

Table of Contents

1	Introduction	1
2	Fundamentals and state of the art	5
2.1	Polypropylene and methods to hydrophilize polypropylene	5
2.1.1	Polypropylene surface properties and modification methods	5
2.1.2	Applications of hydrophilic polypropylene	8
2.2	Crystallization and morphology development in polypropylene	9
2.3	(Surface) migration of additives in polymers	10
2.3.1	Surface segregation of additives	13
2.3.2	Miscibility and solubility	15
2.3.3	Diffusion	18
2.3.4	Surface modification of polyolefins with melt additives	22
3	Motivation, aims and strategy of this work	25
4	Experimental	29
4.1	Sample preparation	29
4.1.1	Masterbatch preparation and melt blending	29
4.1.2	Fiber spinning and nonwoven production	30
4.1.3	Cast film extrusion and film stretching	32
4.1.4	Injection molding	33
4.1.5	Spin coating of injection molded plates	34
4.1.6	Coating of nonwovens	34
4.2	Characterization methods	35
4.2.1	Wetting tests	35
4.2.2	X-Ray diffraction (XRD)	38
4.2.3	Fourier-transform infrared spectroscopy (FTIR)	41
4.2.4	Thermogravimetric analysis (TGA)	52
4.2.5	Differential scanning calorimetry (DSC)	52
4.2.6	Gel permeation chromatography (GPC)	52
4.2.7	Microscopy	53
5	Materials	55
5.1	Polypropylene	55
5.2	Potential melt additives	55
6	Results and discussion	61
6.1	Raw material characterization	61
6.1.1	Matrix polymers	61
6.1.2	Additives	62

6.2	Degradation of matrix polymer and additives	65
6.2.1	Degradation of matrix polymer	65
6.2.2	Degradation of additives during the process	66
6.3	Miscibility of additives in the polypropylene matrix	70
6.4	Morphology development of fibers in the spinning process and its influence on additive migration	73
6.4.1	Structure formation during the stretching process	73
6.4.2	Calendering	82
6.5	Morphology development in cast films	85
6.6	Morphology development in injection molded plates	91
6.7	Wetting behavior of additives applied as a coating	93
6.7.1	Wetting behavior of spincoated substrates	93
6.7.2	Wetting behavior of coated nonwovens	101
6.8	Preliminary study on the wetting behavior of nonwovens and single fibers with melt additive	104
6.8.1	Wetting and migration behavior of single fibers	105
6.8.2	Wetting and migration behavior of nonwovens	108
6.9	Surface migration of additives in injection molded plates	110
6.9.1	Influence of surface crystallinity and morphology	110
6.9.2	Influence of storage temperature and time	113
6.9.3	Influence of additive molecular structure	119
6.9.4	Influence of matrix molar mass and nucleating agents	124
6.10	Surface migration of additives in cast and stretched films	127
6.11	Surface migration of additives in fibers and nonwovens	133
6.11.1	Influence of production parameters in the spinning process	134
6.11.2	Influence of the molecular architecture of the additive	146
6.11.3	Influence of storage temperature	148
6.11.4	Influence of the molar mass of the matrix polymer	150
6.11.5	Influence of nucleating agents	157
6.12	Additive concentration profile and enrichment towards the surface	161
6.13	Advantages of additives applied as a melt additive	167
6.13.1	Subsequent activation methods	168
6.13.2	Permanence and durability	174
7	Summary and Outlook	179
8	Zusammenfassung und Ausblick	187
A	Supplementary information and graphics	195
A.1	Fundamentals	195
A.1.1	Diffusion	195

A.2	Experimental	198
A.2.1	Fiber spinning	198
A.2.2	Calibration procedure for the determination of the degree of crystallinity	199
A.3	Raw material characterization	200
A.3.1	Polypropylene	200
A.3.2	Additives	201
A.4	Degradation of matrix polymer and additives	205
A.5	Miscibility of additives in the polypropylene matrix	206
A.6	Wetting behavior of additives applied as a coating	208
A.7	Preliminary study on the wetting behavior of nonwovens	209
A.8	Surface migration of additives in injection molded plates	210
A.9	Surface migration of additives in fibers and nonwovens	211
A.9.1	Influence of cooling profile and temperature	211
A.9.2	Influence of storage temperature	215
A.10	Additive concentration profiles and enrichment towards the surface	218
A.10.1	Model to describe surface concentration of fibers	219
A.11	Advantages of additives applied as a melt additive	221
A.11.1	Additive surface distribution	221
A.11.2	Subsequent activation methods	222
	Bibliography	223
