Section I Introduction 1

- 1 **The Role of Batteries for the Successful Transition to Renewable Energy Sources 3**
Dominic Bresser, Arianna Moretti, Alberto Varzi, and Stefano Passerini
 - 1 The Need for Transitioning to Renewable Energy Sources 3
 - 2 Energy Storage as Key Enabler 5
 - 2.1 Stationary Energy Storage 5
 - 2.2 Energy Storage Technologies for Transportation 7
 - 2.3 Storage Technologies for Portable Electronic Devices 8
 - 3 The Variety of Battery Chemistries and Technologies 9
 - References 10
- 2 **Fundamental Principles of Battery Electrochemistry 13**
Francesco Nobili and Roberto Marassi
 - 1 Introduction 13
 - 2 Main Battery Components 16
 - 2.1 Electrodes 16
 - 2.2 Electrolyte 17
 - 3 Voltage, Capacity, and Energy 19
 - 3.1 Theoretical Cell Voltage 19
 - 3.2 Theoretical Capacity 23
 - 3.3 Energy Storage and Delivery 26
 - 4 Current and Power 29
 - 4.1 Kinetics and Overvoltage 29
 - 4.2 Ohmic Polarization 31
 - 4.3 Kinetic Polarization 31
 - 4.4 Mass Transfer Polarization 32
 - 5 Practical Operating Parameters 35

5.1	Coulombic Efficiency and Energy Efficiency (Round-Trip Efficiency)	35
5.2	Capacity Retention and Cycle Life	36
5.3	Rate Capability	37
6	Main Classes of Batteries and Alternative Electrochemical Power Sources	37
6.1	Primary Batteries	38
6.1.1	Volta's Pile	39
6.1.2	Daniell Cell	39
6.1.3	Leclanché Cell	39
6.1.4	Alkaline Batteries	40
6.1.5	Li Primary Batteries	40
6.2	Secondary Batteries (Accumulators)	41
6.2.1	Lead-Acid Batteries	42
6.2.2	Nickel-Cadmium Batteries	42
6.2.3	Ni-Metal-Hydride Batteries	42
6.2.4	Lithium-Ion Batteries	43
6.2.5	Redox Flow Batteries	44
6.3	Fuel Cells	44
6.3.1	Alkaline Fuel Cells (AFCs)	45
6.3.2	Polymer Electrolyte Membrane Fuel Cells (PEMFCs)	45
6.3.3	Direct Methanol Fuel Cells (DMFCs)	45
6.3.4	Phosphoric Acid Fuel Cells (PAFCs)	46
6.3.5	Molten Carbonate Fuel Cells (MCFCs)	46
6.3.6	Solid Oxide Fuel Cells (SOFCs)	46
