of Irreversible Processes                   | 75 |
| 2.4.2    | Mass Transport Described by the Stefan–Maxwell Equations                                   | 77 |
| 2.4.3    | Membrane Mass Transport Models                                                             | 79 |
| 2.4.3.1  | The Solution–Diffusion Model                                                               | 79 |
| 2.4.3.2  | The Pore Flow Model and the Membrane Cut-off                                               | 84 |
|          | References                                                                                 | 87 |

|          |                                                                                              |           |
|----------|----------------------------------------------------------------------------------------------|-----------|
| <b>3</b> | <b>Membrane Preparation and Characterization</b>                                             | <b>89</b> |
| 3.1      | Introduction                                                                                 | 89        |
| 3.2      | Membrane Materials                                                                           | 89        |
| 3.2.1    | Polymeric Membrane Materials                                                                 | 90        |
| 3.2.1.1  | The Physical State of a Polymer                                                              | 90        |
| 3.2.1.2  | Crystallinity and Glass Transition Temperature                                               | 92        |
| 3.2.1.3  | The Glass Transition Temperature and the Free Volume                                         | 93        |
| 3.2.1.4  | Molecular Weight of a Polymer Chain                                                          | 94        |
| 3.2.1.5  | Macroscopic Structures of Polymers                                                           | 95        |
| 3.2.1.6  | Polymer Chain Interaction and Its Effect on Physical Properties                              | 97        |
| 3.2.1.7  | The Chemical Structure of the Polymer and Its Effect on Polymer Properties                   | 98        |
| 3.2.2    | Inorganic Membrane Materials                                                                 | 100       |
| 3.2.2.1  | Metal Membranes                                                                              | 100       |
| 3.2.2.2  | Glass Membranes                                                                              | 101       |
| 3.2.2.3  | Carbon Membranes                                                                             | 101       |
| 3.2.2.4  | Metal Oxide Membranes                                                                        | 102       |
| 3.2.3    | Liquid Membrane Materials                                                                    | 103       |
| 3.3      | Preparation of Membranes                                                                     | 104       |
| 3.3.1    | Preparation of Symmetric Porous Membranes                                                    | 104       |
| 3.3.1.1  | Isotropic Membranes Made by Sintering of Powders, Stretching of Films, and Template Leaching | 106       |
| 3.3.1.2  | Membranes Made by Pressing and Sintering of Polymer Powders                                  | 106       |
| 3.3.1.3  | Membranes Made by Stretching a Polymer Film of Partial Crystallinity                         | 107       |
| 3.3.1.4  | Membranes Made by Track-Etching                                                              | 108       |
| 3.3.1.5  | Membranes Made by Micro-Lithography and Etching Techniques                                   | 109       |
| 3.3.1.6  | Glass Membranes Made by Template Leaching                                                    | 112       |
| 3.3.1.7  | Porous Graphite Membranes Made by Pyrolyzing Polymer Structures                              | 112       |
| 3.3.1.8  | Symmetric Porous Polymer Membranes Made by Phase Inversion Techniques                        | 112       |
| 3.3.2    | Preparation of Asymmetric Membranes                                                          | 114       |
| 3.3.2.1  | Preparation of Integral Asymmetric Membranes                                                 | 115       |
| 3.3.3    | Practical Membrane Preparation by Phase Inversion                                            | 117       |
| 3.3.3.1  | Temperature-Induced Membrane Preparation                                                     | 117       |
| 3.3.3.2  | Diffusion-Induced Membrane Preparation                                                       | 118       |
| 3.3.4    | Phenomenological Description of the Phase Separation Process                                 | 124       |
| 3.3.4.1  | Temperature-Induced Phase Separation Process                                                 | 125       |
| 3.3.4.2  | Thermodynamics of a Temperature-Induced Phase Separation of a Two-Component Mixture          | 126       |
| 3.3.4.3  | The Diffusion-Induced Phase Separation Process                                               | 133       |
| 3.3.4.4  | Structures of Asymmetric Membranes Obtained by Phase Inversion                               | 136       |

|         |                                                                                              |     |
|---------|----------------------------------------------------------------------------------------------|-----|
| 3.3.4.5 | Identification of Various Process Parameters in the Preparation of Phase Inversion Membranes | 136 |
| 3.3.4.6 | General Observation Concerning the Structure of Phase Inversion Membranes                    | 137 |
| 3.3.4.7 | The Selection of a Polymer/Solvent/Precipitant System for the Preparation of Membranes       | 144 |
| 3.3.4.8 | Membrane Pre- and Post-Precipitation Treatment                                               | 148 |
| 3.3.5   | Preparation of Composite Membranes                                                           | 149 |
| 3.3.5.1 | Techniques Used for the Preparation of Polymeric Composite Membranes                         | 151 |
| 3.3.6   | Preparation of Inorganic Membranes                                                           | 155 |
| 3.3.6.1 | Suspension Coating and the Sol–Gel Process                                                   | 157 |
| 3.3.6.2 | Perovskite Membranes                                                                         | 158 |
| 3.3.6.3 | Zeolite Membranes                                                                            | 159 |
| 3.3.6.4 | Porous Carbon Membranes                                                                      | 160 |
| 3.3.6.5 | Porous Glass Membranes                                                                       | 161 |

| 6.1      | Introduction                                                              | 381        |
| 6.2      | Membrane Filtration Processes                                             | 381        |
| 6.2.1    | Recovery Rate, Membrane Rejection, Retentate, and Filtrate Concentrations | 382        |
| 6.2.1.1  | Solute Losses in Membrane Filtration Processes                            | 386        |
| 6.2.1.2  | Operation Modes in Filtration Processes                                   | 387        |
| 6.2.1.3  | Reverse Osmosis Process Design                                            | 388        |
| 6.2.1.4  | Stages and Cascades in Membrane Filtration                                | 392        |
| 6.2.1.5  | Ultra- and Microfiltration Process Design                                 | 395        |
| 6.2.1.6  | Ultrafiltration Process Design                                            | 401        |
| 6.2.1.7  | Diafiltration                                                             | 403        |
| 6.2.2    | Costs of Membrane Filtration Processes                                    | 406        |
| 6.2.2.1  | Energy Requirements in Filtration Processes                               | 406        |
| 6.2.2.2  | Investment- and Maintenance-Related Costs in Filtration Processes         | 411        |
| 6.3      | Gas Separation                                                            | 412        |
| 6.3.1    | Gas Separation Process Design and Operation                               | 413        |
| 6.3.1.1  | Staging in Gas Separation and the Reflux Cascade                          | 419        |
| 6.3.2    | Energy Consumption and Cost of Gas Separation                             | 421        |
| 6.4      | Pervaporation                                                             | 422        |
| 6.4.1    | Pervaporation Modes of Operation                                          | 424        |
| 6.4.1.1  | Staging and Cascades in Pervaporation                                     | 425        |
| 6.4.2    | Pervaporation Energy Consumption and Process Costs                        | 428        |
| 6.5      | Dialysis                                                                  | 428        |
| 6.5.1    | Dialysis Process and System Design                                        | 430        |
| 6.5.1.1  | Dialyzer Membrane Module Constructions                                    | 431        |
| 6.5.2    | Process Costs in Dialysis                                                 | 435        |
| 6.6      | Electrodialysis and Related Processes                                     | 436        |
| 6.6.1    | Process Design in Conventional Electrodialysis                            | 436        |
| 6.6.1.1  | Operation of the Electrodialysis Stacks in a Desalination Plant           | 441        |
| 6.6.2    | Process Costs in Electrodialysis                                          | 442        |
