Contents

Preface —— V

Part I: **Introduction**

1 Evaluation of separation processes —— 3
1.1 Ideal and real separations —— **3**
1.2 Separation factor – enrichment factor – depletion factor —— **3**
1.3 Separation factors required for analytical separations —— **4**
1.4 Limits of applicability of the separation factor – selectivity and specificity of separations —— **4**
General literature —— **6**

2 Classification of separation processes —— 7
2.1 Separations due to different distribution between two immiscible phases —— **7**
2.2 Separations due to different migration rates in one phase —— **7**
General literature —— **8**

3 Chemical reactions during separations —— 9
3.1 Reactions of the substance to be separated —— **9**
3.2 Masking of disturbances —— **9**
3.3 Separation by transport reaction in the gas phase —— **9**
3.4 Destruction of contaminants —— **11**
General literature —— **12**

4 Analytical application of incomplete separations —— 14
4.1 General —— **14**
4.2 Empirical yield determination —— **14**
4.3 Determination of yield with the aid of partition coefficients —— **14**
4.4 Isotope dilution method —— **15**
4.1.1 Definitions —— **15**
4.4.2 Simple isotope dilution with labeled substance (so called *direct* isotope dilution) —— **15**
4.4.3 Simple isotope dilution with unlabeled substance —— **16**
4.4.4 Double isotope dilution with unlabeled substance —— **17**
4.5 Separations with substoichiometric reagent addition —— **18**
4.5.1 Principle —— **18**
4.5.2 Saturation analysis —— **18**
4.5.3 Double isotope dilution with labeled substance —— **19**

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.5.4 Method according to Růžička & Starý — **19**
4.5.5 Scope of application and effectiveness of the method — **20**
4.6 Standard addition method — **21**
Literature to the text — **21**

5 Concentration data — 23
Literature to the text — **24**

Part II: **Separations due to different distribution between two immiscible phases**

6 Introduction — 27
6.1 Features of the single step – auxiliary phases – partition coefficient – partition isotherm — **27**
6.2 Effectiveness of separations by distribution – separation factor – graphical representation of effectiveness — **29**
6.3 Practically achievable separation factors — **32**
6.4 Improving separations through optimized choice of conditions — **33**
6.5 Improving separations by inserting auxiliary substances — **33**
6.6 Improve separations by exploiting different rates in setting the distribution equilibria or different reaction rates — **33**
6.7 Improving separations by repeating the single step — **34**
6.7.1 General – discontinuous and continuous mode of operation – closed-loop process — **34**
6.7.2 One-sided repetition — **34**
6.7.3 Systematic repetition (cascade) — **36**
6.7.4 Systematic repetition (triangular scheme – separation series) — **37**
6.7.5 Systematic repetition (separation columns) — **41**
6.7.6 Systematic repetition (thin film technology) — **56**
6.7.7 Countercurrent method — **57**
6.7.8 Cross-flow method — **58**
6.8 Overview — **58**
Literature to the text — **59**

7 Distribution between two liquids — 61
7.1 General — **61**
7.1.1 Historical development — **61**
7.1.2 Auxiliary phases – distribution isotherm – rate of equilibration– separation factors — **61**
7.1.3 Solvents – solvent mixtures – synergistic effect – extracted compounds – chemical reactions during distribution — **63**

7.1.4 pH distribution curves — **68**
7.1.5 Influence of equionic additives — **73**
7.1.6 Influence of complexing agents — **74**
7.1.7 Incomplete separations by distribution between two liquids (cf. 1st part, Chap. 4) — **75**
7.1.8 Disturbances — **75**
7.2 Separations by one-time equilibrium adjustment — **76**
7.2.1 Working method and devices — **76**
7.2.2 Applications — **76**
7.3 Separations by one-sided repetition — **78**
7.3.1 Discontinuous mode of operation — **78**
7.3.2 Continuous mode of operation — **79**
7.4 Separations by systematic repetition: Separation series — **82**
7.4.1 Discontinuous transport of the moving phase — **82**
7.4.2 Continuous advancement of the moving phase — **84**
7.4.3 Circulation method — **85**
7.5 Separations by systematic repetition: Column method (distribution chromatography) — **85**
7.5.1 Principle — **85**
7.5.2 Support material of the stationary phase — **85**
7.5.3 Column material and dimensions — **86**
7.5.4 Substance introduction — **86**
7.5.5 Stationary and mobile phase — **87**
7.5.6 Flow velocity of the mobile phase – pressure columns — **88**
7.5.7 Influence of the temperature — **89**
7.5.8 Stepwise elution – gradient elution — **90**
7.5.9 Isolation of components – elution curves – detectors — **90**
7.5.10 Efficacy of partition chromatography — **91**
7.6 Separations by systematic repetition: Thin-layer technique (thin-layer distribution chromatography) — **92**
7.7 Countercurrent distribution — **92**
Literature to the text — **93**

8 Solubility of gases in liquids — 95
8.1 General — **95**
8.1.1 Historical development — **95**
8.1.2 Auxiliary phases – distribution isotherm – equilibration rate – separation factors — **95**
8.1.3 Solvents — **97**
8.2 Separations by one-time equilibrium adjustment — **97**
8.2.1 Discontinuous mode of operation — **97**
8.2.2 Continuous mode of operation — **100**

8.2.3 Circulation method — **101**
8.3 Separations by one-sided repetition — **101**
8.4 Separations by systematic repetition: Column method (gas chromatography) — **103**
8.4.1 Principle — **103**
8.4.2 Inert support material for the stationary phase — **103**
8.4.3 Column material and dimensions — **104**
8.4.4 Sample transfer — **104**
8.4.5 Stationary phase — **106**
8.4.6 Mobile phase – circulation method — **108**
8.4.7 Flow rate of the mobile phase — **109**
8.4.8 Influence of temperature on the separations — **109**
8.4.9 Gradient elution and reverse gas chromatography — **111**
8.4.10 Isolation of individual components from the eluate — **112**
8.4.11 Elution curves and detectors — **113**
8.4.12 Identifying the bands of an elution diagram — **113**
8.4.13 Efficacy and scope of the method — **117**
8.5 Countercurrent method — **118**
8.6 Cross flow method — **118**
General literature — **118**
Literature to the text — **119**

9 Adsorption and absorption of gases on solids — 120
9.1 General — **120**
9.1.1 Historical development — **120**
9.1.2 Definitions — **120**
9.1.3 Auxiliary phases – distribution isotherms – speed of equilibrium adjustment — **120**
9.1.4 Desorption — **122**
9.1.5 Adsorbents — **122**
9.1.6 Absorbents — **127**
9.2 Separations by one-time equilibrium adjustment — **127**
9.3 Separations by one-sided repetition — **129**
9.3.1 Adsorption process — **129**
9.3.2 Absorption method — **129**
9.3.3 Circulation method — **129**
9.4 Separations by systematic repetition: Column method (gas adsorption chromatography) — **130**
9.4.1 Principle — **130**
9.4.2 Column material and dimensions — **130**
9.4.3 Stationary and mobile phase — **131**
9.4.4 Temperature influence — **132**

9.4.5 Gradient elution – reverse gas chromatography – displacement technique — **132**
9.4.6 Sampling of components – elution curves – detectors — **133**
9.4.7 Efficacy and scope of the method — **133**
9.5 Countercurrent method — **134**
General literature — **134**
Literature to the text — **134**

10 Adsorption of dissolved substances on solids — 137
10.1 General — **137**
10.1.1 Historical development — **137**
10.1.2 Auxiliary phases – distribution isotherms – speed of equilibration – irreversible adsorption — **137**
10.1.3 Adsorbents — **138**
10.1.4 Solvents in adsorption from solutions — **143**
10.1.5 Distribution coefficients and separation factors — **144**
10.2 Separations by one-time equilibrium adjustment — **145**
10.3 Separations by one-sided repetition — **146**
10.4 Separations by systematic repetition: Separation series — **148**
10.5 Separations by systematic repetition: Column methods (adsorption chromatography) — **149**
10.5.1 Principle — **149**
10.5.2 Column material and dimensions – filling the columns — **149**
10.5.3 Stationary and mobile phase — **150**
10.5.4 Substance task and loading of the columns — **150**
10.5.5 Influence of the flow velocity of the mobile phase — **151**
10.5.6 Influence of the temperature — **151**
10.5.7 Gradient elution — **152**
10.5.8 Closed loop recirculation procedure — **153**
10.5.9 Displacement technique – interposition of auxiliary substances — **154**
10.5.10 Detection — **154**
10.5.11 Efficacy and scope of the method — **155**
10.6 Separations by systematic repetition: Planar methods (thin-layer chromatography, paper chromatography) — **157**
10.6.1 Principle and adsorbents — **157**
10.6.2 Performing thin-layer chromatography — **158**
10.6.3 Performing paper chromatography — **159**
10.6.4 Detection and identification of the separated substances — **160**
10.6.5 Efficacy and scope of thin film methods — **160**
10.7 Cross-flow method — **162**
General literature — **162**

11 Ion exchange — 167
11.1 General — **167**
11.1.1 Historical development — **167**
11.1.2 Definitions – functional groups – exchange reactions – regeneration – titration curves – exchange capacity — **167**
11.1.3 Exchanger types – porosity and swelling — **170**
11.1.4 Auxiliary phases – exchange equilibria – distribution coefficients – exchange isotherm – selectivity and separation factors – exchange of ions of unequal valences – order of binding strengths of different ions — **173**
11.1.5 Influence of the distribution coefficients — **179**
11.1.6 Rate of equilibration — **181**
11.1.7 Side effects of ion exchange: neutral salt adsorption – uptake of nonelectrolytes – sieve effect – irreversible adsorption — **182**
11.2 Separations by one-time equilibration — **183**
11.3 Separations by one-sided repetition — **184**
11.4 Separations by systematic repetition: Column methods (ion exchange chromatography) — **186**
11.4.1 Principle — **186**
11.4.2 Column material and dimensions — **187**
11.4.3 Stationary and mobile phase – loading — **187**
11.4.4 Influence of the flow rate of the mobile phase — **188**
11.4.5 Influence of the temperature — **189**
11.4.6 Stepwise elution – gradient elution — **189**
11.4.7 Displacement technique — **189**
11.4.8 Isolation of components – detectors — **190**
11.4.9 Efficacy and scope of the method — **190**
11.5 Separations by systematic repetition: Planar technique (thin-layer ion exchange chromatography) — **193**
11.6 Countercurrent method — **194**
General literature — **194**

12 Solubility: Precipitation methods — 196
12.1 General — **196**
12.1.1 Historical development — **196**
12.1.2 Definitions — **196**
12.1.3 Auxiliary phases – precipitation reactions – precipitation pH values – speed of precipitation reactions — **196**
12.1.4 Solubility – influencing the solubility — **199**
12.1.5 Supersaturation – failure to precipitate at low concentrations — **202**
12.1.6 Entrainment effect – reducing the carry away — **203**
12.1.7 Separation of precipitate and solution: Filtration – centrifugation — **206**

12.2 Separations by one-time equilibration: Working with an auxiliary phase — **209**
12.2.1 Inorganic precipitation by double conversion — **209**
12.2.2 Organic precipitation reagents for inorganic ions — **210**
12.2.3 Precipitation reactions for organic substances: Double reaction – addition – condensation – inclusion compounds – antigen-antibody reaction – protein precipitation for structure elucidation — **212**
12.2.4 Precipitation by reduction: Gaseous and dissolved reducing agents — **216**
12.2.5 Precipitation by reduction or oxidation: Electrolysis — **216**
12.3 Separations by one-time equilibration: Working with two auxiliary phases — **230**
12.3.1 Precipitation — **230**
12.3.2 Precipitation with solid reagents – precipitation exchange — **234**
12.3.3 Two-phase precipitation — **235**
12.3.4 Cementation — **235**
12.4 Separations by one-sided repetition — **236**
12.4.1 Re-precipitation — **236**
12.4.2 Fractionated precipitation — **237**
12.4.3 Precipitation exchange – precipitation with ion exchangers — **237**
12.5 Separations by systematic repetition: Precipitation chromatography — **238**
12.6 Separations by systematic repetition: Thin-layer technique (precipitation paper chromatography) — **238**
General literature — **239**
Literature to the text — **241**

13 Solubility: Extraction and phase analysis — 243
13.1 General – definitions – auxiliary phases — **243**
13.2 Separations by one-time equilibrium adjustment — **243**
13.3 Separations by one-sided repetition — **243**
13.3.1 Repeated extraction — **243**
13.3.2 Circulation method — **245**
13.3.3 Fractionated extraction – gradient extraction — **246**
13.3.4 Scope of application and effectiveness of the method — **248**
13.4 Countercurrent method — **250**
General literature — **250**
Literature to the text — **251**

14 Solubility: Crystallization — 253
14.1 General (definitions – auxiliary phases – melting and solubility diagrams) — **253**
14.2 Separations by one-time crystallization — **255**
14.3 Separations by one-sided repetition — **256**
14.3.1 Repeated crystallization from melts (zone melts) — **256**
14.3.2 Repeated crystallization from solutions — **258**
14.4 Systematic repetition (crystallization in the triangular scheme – separation series – column method) — **258**
14.5 Countercurrent method — **261**
General literature — **261**
Literature to the text — **261**

15 Volatilization: Distillation and related processes — 263
15.1 General — **263**
15.1.1 Historical development — **263**
15.1.2 Definitions – auxiliary phases (auxiliary substances) — **263**
15.1.3 Vapor pressure curves of pure substances – graphical and mathematical representation – Clausius-Clapeyron equation – Cox Diagrams — **263**
15.1.4 Vapor pressures of binary liquid mixtures – Raoult's law – vapor pressure diagrams – boiling diagrams – equilibrium diagrams — **266**
15.1.5 Volatility – relative volatility (separation factor) – presentation of the result of distillations (distillation curves) — **275**
15.2 Separations by one-time equilibrium adjustment — **278**
15.2.1 Head space analysis – extraction of dissolved gases (gases in metals and solutions) — **278**
15.2.2 Suction of dissolved gases (gases in metals and solutions) — **280**
15.3 Separations by one-sided repetition without auxiliary substance — **284**
15.3.1 Drying — **284**
15.3.2 Solvent evaporation – overhead distillation — **285**
15.3.3 Short path distillation — **287**
15.3.4 Microdiffusion — **288**
15.4 Separations by one-sided repetition with auxiliary substance — **290**
15.4.1 Distillation in the stream of a non-condensed gas: Gases in metals – expulsion of gases from solutions with an auxiliary gas – vacuum distillation — **290**
15.4.2 Distillation in the stream of a subsequently condensed gas (*codistillation*): Steam distillation – distillation from aqueous solutions – distillation in the vapor stream of organic auxiliary liquids — **292**
15.4.3 Azeotropic distillation — **296**
15.4.4 Closed loop procedure — **296**

15.5 Countercurrent method without auxiliary substance — **298**
15.5.1 General – use of boiling and equilibrium diagrams – theoretical bottoms (separation stages) – reflux ratio – operating contents — **298**
15.5.2 Determining the number of theoretical plates of a distillation column — **302**
15.5.3 Column types – return control – vacuum distillation – cryogenic distillation — **302**
15.6 Countercurrent method with auxiliary substance — **305**
15.6.1 Extractive distillation — **305**
15.6.2 Azeotropic distillation — **307**
15.6.3 Inserting auxiliary substances — **307**
15.7 Efficacy and scope of the method — **307**
General literature — **309**
More specific introductions — **309**
Literature to the text — **309**

16 Volatilization: Sublimation — 312
16.1 General — **312**
16.1.1 Historical — **312**
16.1.2 Definitions – p, T diagrams – auxiliary gases — **312**
16.2 Separations by one-sided repetition — **313**
16.2.1 Sublimation under normal pressure – vacuum sublimation – freeze drying — **313**
16.2.2 Fractionated sublimation – resublimation — **314**
16.2.3 Sublimation in the stream of an auxiliary gas – chlorination – evaporation analysis – pyrohydrolysis — **315**
16.2.4 Efficacy and scope of the method — **317**
General literature — **318**
Literature to the text — **318**

17 Condensation — 320
17.1 General — **320**
17.2 Separations by one-time equilibrium adjustment — **320**
17.2.1 Freezing out of a component from a static gas volume – fractional condensation — **320**
17.2.2 Condensation in the temperature gradient — **320**
17.2.3 Freezing out components from a gas stream — **322**
17.3 Systematic repetition of condensations — **322**
Literature to the text — **323**

Part III: Separations due to different migration rates in one phase

18 Introduction — 327

19 Migration of charge carriers in electric and magnetic fields (mass spectrometry) — 329
19.1 Historical development — **329**
19.2 General — **329**
19.2.1 Definitions — **329**
19.2.2 Principle structure of a mass spectrometer — **330**
19.2.3 Ionization process — **330**
19.2.4 Acceleration of ions in the electric field – energy dispersion — **334**
19.3 One-dimensional mass spectrometric separations (time-of-flight mass spectrometers) — **335**
19.4 Two-dimensional mass spectrometric separations — **337**
19.4.1 Separation of ion species in the magnetic sector field – single focusing mass spectrometers — **337**
19.4.2 Behavior of ion species in the electric sector field – double focusing mass spectrometers — **338**
19.4.3 Quadrupole mass spectrometer — **340**
19.4.4 Ion traps – mass spectrometry — **340**
19.4.5 Continuous mode of operation – differential mobility analyzer — **342**
19.4.6 Preparative mass spectrometry — **344**
19.5 Efficacy of the method – resolving power — **344**
General literature — **346**
Literature to the text — **347**

20 Migration of dissolved charge carriers in an electric field (electrophoresis; electrodialysis) — 350
20.1 Historical development — **350**
20.2 General — **350**
20.2.1 Definitions — **350**
20.2.2 Appearances during current passage through electrolytes (formation of interfaces – heat of current) — **350**
20.2.3 Ion migration in liquid phase – ion mobilities — **352**
20.3 One-dimensional electrophoretic separations without carriers (Tiselius method) — **357**
20.4 One-dimensional electrophoretic separations with carrier (carrier electrophoresis) — **359**

20.4.1 Carrier materials – special features of the use of carriers (adsorption – electroosmosis – suction flow – change in ion migration velocities – relative mobilities) — **359**
20.4.2 Column electrophoresis — **360**
20.4.3 Thin-layer methods – paper electrophoresis – high-voltage electrophoresis – micro- and ultramicro methods — **361**
20.5 Special effects with inhomogeneous separating zones — **362**
20.5.1 Interface stabilization according to Kendall — **363**
20.5.2 Zone sharpening – disc electrophoresis — **364**
20.5.3 Ion focusing — **369**
20.6 One-dimensional separations with semipermeable membrane (electrodialysis) — **370**
20.7 Countercurrent electrophoresis — **371**
20.8 Two-dimensional mode of operation — **371**
20.8.1 Overview — **371**
20.8.2 Procedure with uniform buffer solution — **372**
20.8.3 Immuno-electrophoresis — **373**
20.9 Efficacy and scope of the method — **374**
General literature — **376**
Literature to the text — **376**

21 Migration of particles in the concentration gradient (diffusion) — 378
21.1 Historical development — **378**
21.2 General — **378**
21.2.1 Definitions — **378**
21.2.2 Fick's law — **378**
21.2.3 Membranes — **379**
21.3 One-dimensional separations by diffusion — **381**
21.3.1 Separations in the gas phase — **381**
21.3.2 Separations in liquid phase (dialysis) — **382**
21.4 Pervaporation — **383**
21.5 Countercurrent method — **384**
21.6 Two-dimensional separations by diffusion — **384**
21.7 Efficacy and scope of the method — **390**
General literature — **390**
Literature to the text — **391**

22 Migration of particles in the gravitational field (sedimentation – flotation) — 393
22.1 General – definitions – centrifugal force — **393**
22.2 Separations using heavy liquids — **394**

22.3 Separations by sedimentation in the gravitational field of the earth — **394**
22.4 Separations with the aid of the ultracentrifuge — **394**
22.5 Efficacy and scope of the method — **395**
General literature — **396**
Literature to the text — **397**

23 Separation of particles in the crossed force field — 399
23.1 General – definitions – asymmetric field-flow fractionation – applications — **399**

Index — 403
