Foreword — VII

Notes to the reader — IX

1 Sequences in $\mathbb{R}$ — 1

- 1.1 Convergent sequences — 2
- 1.2 Computing sequence limits — 7
 - 1.2.1 Two famous limits — 9
- 1.3 Divergence to infinity — 11
- 1.4 Convergence implications: sequence convergence theorems — 12
 - 1.4.1 Limit uniqueness — 12
 - 1.4.2 Sandwich theorem — 13
 - 1.4.3 Sequence ratio test — 14
- 1.5 Limit operations — 17
- 1.6 Subsequences — 18
- 1.7 Recognizing sequences — 20
- 1.8 Cauchy sequences, Cauchy convergence — 21

2 The real numbers, $\mathbb{R}$ — 26

- 2.1 Axioms of the real numbers — 26
- 2.2 Completeness and the least upper bound — 29
- 2.3 How many reals are there? — 32
- 2.4 A bit of logic — 36

3 Infinite series in $\mathbb{R}$ — 41

- 3.1 Harmonic series — 41
- 3.2 Geometric series — 43
- 3.3 Convergence tests — 46
 - 3.3.1 Test 1: n -th term test — 46
 - 3.3.2 Test 2: alternating series test — 47
 - 3.3.3 Test 3: comparison tests — 51
 - 3.3.4 Test 4: integral test — 54
 - 3.3.5 Test 5: ratio test — 59
 - 3.3.6 Test 6: root test — 61
- 3.4 Regrouping and reordering series — 62

4 Sequences and series of functions — 71

- 4.1 Pointwise versus uniform convergence — 71
- 4.2 Implications of uniform convergence — 76
- 4.3 Power series — 80

XII — Contents

4.4	Calculus on power series —	83
4.5	Taylor series —	85
4.5.1	Six standard series —	88
4.6	Taylor theorem —	91
4.7	Limitations of analyticity —	94
5	Improper Riemann integrals —	101
5.1	Improper integrals of the first kind —	101
5.1.1	Natural logarithm —	103
5.1.2	Area representation —	104
5.1.3	Integration by parts —	106
5.2	Improper integrals of the second kind —	109
5.2.1	Partial fractions —	112

Bibliography — 117

Index — 119
