

Table of Contents

Inhaltsverzeichnis

1	Introduction.....	1
2	State of the art in research and industry	5
2.1	Solid Forward Extrusion	5
2.1.1	Basic Principle and Applications	5
2.1.2	Basics of a Tribological System	10
2.1.3	Friction Models and Friction Testing Methods.....	12
2.1.4	Tribological System in Forward Extrusion	21
2.1.5	Intermediate Conclusion	27
2.2	Dry Metal Forming Processes.....	27
2.2.1	Dry Sheet Metal Forming	28
2.2.2	Dry Bulk Metal Forming Processes.....	30
2.2.3	Intermediate Conclusion	31
2.3	Surface Integrity and Self-Lubricating Coatings	32
2.3.1	Definition of Surface Integrity and Surface Integrity of Workpieces and Tools.....	32
2.3.2	PVD - Coating Processes	34
2.3.3	Intermediate Conclusion	35
2.4	Conclusion of the State of the Art.....	36
3	Objective and Research Methodology.....	39
4	Influences of Textured Workpieces on Shear Friction Stress	43
4.1	Surface Texturing Methods for Workpieces	44
4.1.1	Set-up for Surface Texturing	45
4.1.2	Parameter Study and Evaluation regarding Surface Properties.....	46
4.2	Experimental Set-Up of the Tribometer.....	49
4.2.1	Mode of Action of Pin-on-Cylinder-Tribometer	49
4.2.2	Metrological Design and Evaluation Variables	50
4.3	Surface Integrities of textured workpiece surfaces.....	52
4.3.1	Residual Stress Measurements of Surface Textures	52
4.3.2	Hardness Measurement on Textured Surfaces.....	55
4.3.3	Leveling Mechanism of Surface Textures	56
4.3.4	Deduction of a Leveling Factor.....	58
4.3.5	Intermediate Conclusion	61
4.4	Analysis of Interactions between Surface Integrities and Friction Shear Stress.....	61
4.4.1	Friction Shear Stress under Low Loads	61
4.4.2	Friction Shear Stress under High Loads	63
4.4.3	Numerical FE-Process-Simulation of Tribometer Testings....	66

4.4.4	Friction Analysis by means of Ring Compression Tests	71
4.5	Intermediate Conclusion.....	76
5	Self-Lubricating Tool Coating for Dry Full Forward Extrusion	77
5.1	Definition of a Self-Lubricating Coating	77
5.2	Experimental Coating Process Set-Up and Mechanical Properties.....	78
5.2.1	Analysis of the Influence of Coatings on the Friction Shear Stress under Consideration of Surface Textures.....	79
5.2.2	Pin-on-cylinder Tribometer tests under elevated temperatures	81
5.3	Intermediate Conclusion.....	84
6	Deduction of a Friction Model for a dry Full Forward Extrusion Process.....	87
6.1	Experimental Investigation of a Dry Full Forward Extrusion Process	87
6.1.1	Full Forward Extrusion Process Set-Up	87
6.1.2	Characterization of Extrusion Dies	90
6.1.3	Extrusion Process Analysis regarding Extrusion Force.....	91
6.1.4	Experimental Evaluation by means of DOE	97
6.1.5	Process Evaluation by means of Viscoplasticity.....	101
6.2	Numerical FE-Process Model of the Full Forward Extrusion Process	104
6.2.1	Full Forward Extrusion FE-Model Set-Up.....	105
6.2.2	FE-Model Validation by means of Geometry and Process Force.....	106
6.3	Explanatory Friction Model for Forward Extrusion.....	107
6.3.1	Application of HILD'S Friction Model for Different Surface Textures	107
6.3.2	Influence of Hild's Friction Model on True Strain in Comparison with Viscoplasticity	112
6.4	Intermediate Conclusion.....	113
7	Wear Modelling in a Dry Full Forward Extrusion Process	115
7.1	Experimental Wear Investigations.....	115
7.1.1	Force Evaluation in Dependency of Wear.....	115
7.1.2	Wear Influence on Workpiece Quality	118
7.1.3	Tool Wear in Dry Full Forward Extrusion	120
7.2	Expansion of Forward Extrusion Model by Wear	123
7.3	Model Validation and Model Perspective	125
7.4	Intermediate Conclusion.....	126
8	Summary and Outlook	129
	Bibliography.....	XI
	Appendix	XXIII
