Foreword	vii
Preface	ix
List of figures	xix
List of tables	xxiii
1 Introduction: The neglected role of customization for software product management	1
1.1 The business of software	1
1.1.1 Tailor-made and software product development	3
1.1.2 The role of software customization in the software business	7
1.1.3 Managing software product development	10
1.1.3.1 Terms and definitions	11
1.1.3.2 The role of the product manager	14
1.1.3.3 Software product management artifacts, stakeholders and core competences	16
1.1.3.4 Software product management within the company	22

1.2	Research relevance, research aim, and research questions . . .	26
1.3	Anchoring in the philosophy of science	28
1.4	Research design and dissertation outline	33
1.4.1	Research design	33
1.4.2	Dissertation outline	34
2	Literature review: Software customization in the information systems literature	41
2.1	Introduction	41
2.2	Concepts of customization	43
2.2.1	Existing concepts of customization	43
2.2.2	Software customization - a working definition	48
2.3	Systematic literature analysis	50
2.4	The duality of software customization in IS research	55
2.4.1	Customization as a form of product delivery	55
2.4.2	Customization as a form of co-creation of value	58
2.5	The reciprocal nature of software customization	58
2.6	Summary	63
3	Theoretical foundation: The resource-based view (RBV) of the firm	67
3.1	Origins and development of the RBV	68
3.1.1	Introduction stage: Conceptual foundation of the RBV . . .	69
3.1.2	Growth stage: Characteristics of resources and capabilities .	75
3.1.3	Maturity stage: From a view to a theory of the firm	79

3.2	Theoretical extensions of the RBV	82
3.2.1	The knowledge-based view (KBV) of the firm	82
3.2.2	High-velocity environments and dynamic capabilities	86
3.2.3	Firm-level value creation and capture	90
3.3	The RBV as a complement to the theory of the firm	94
3.4	Challenges of applying the RBV	98
3.5	Summary and theoretical lens	102
4	Qualitative investigation I: Exploring software customization from the vendors' and customers' perspectives	103
4.1	Empirical setting and data collection	105
4.1.1	Sample characteristics	106
4.1.2	Interview guide	109
4.2	Data analysis and interpretation	112
4.2.1	Analytical lens	112
4.2.2	Coding cycles	114
4.2.3	Descriptive results	116
4.2.3.1	First and second coding cycle	117
4.2.3.2	Third coding cycle	117
4.3	Findings and discussion	121
4.3.1	Strategic resources for software customization	121
4.3.1.1	Customer business and market knowledge	121
4.3.1.2	Customization management knowledge and experience data	126
4.3.1.3	Product functionality and flexibility	128

4.3.1.4	Product related software development assets	130
4.3.2	Distinctive capabilities for software customization	131
4.3.2.1	Business analysis and interpretation capabilities	131
4.3.2.2	Customer integration and expectation management	133
4.3.2.3	Requirements management and negotiation capability	134
4.3.2.4	Future-proof solution design	134
4.3.2.5	Solution deployment and initialization	135
4.3.2.6	Solution adjustment capability	136
4.3.2.7	Typology of customization capabilities	136
4.3.3	Values from software customization	138
4.3.3.1	Use value in software customization	138
4.3.3.2	Exchange value in software customization	145
4.4	Summary and discussion	154
5	Qualitative investigation II: Elaborating the strategic role of customization for software product development	157
5.1	Empirical setting and data collection	158
5.1.1	Site description	159
5.1.1.1	Company Alpha	160
5.1.1.2	Company Beta	162
5.1.2	Primary and secondary data	166
5.1.3	Interview guide	167
5.2	Data analysis and interpretation	171
5.2.1	Analytical lens and coding approach	171

5.2.2	Descriptive results	174
5.3	Findings and discussion	178
5.3.1	Cases' product and customization characteristics	178
5.3.1.1	Company Alpha	178
5.3.1.2	Company Beta	183
5.3.2	Overall conceptual framework	188
5.3.3	Sensing capability	188
5.3.3.1	Collect, structure and store customer requests	190
5.3.3.2	Evaluate customer requests	193
5.3.3.3	Consolidate customer impulses from the existing installed base	195
5.3.3.4	Consolidate additional perspectives on customer impulses	198
5.3.4	Seizing capability	202
5.3.4.1	Provide multiple revenue models for software feature im- plementation	203
5.3.4.2	Maintain standardized product architecture and develop- ment infrastructure	205
5.3.4.3	Maintain a standardized and revisable communication in- frastructure	208
5.3.4.4	Maintain a standardized and automatized release infras- tructure	210
5.3.5	Reconfiguration capability	214
5.3.5.1	Modularize product and service features	215
5.3.5.2	Standardize customer solutions	217

5.3.5.3	Maintain knowledge base on customer, market and internal requests	219
5.3.5.4	Evaluate and adapt internal processes and business models	221
5.4	Project typology in the hybrid software business	225
5.4.1	Solution delivery projects (SDP)	227
5.4.2	Business support projects (BSP)	229
5.4.3	Technology support projects (TSP)	230
5.4.4	Undefined projects (UP)	231
5.5	Research quality and evaluation	232
5.6	Summary and discussion	233
6	Conclusion: Summary, contributions and implications, limitations and outlook	235
6.1	Summary of research and contributions	235
6.1.1	Research motivation and approach	235
6.1.2	Contributions	240
6.1.2.1	Customization framework	242
6.1.2.2	Productization framework	243
6.1.2.3	Integrated framework and project types	245
6.2	Implications for management and theory	246
6.2.1	Theoretical implications	246
6.2.2	Managerial implications	249
