Preface — V

1 Introduction — 1

- 1.1 Catalysis, reaction rate, and equilibrium — 1
- 1.2 Catalyst and reactant phases — 2
- 1.3 Catalysis and daily life — 4
- 1.4 Basic concepts of surface catalysis — 8
 - 1.4.1 Reaction rate — 8
 - 1.4.2 Activity, selectivity, and stability — 11
 - 1.4.3 Catalyst and catalytic process — 13
- 1.5 Surface catalysis: an art or a science? — 17
- 1.6 Catalyst research: an overview — 23
- References — 26

2 Surface catalysis: the scene and the play — 28

- 2.1 Solids — 28
- 2.2 Surfaces — 38
 - 2.2.1 Surface structures — 38
 - 2.2.2 Surface chemistry — 48
- 2.3 Particle architecture in catalytic materials — 52
 - 2.3.1 Size, porosity, and structural heterogeneity of catalyst particles — 52
 - 2.3.2 Supports for heterogeneous catalysts — 55
 - 2.3.2.1 Silica (SiO_2) — 56
 - 2.3.2.2 Alumina (Al_2O_3) — 57
 - 2.3.2.3 Alumosilicates/zeolites — 59
 - 2.3.2.4 Metal-organic frameworks — 67
 - 2.3.2.5 Titania, zirconia, ceria — 72
 - 2.3.2.6 Carbon materials — 75
 - 2.3.3 Support and supported species — 80
 - 2.3.4 Alternative catalyst architectures — 93
- 2.4 Adsorption — 95
 - 2.4.1 Adsorption and desorption: phenomena and classification — 95
 - 2.4.2 Physisorption and chemisorption — 97
 - 2.4.3 Description of equilibria in gas-phase adsorption — 102
 - 2.4.4 Description of equilibria in liquid-phase adsorption — 105
- 2.5 Surface reactions — 106
 - 2.5.1 Thermal catalysis — 106
 - 2.5.2 Photocatalysis — 113
- 2.6 Reaction mechanisms and reaction kinetics in thermal catalysis — 115
 - 2.6.1 Reaction kinetics of surface processes — 115

2.6.2	Influences of transport limitations on reaction rates —	121
2.7	Electrochemistry and electrocatalysis —	133
2.8	Reactors for surface-catalytic reactions —	137
2.8.1	Ideal and real reactors —	137
2.8.2	Reactors for thermocatalytic processes —	140
2.8.3	Reactors for photocatalytic processes —	147
2.8.4	Reactors for electrochemical conversions —	149
	References —	150
3	Tools of catalysis research —	158
3.1	Catalyst preparation —	158
3.1.1	Formation of solids from fluid phases —	158
3.1.1.1	Precipitation and coprecipitation —	159
3.1.1.2	Crystallization: synthesis of zeolites and MOFs —	165
3.1.1.3	Sol-gel transition —	170
3.1.1.4	Solidification of melts —	173
3.1.1.5	Solids from the gas phase —	174
3.1.1.6	Flame-based synthesis routes —	176
3.1.2	Shaping of catalyst pellets —	177
3.1.3	Deposition of active components on the internal surface of porous supports —	179
3.1.3.1	Equilibrium adsorption and ion exchange —	180
3.1.3.2	Impregnation —	185
3.1.3.3	Deposition-precipitation —	187
3.1.3.4	Anchoring, grafting, and surface organometallic chemistry —	188
3.1.3.5	Deposition of colloids and melt infiltration —	192
3.1.3.6	Deposition of precursors from the gas phase —	194
3.1.3.7	Solid-state methods —	196
3.1.4	Thermal conditioning —	196
3.1.5	Activation —	201
3.1.6	Preparation of catalytically active electrodes —	203
3.2	Rate measurements in surface catalysis —	204
3.2.1	Thermal catalysis —	204
3.2.2	Reactors for photocatalytic rate measurements —	219
3.2.3	Measuring electrochemical reaction rates —	222
3.3	Application-oriented characterization of solid catalysts —	225
3.3.1	Density and porosity of particles and beds —	225
3.3.2	Stability toward mechanical stress —	227
3.4	Research-oriented characterization of solid catalysts —	228
3.4.1	Analysis of surface area and porosity —	228
3.4.1.1	Capillary phenomena in pores —	229

3.4.1.2	Measuring adsorption data —	232
3.4.1.3	Specific surface area: the BET method —	235
3.4.1.4	Porosity analysis by physisorption —	237
3.4.1.5	Porosity Analysis by mercury intrusion —	239
3.4.1.6	Analysis of particle dispersion by chemisorption —	240
3.4.2	Thermal analysis and calorimetry —	242
3.4.2.1	Standard methods: DTA and DTG —	243
3.4.2.2	Calorimetry in stationary and dynamic modes —	248
3.4.2.3	Temperature-programmed desorption (TPD) and adsorption (TPA) —	252
3.4.2.4	Temperature-programmed surface reaction (TPSR) —	261
3.4.2.5	Temperature-programmed reduction (TPR), oxidation (TPO), and sulfidation (TPS) —	263
3.4.3	Scattering and diffraction —	268
3.4.3.1	Elastic and inelastic scattering —	268
3.4.3.2	Elastic scattering at ordered arrays: diffraction —	270
3.4.3.3	X-ray diffraction (XRD) —	279
3.4.3.4	Other diffraction and scattering techniques —	289
3.4.4	X-ray absorption fine structure (XAFS) —	293
3.4.4.1	Fine structure in X-ray absorption —	294
3.4.4.2	Acquisition and interpretation of X-ray absorption spectra —	300
3.4.4.3	XAFS in examples —	308
3.4.5	Surface analysis by photoemission techniques —	312
3.4.5.1	Photoemission and surface sensitivity —	312
3.4.5.2	Measuring and assigning photoelectron spectra —	315
3.4.5.3	Sources of analytical information —	319
3.4.5.3.1	Binding energies —	320
3.4.5.3.2	Opportunities based on XPS line shapes —	322
3.4.5.3.3	Surface sensitivity and quantitative analysis —	324
3.4.5.3.4	Structural sensitivity by combining XPS and XAES —	327
3.4.5.3.5	Ultraviolet photoelectron spectroscopy —	328
3.4.5.4	XPS: examples for the interpretation of spectra —	329
3.4.6	Surface analysis with ions: Secondary ion mass spectrometry (SIMS) and Low-energy ion scattering (LEIS) —	331
3.4.6.1	Interactions between low-energy ions and solids —	331
3.4.6.2	Secondary ion mass spectrometry (SIMS) —	333
3.4.6.3	Low-energy ion scattering (LEIS) —	334
3.4.7	Spectroscopy of electronic transitions: absorption of UV and visible light —	341
3.4.7.1	Electron transitions and their diagnostic potential —	341
3.4.7.2	Measuring UV-Vis spectra —	345
3.4.7.3	Typical applications of UV-Vis spectroscopy in catalyst research —	351
3.4.8	Vibrational spectroscopy —	354

3.4.8.1	Vibrations and vibrational spectra —	355
3.4.8.2	Excitation processes and spectroscopies —	360
3.4.8.3	Measuring IR spectra of heterogeneous catalysts —	362
3.4.8.4	IR spectroscopy with catalysts: typical applications —	367
3.4.8.5	Measuring Raman spectra of heterogeneous catalysts —	376
3.4.8.6	Raman spectroscopy in catalysis: typical applications —	380
3.4.9	Magnetic resonance spectroscopy —	383
3.4.9.1	Magnetism and magnetic resonance —	383
3.4.9.2	Electron paramagnetic resonance spectroscopy (EPR) —	391
3.4.9.3	Nuclear magnetic resonance spectroscopy (NMR) —	399
3.4.10	Mössbauer spectroscopy —	409
3.4.10.1	The Mössbauer effect —	409
3.4.10.2	Spectroscopy with the Mössbauer effect —	410
3.4.11	Imaging —	416
3.4.11.1	Transmission electron microscopy (TEM) —	418
3.4.11.2	Scanning electron microscopy (SEM) —	430
3.4.11.3	Scanning probe microscopy —	434
3.4.12	Electrochemical characterization techniques —	439
3.5	Computational chemistry in catalysis research —	443
3.5.1	Wave function-based quantum chemistry and density functional theory —	444
3.5.2	Cluster and periodic models —	449
3.5.3	Quantum chemistry in catalysis research: typical applications —	451
	References —	460

4	A close-up to some important aspects of surface catalysis —	475
4.1	A preface —	475
4.2	Structure and activity —	477
4.2.1	The Sabatier principle —	477
4.2.2	Electronic structure and catalytic activity on metal surfaces —	481
4.2.3	Spatial structure and catalytic activity —	489
4.2.4	Promoting activity —	498
4.3	Structure and selectivity —	504
4.3.1	Side products and strategies —	504
4.3.2	Shape selectivity —	510
4.3.3	Selective oxidation in the gas phase —	512
4.3.4	Selective hydrogenation —	519
4.3.5	Promoting selectivity —	523
4.4	Stability, regeneration, and reactivation —	525
4.4.1	Mechanisms of catalyst deactivation —	526
4.4.1.1	Poisoning and fouling —	527
4.4.1.2	Loss of active component —	531

4.4.1.3	Thermal effects —	532
4.4.1.4	Mechanical degradation —	534
4.4.2	Preventing catalyst decay/promoting stability —	535
4.4.3	Regeneration of catalysts and the end of their life cycle —	540
4.5	Types of reaction mechanisms —	542
4.5.1	Getting insight into surface processes —	542
4.5.2	Reaction types and catalytic mechanisms: catalysis on Brønsted sites, with nucleophilic oxygen, and via metal-carbon bonds —	545
4.5.2.1	Reactions catalyzed by solid Brønsted acids —	545
4.5.2.2	Allylic oxidation of propene —	554
4.5.2.3	Mechanisms involving metal-carbon bonds —	559
4.5.3	Site isolation and catalytic mechanism —	565
4.5.4	Mechanisms depending on transport steps —	574
4.5.5	Mechanisms involving pools of secondary species —	580
4.5.6	The multiplicity of sites and mechanisms —	581
4.6	Microkinetic modeling —	590
4.7	Heterogeneous catalysis in liquids: what is special? —	594
4.8	Structure and performance in photocatalysis —	601
4.9	Structure and performance in electrocatalysis —	606
4.9.1	Electrocatalytic reaction mechanisms —	606
4.9.2	Recent topics of electrocatalysis —	612
	References —	616

5	With catalysis into the Anthropocene age: strategies and a look ahead —	631
	References —	641

Appendix —	643
