1 General overview of biopolymers: structure and properties — 1

- 1.1 Introduction — 1
- 1.2 Classes of biopolymers — 2
 - 1.2.1 Biopolymers of animal origin and their applications — 4
 - 1.2.2 Biopolymers of plant origin and their applications — 6
 - 1.2.3 Biopolymers of microbial origin and their applications — 8
- 1.3 Structure of biopolymers — 11
 - 1.3.1 Bead model of biopolymers — 11
 - 1.3.2 Electronic structure — 12
 - 1.3.3 Molecular structure — 13
 - 1.3.4 Photonic structure — 14
- 1.4 Properties of biopolymers and biopolymer composites — 15
 - 1.4.1 Brittleness and ductility properties — 16
 - 1.4.2 Characteristic temperature/Thermal properties — 17
 - 1.4.3 Chemical properties — 17
 - 1.4.4 Creep and fatigue properties — 18
 - 1.4.5 Dynamic mechanical thermal properties — 18
 - 1.4.6 Fibre mechanical properties — 18
 - 1.4.7 Flexural properties dynamic mechanical thermal properties — 18
 - 1.4.8 Impact properties — 19
 - 1.4.9 Physical properties — 19
 - 1.4.10 Tensile properties — 20
 - 1.4.11 Toughness and hardness properties — 20
 - 1.4.12 Tribological properties — 20
- 1.5 Conclusions — 22
- References — 23

2 Progress and prospects of biopolymers production strategies — 29

- 2.1 Introduction — 29
 - 2.1.1 Bibliometric analysis — 31
- 2.2 Production of biopolymers from algae — 32
 - 2.2.1 Solvent extraction of biopolymer — 34
 - 2.2.2 Biopolymer production using ultrasound extraction (UBE) — 35

2.2.3	Microwave-assisted extraction (MAE) of biopolymer —	36
2.2.4	Subcritical water extraction (SCWE) of biopolymer —	37
2.3	Polymers produced by bacteria —	38
2.3.1	Biosynthesis of bacterial polyhydroxyalkanoates (PHA) —	39
2.3.2	Bacterial cellulose (BCs) —	41
2.3.3	Bacterial production and recovery of hybrid biopolymers —	42
2.4	Other strategies for biopolymers production —	43
2.5	Synthetic biology strategies for biopolymer synthesis —	44
2.6	Prospects and conclusion —	47
	References —	48

3 Modern analytical approach in biopolymer characterization — 55

3.1	Introduction —	56
3.2	Bibliographic study —	57
3.3	Characterization of biopolymers —	59
3.4	Microscopy methods —	61
3.4.1	Optical microscopy —	62
3.4.2	Laser scanning confocal microscopy (LCSM) —	62
3.4.3	Electron microscopy —	62
3.4.4	STM (scanning tunneling microscope) and SPM (scanning probe microscopy) —	64
3.4.5	Differential dynamic microscopy (DDM) —	65
3.5	Spectroscopy methods for characterizing biopolymers —	66
3.5.1	X-ray diffraction analysis (XRD) —	66
3.5.2	Fourier transform-infrared spectroscopy (FTIR) —	67
3.5.3	Raman spectroscopy —	68
3.6	Recent research on biopolymers characterization by analytical techniques —	68
3.7	Conclusions —	71
	References —	72

4 Biodegradable polymers – research and applications — 77

4.1	Introduction —	78
4.2	Biodegradable versus non-biodegradable polymers —	79
4.2.1	Commercially available important biodegradable polymers based on their market value and properties —	80
4.3	Methods and the factors affecting biodegradation of the polymers —	84

4.4	Recent market trends and challenges for biodegradable polymers production —	85
4.5	Industrial production status and commercialized products —	88
4.6	Metabolic engineering tools to increase the production of biodegradable polymers —	90
4.7	Recent applications of the biodegradable polymers —	92
4.7.1	Application in packaging industry —	92
4.7.2	Application in the electronics industry —	93
4.7.3	Application in agriculture industry —	93
4.7.4	Application in automotive industry —	94
4.7.5	Application in biomedical industry —	95
4.7.6	Application in field of aquaculture —	95
4.7.7	Application in construction industry —	96
4.8	Conclusions —	96
	References —	97

Suresh Babu Palanisamy

5	Biopolymers as a versatile tool with special emphasis on environmental application —	101
5.1	Introduction —	101
5.2	Synthesis and characterization of biopolymer composites —	103
5.3	Environmental application of biopolymers and biopolymer composites —	105
5.3.1	Hazardous contaminants removal —	106
5.3.2	Water/wastewater treatment —	106
5.3.3	Biopolymer (nano) composites —	109
5.3.4	Bio-energy —	110
5.3.5	Cost analysis —	113
5.4	Future prospects —	113
5.5	Conclusions —	114
