

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Problem Statement	4
1.3	Concept of Multi-functional Power Electronic System	5
2	State of the Art	9
2.1	Mechanical Drive Train System	9
2.2	Grid Side Connection	12
2.3	Load Side Inverter Control	15
2.4	Energy Storage System	19
3	Mechanical Drive Train System	21
3.1	The Elevator System	22
3.1.1	Derivation of the Discrete Structural Model	22
3.1.2	Dimensioning of the Mechanical Part of the Elevator System	27
3.2	The Electromechanical Converter	36
3.2.1	Analytical Description of the PMSM	39
3.2.2	Machine Dimensioning	42
4	Grid State Influence	47
4.1	Influence of the Grid Status on Electromechanical Converters	49
4.1.1	Imbalance	49
4.1.2	Harmonic Distortion	49
4.1.3	Reclosing Processes	50
4.1.4	Voltage Incidents	51
4.1.5	Grid Impedance and Dynamic Load	52

4.1.6	Energy Recovery	52
4.2	Characterisation of Grid Supply Issues	53
4.3	Decoupling of the Grid and the Electromechanical Converter	54
4.3.1	Reactive Current Control	55
4.3.2	Active Power Feeding	56
4.3.3	Uninterruptable Power Supply	57
5	Power Electronic System	59
5.1	Converter Topology	61
5.2	Grid-Side Inverter	65
5.2.1	Pulse Modulation Strategy for the Grid-Side Inverter	67
5.2.2	Dynamic Level Control	98
5.3	Load Side Inverter	106
5.3.1	Comparison of Pulsing Methods	107
5.3.2	Essentials for the Load-Side Pulse Modulation Strategies	122
5.3.3	Establishing the Direct Torque Hysteresis Controller	128
5.3.4	Control-Structure	143
5.3.5	Simulation Results	143
5.4	Power-Link Energy Storage	148
5.4.1	Designing the Energy Storage System	149
5.4.2	Battery Management System	160
5.4.3	Resulting Requirements for the Drive Train System's Elements	172
6	Multi-Functional Application and Potential System Enhancements	179
6.1	Variable Power-Link Voltage	179
6.1.1	Constant Switching Frequency	179
6.1.2	Hybrid Energy Storage System - Directly Connected Battery System	182
6.1.3	Capacitive Grid Connection	200

6.2	Hysteresis Control in a Rotating Reference Frame	201
6.2.1	Flux Based Hysteresis Control	201
6.2.2	Direct Torque Hysteresis Control for an iPMSM	202
6.3	Battery Balancing for Large Scale Battery Systems	220
6.3.1	Flying Inductor Balancing System	220
7	Résumé	225
7.1	Summary	225
7.2	Conclusions	230
	List of Figures	233
	List of Tables	239
	Bibliography	241
	Author Bibliography	271
	Unpublished Bibliography	283
